

Supplemental Figure 1

Supplemental Fig. 1. Comparison of relative mRNA levels of genes related to mitochondrial fatty acid oxidation in Dicer siRNA (si-Dicer) and negative control siRNA (si-NC) treated human C-MSC. The amount of mRNA was normalized using β -actin. Results are shown as mean \pm SEM (n=3), NS $p > 0.05$, * $p < 0.05$, ** $p < 0.01$, *** $p < 0.001$.
