

Photocatalytic degradation of single and binary mixture of brilliant green and rhodamine B dyes by zinc sulphide quantum dots

Peter A. Ajibade* and Abimbola E. Oluwalana

School of Chemistry and Physics, University of KwaZulu-Natal, Private Bag, Scottsville, Pietermaritzburg 3209,
South Africa

Supplementary Information

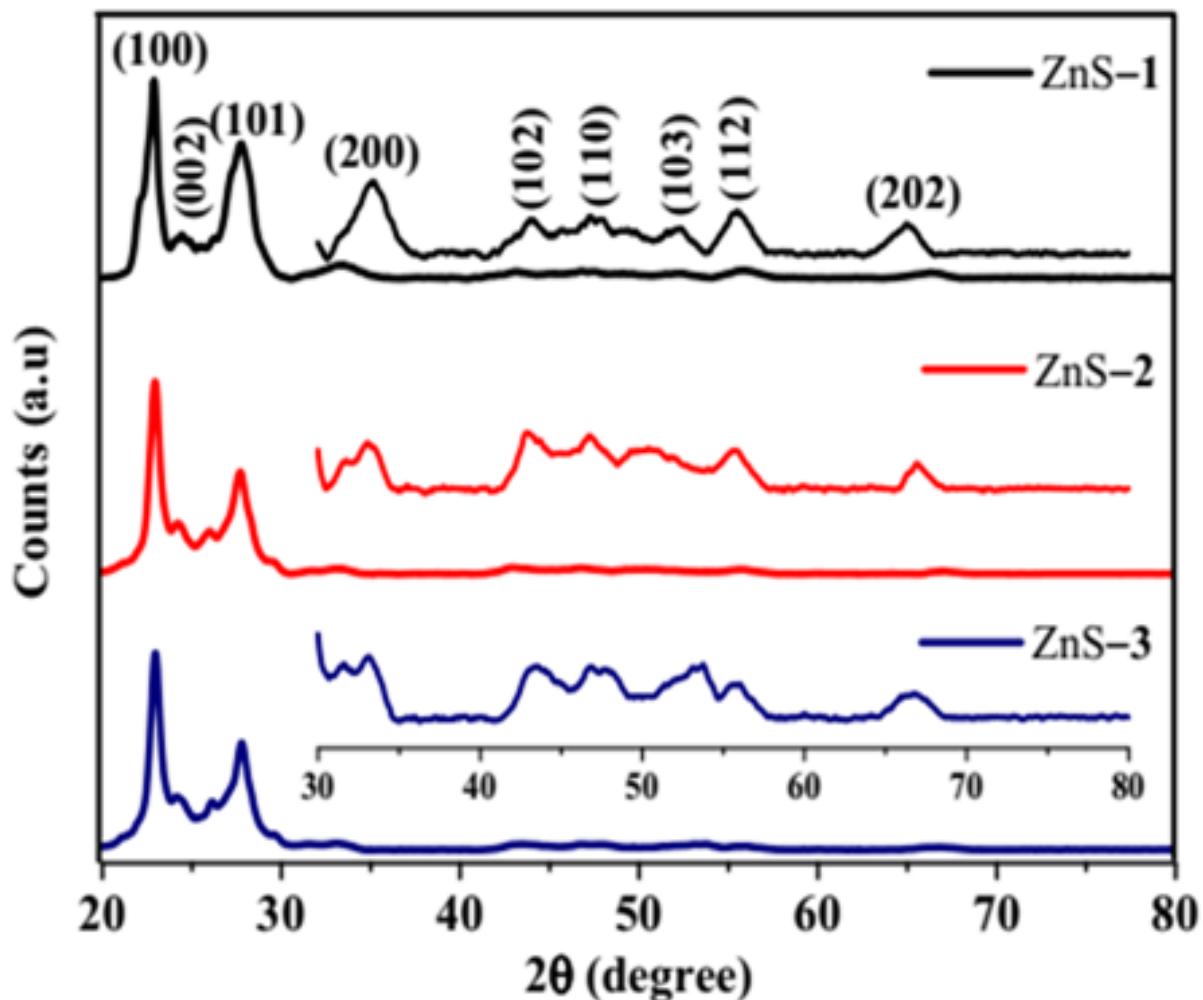

Figure S1: Powder X-ray diffraction patterns of ZnS quantum dots prepared at 30 min (ZnS-1), 1 h (ZnS-2) and 2 h (ZnS-3)

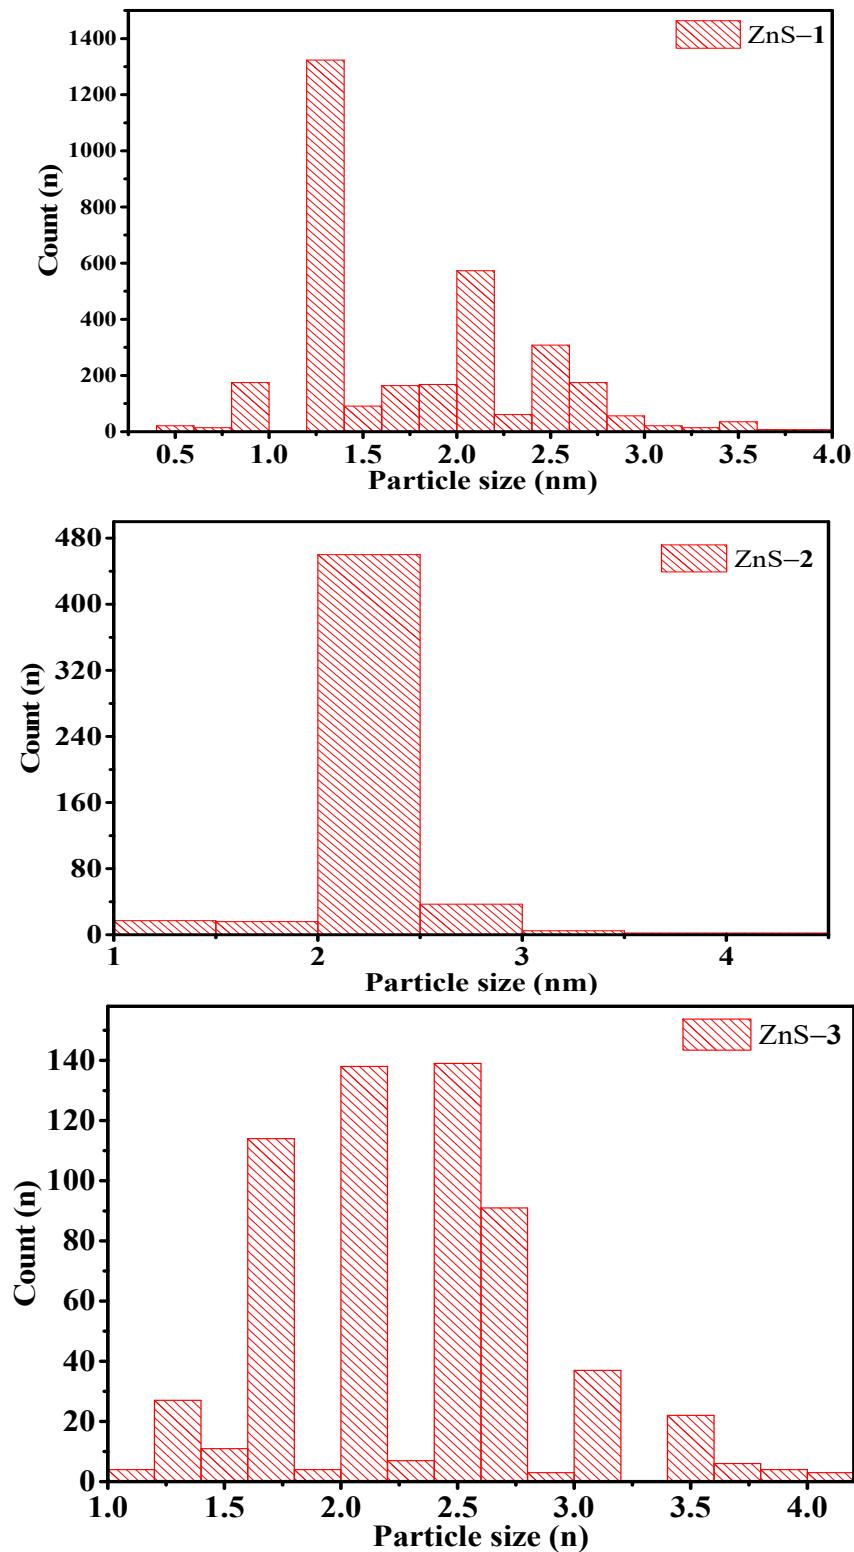

Figure S2: Particle size distributions of the ZnS nanoparticles

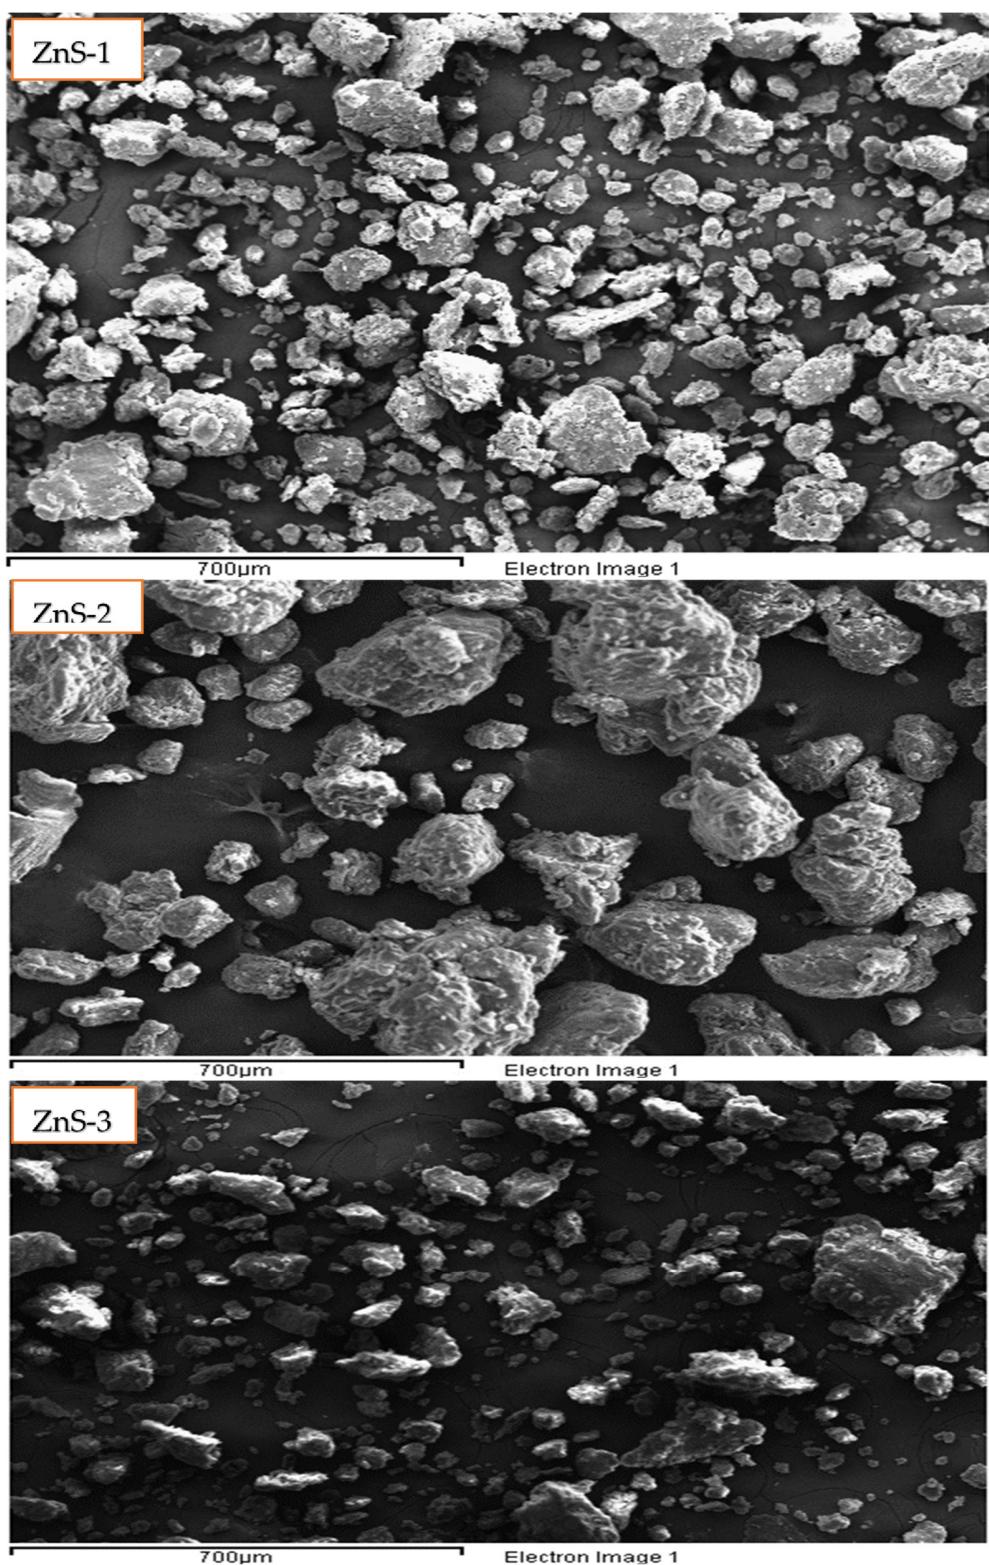

Figure S3: SEM images of the ZnS quantum dots

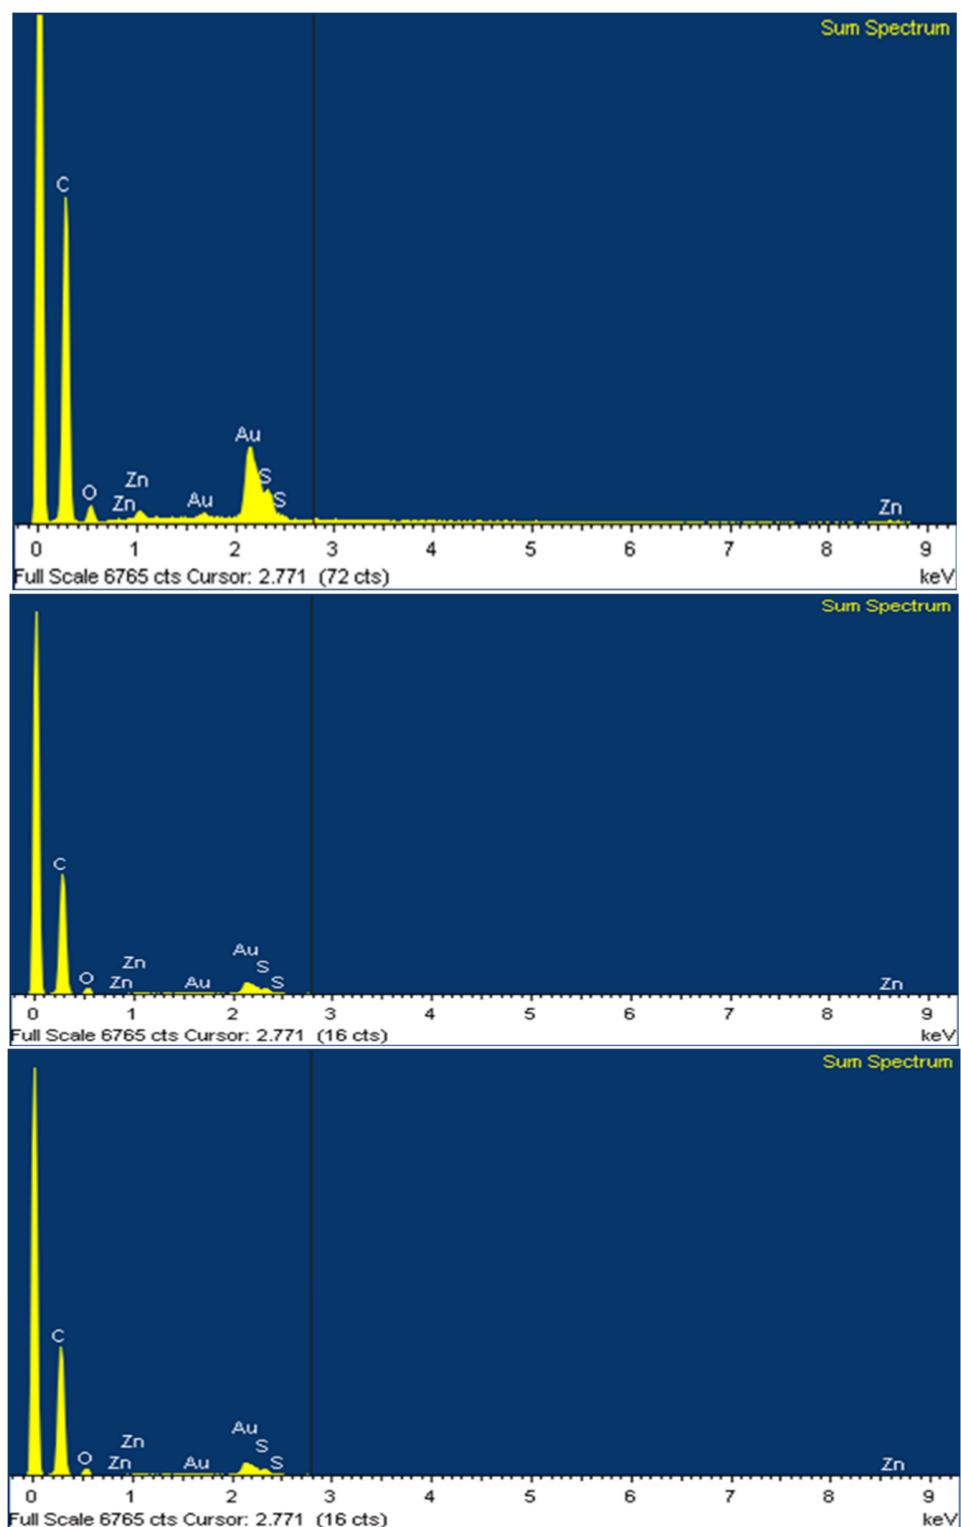

Figure S4: EDX spectra of the ZnS quantum dots

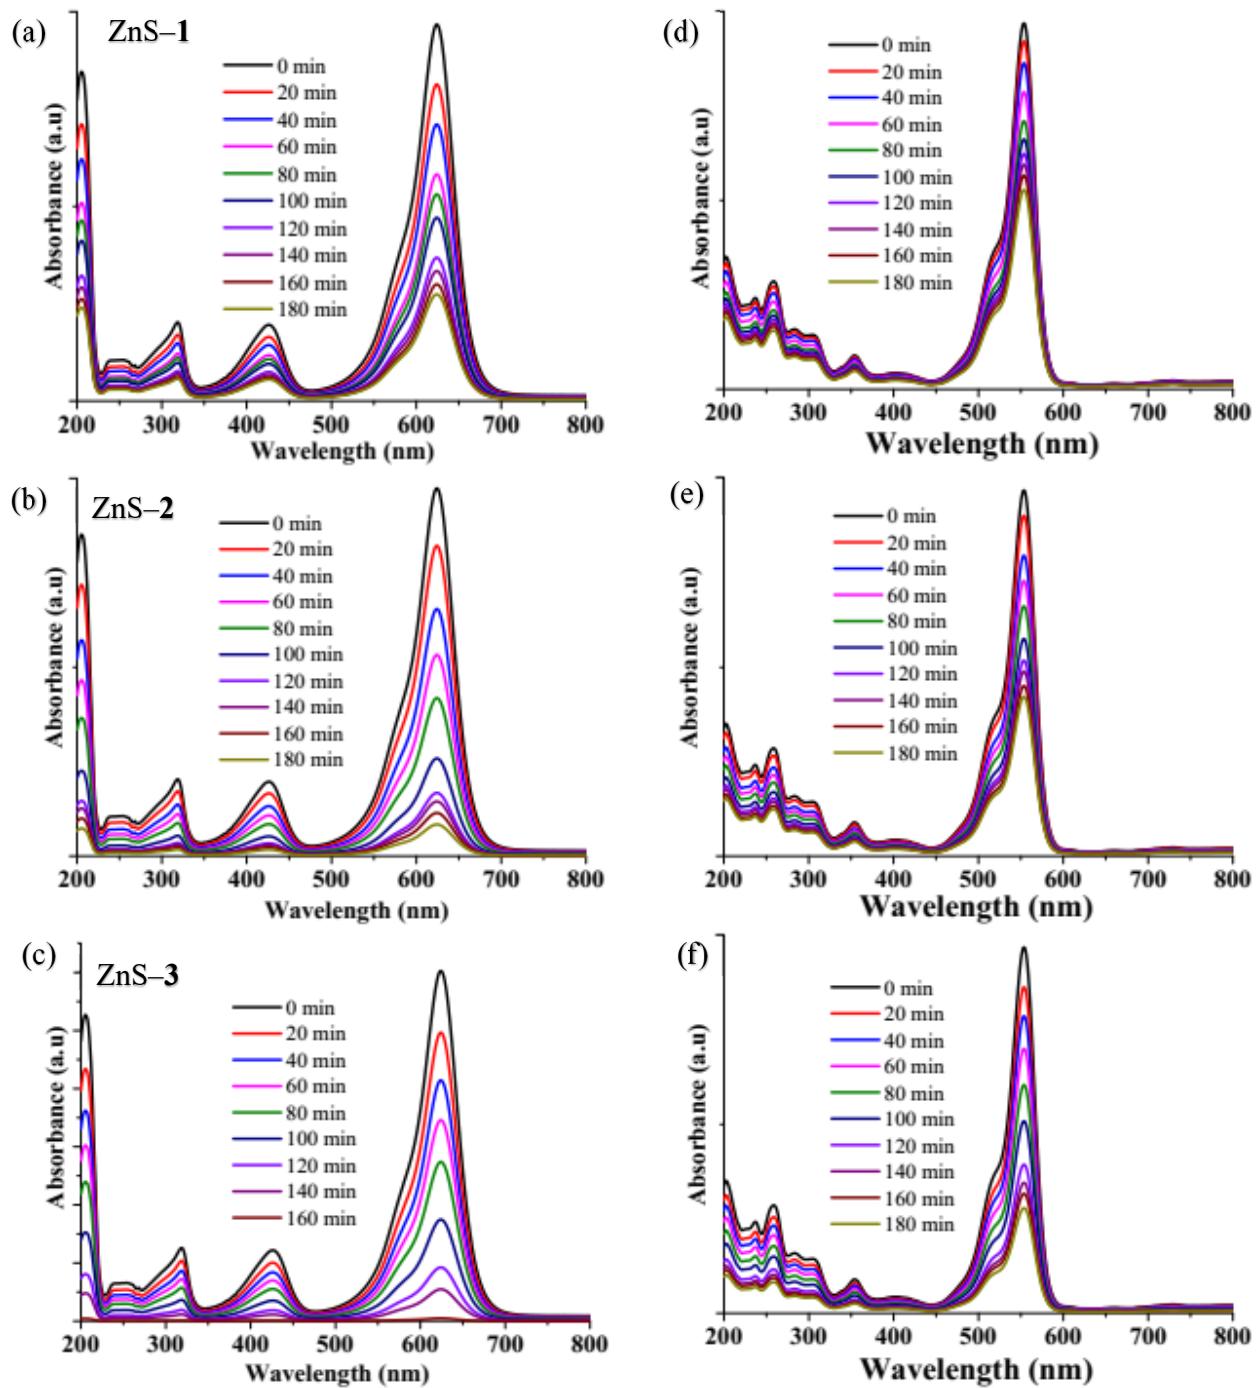

Figure S5: Absorption spectra of brilliant green (a-c) and rhodamine B (d-f) over ZnS quantum dots

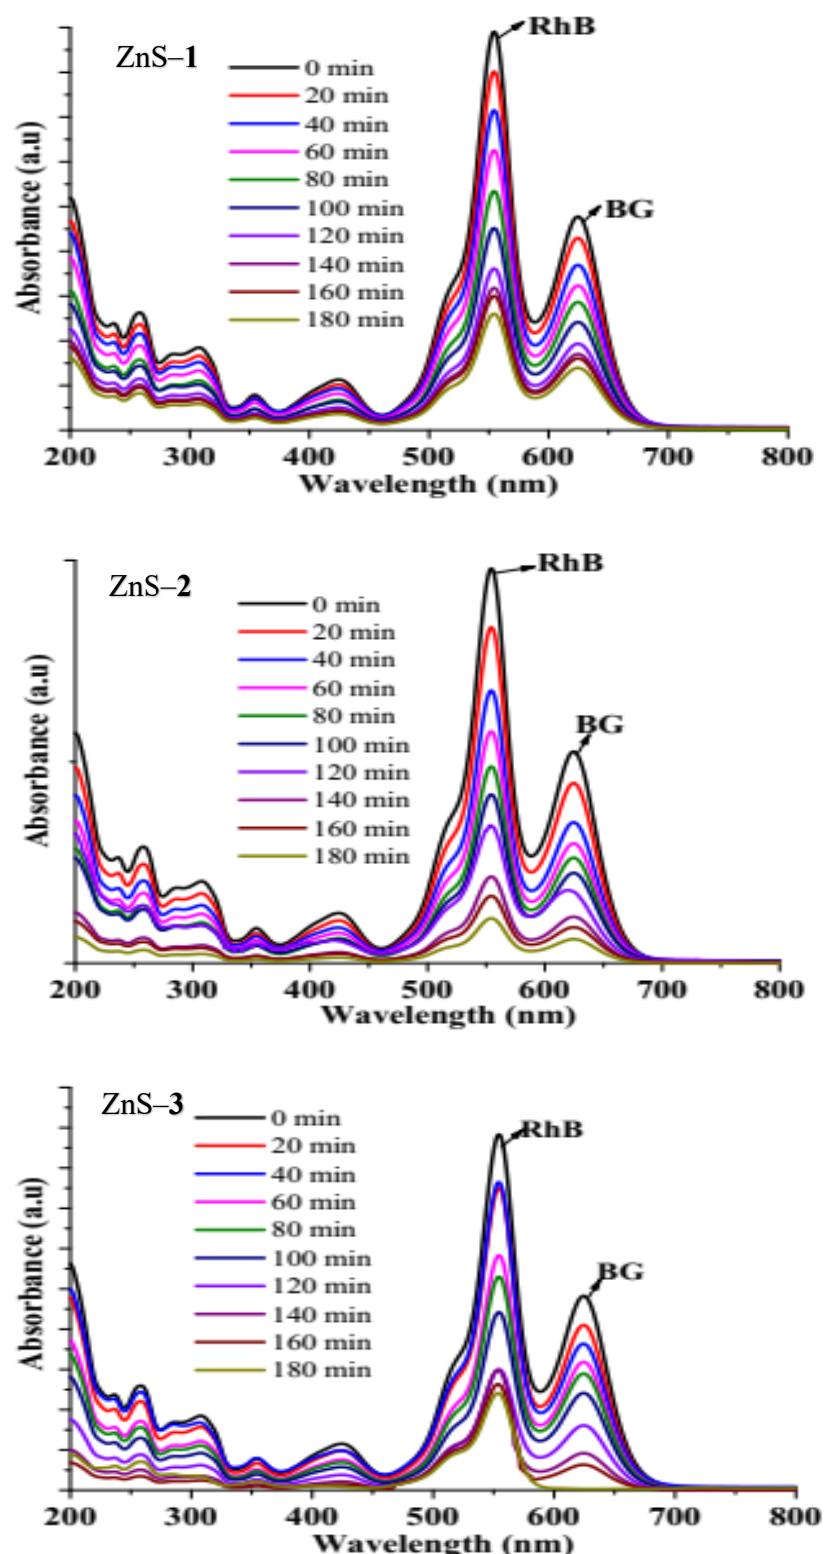

Figure S6: Absorption spectra of BG–RhB degradation over ZnS quantum dots
