

Supplementary information for

The volume-regulated anion channel LRRC8/VRAC is dispensable for cell proliferation and migration

Tianbao Liu and Tobias Stauber

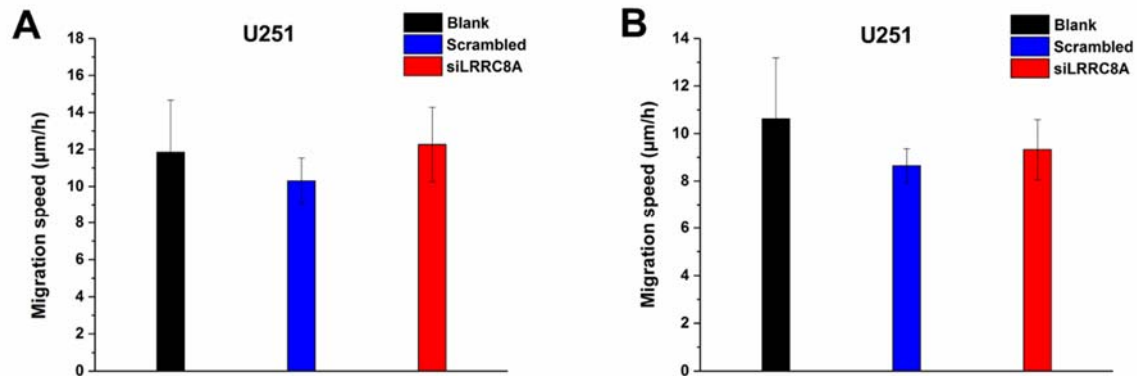

Figure S1. siRNA-mediated knockdown of LRRC8A has no significant effect on U251 cell migration, independent of the migration time. U251 cell migration started 48 h after transfection with siRNA against LRRC8A. The data were calculated after cells migrated for 36 h (A) or 48 h (B). All data represent mean \pm SD of $n = 5$ experiments.
