Figure S1a

Figure S1b

**Supplementary Figure S1.** Thermal effects of ciprofloxacin-cafeine (a) and tetracycline-cafeine (b) interactions; circles, titration of cafeine with buffer; squares, titration of cafeine with antibiotic; triangles, titration of buffer with antibiotic. The net heat of antibiotic-cafeine interaction, calculated as the difference between heat of antibiotic-cafeine titration and control (buffer) titrations, is marked with crosses. CIP, ciprofloxacin. TET, tetracycline
