Suzuki-Miyaura reaction between bromobenzene with phenylboronic acid catalyzed by Bionano hybrid. Bromobenzene (0.05 mmol) was added to a 1.5 mL screw-sealed vessel containing phenylboronic acid (0.055 mmol), NaOH (1.5 eq) and TBACl (0.0165 mmol) in distilled water: methanol (1:1) (1 mL). The mixture was kept at 50 °C under vigorous magnetic stirring for 5 min. After that, to initialize the reaction, the aqueous suspension of the GTL σ -A193Cp-PdNPs (1 mg; 0.4 mg of Pd) was added. The final suspension was left under vigorous magnetic stirring at 50°C for 24 h. The reaction outgoing was monitored by HPLC analysis of the reaction's samples withdrawn at different times. The analysis conditions were performed with a Kromasil-C4 (150 \times 4.6 mm and 5 μ m \emptyset), at a flow of 1.5 mL / min; λ : 254 nm; and a mobile phase: 50% (v/v) ACN in MilliQ water. The R_t of biaryl product was corroborated using standard products.

Sonogashira reaction between iodoanisole and propargyl alcohol catalyzed by Bionanohybrid. Iodoanisole (47 mg, 1 equiv) was added to a 3.5 mL screw-sealed vessel containing 15 μ L of propargyl alcohol (1.3 equiv) and 2 mg of CuI (0.05 equiv.) in 1.5 mL of thiethylamine. The mixture was kept at room temperature under vigorous magnetic stirring for 5 min. After that, to initialize the reaction, GTL σ -A193Cp-PdNPs (7 mg, 3 mg of Pd) was added. The final suspension was left under vigorous magnetic stirring at room temperature for 24 h. The reaction outgoing was monitored by TLC. The R_t was corroborated are and agree with Belot, A. et al (*Angew. Chem. Int. Ed.* **2009**, 48 , 8923).

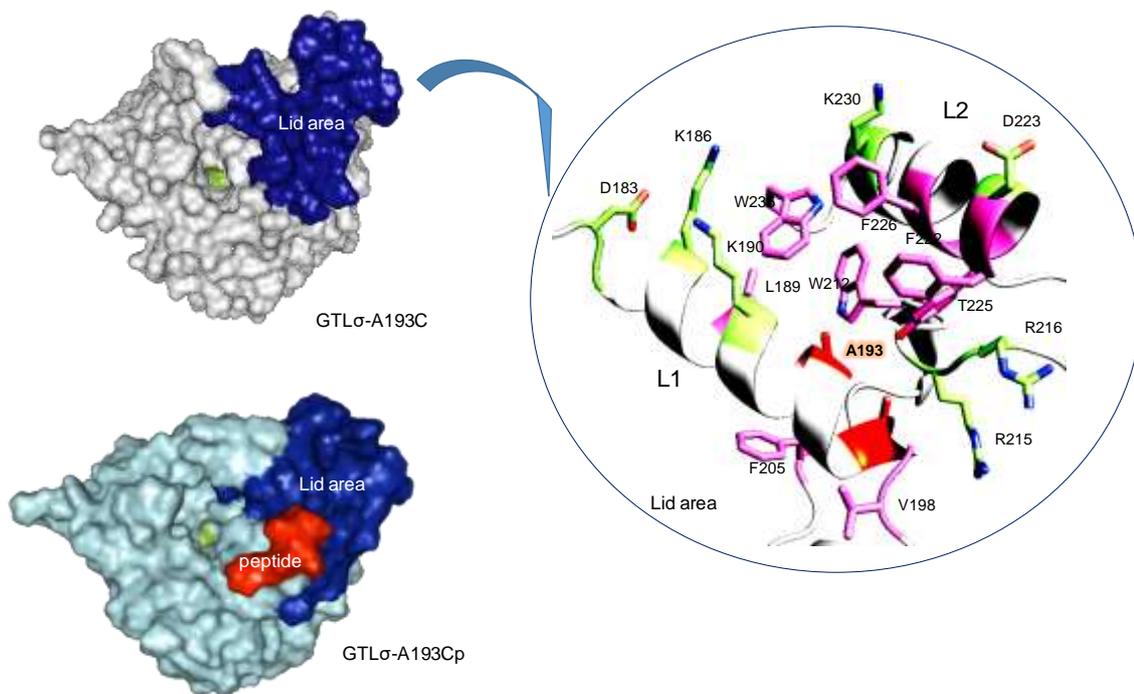

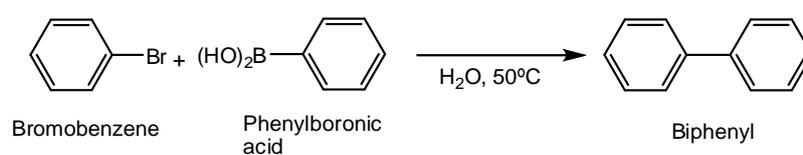

Figure S1. Crystal structure of GTL native and modified together with the lid area marked key amino acids. The structure was obtained from the PDB (ID: 2W22), and the picture was created by using PyMOL v. 0.99.

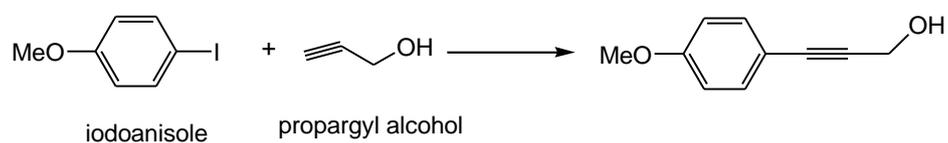

Table S1. Suzuki-Miyaura cross coupling of bromobenzene (BB) with phenylboronic acid (PBA) catalyzed by bionanohybrid.

Catalyst	Conversion (%)^a	TON	TOF (h⁻¹)
GTL σ -A193Cp-PdNPs	62	10.33	0.43

^aReaction conditions: BB (0.05 mmol), PBA (0.055 mmol), H₂O/MeOH 50/50 (1 mL), TBACl(0.0165 mmol), 1 mg nanohybrid, 50°C, 24 h

Table S2. Suzuki-Miyaura cross coupling of bromobenzene (BB) with phenylboronic acid (PBA) catalyzed by bionanohybrid.

Catalyst	Conversion (%) ^b
GTLσ-A193Cp-PdNPs	10

^aReaction conditions: Iodoanisole (47 mg, 1 equiv), propargyl alcohol (15 μL, 1.3 equiv), CuI (0.2 mg, 0.05 equiv), thiethylamine (1.5 mL), 7 mg nanohybrid, r.t., 24 h
