

## Supporting Information

### Targeted Delivery of Mesenchymal Stem Cell-Derived Nanovesicles for Spinal Cord Injury Treatment

*Ju-Ro Lee, Jaewon Kyung, Hemant Kumar, Sung Pil Kwon, Seuk Young Song, In-Bo Han\* and Byung-Soo Kim\**

**Figure S1. Characterization of MΦ membrane.** Size distribution of MΦ membrane, as evaluated by nanoparticle tracking analysis.

**Figure S2. Representative images of western blots of surface markers of macrophage membrane, MSC, and MF-MSC in Figure 2B** (n = 3 per samples, 20  $\mu$ g of total proteins).

**Figure S3. Preparation of MF-NVs.** Schematic diagram of the preparation of MF-NVs.

**Figure S4. Representative images of western blots of surface marker of macrophage membrane, N-NV, and MF-NV in Figure 2F** (n = 3 per samples, 20 μg of total proteins).

**Figure S5. Cellular uptake of NVs.** Representative images showing in vitro uptake of DiI-labeled N-NVs and MF-NVs by HUVECs, PC12 cells, and RAW 264.7 cells 24 hours after the treatment. Scale bars, 50 μm.

**Figure S6. Intracellular signaling cascades of PC12 cells after treatment.** Representative images and the quantification data of western blots of PC12 cells for AKT, pAKT, and PI3K after treatment. \* $p < 0.05$  by using one-way ANOVA followed by post-hoc Bonferroni test. All data were normalized to normoxia. All values are mean  $\pm$  SD. NT indicates no treatment.

**Figure S7. Intracellular signaling cascades of HUVECs after treatment.** Representative images and the quantification data of western blots of HUVECs for PCNA, ERK 1/2, and pERK 1/2 after treatment. \* $p < 0.05$  by using one-way ANOVA followed by post-hoc Bonferroni test. All data were normalized to normoxia. All values are mean  $\pm$  SD. NT indicates no treatment.

**Figure S8. In vivo Experimental Design and timeline.**

**Figure S9. The quantification data of IHC images in Figure 7.** IHC images of (A) NF, (B) GFAP, and (C) CSPGs were quantified, as evaluated by ImageJ software ( $n = 4$  animals per group). The data of fluorescent intensity per area were normalized to normal group. \* $p < 0.05$  by using one-way ANOVA followed by post-hoc Bonferroni test. All values are mean  $\pm$  SD. NT indicates no treatment.

**Figure S10. The quantification data of IHC images in Figure 8.** IHC images of (A) TUNEL, (B) TNF $\alpha$ , and (C) vWF were quantified, as evaluated by ImageJ software ( $n = 4$  animals per group). The data of fluorescent intensity per area were normalized to normal group. \* $P < 0.05$  by using one-way ANOVA followed by post-hoc Bonferroni test. All values are mean  $\pm$  SD. NT indicates no treatment.

**Table S1. List of PCR primers of mouse-specific genes.** *Il1b*, interleukin 1 beta; *Il6* interleukin 6; *Nos2*, nitric oxide synthase 2; *Arg1*, arginase 1; *Il10*, interleukin 10; *Tnfa*, tumor necrosis factor alpha; *Vegf*, vascular endothelial growth factor.

Gene	Primers	
	Forward (5'-3')	Reverse (5'-3')
<i>Gapdh</i>	GCATCTTCTTGTGCAGTGCC	GGTAACCAGGCGTCCGATAC
<i>Il1b</i>	ATCAGGACAGCCCAGGTCAA	GCCACCTTTTGACAGTGATGAG
<i>Il6</i>	GAGGATACCACTCCCAACAGACC	AAGTGCATCATCGTTGTTTCATACA
<i>Nos2</i>	TCACCTTCGAGGGCAGCCGA	TCCGTGGCAAAGCGAGCCAG
<i>Arg1</i>	GATTATCGGAGCGCCTTTCT	CCACACTGACTCTTCCATTCTT
<i>Cd206</i>	CTGCAGATGGGTGGGTATT	GGCATTGATGCTGCTGTTATG
<i>Il10</i>	ACTGGCATGAGGATCAGCAG	CTCCTTGATTCTGGGCCAT
<i>Tnfa</i>	ACCCTCACACTCACAAACCA	GCAGCCTTGTCCTTGAAGA
<i>Vegf</i>	CAGGCTGCTCTAACGATGAA	CAGGAATCCCAGAAACAACC

**Table S2. List of PCR primers of rat-specific genes.**

Gene	Primers	
	Forward (5'-3')	Reverse (5'-3')

<i>Bcl2</i>	CTGGTGGACAACATCGCTCT	CATCCCAGCCTCCGTTATCC

**Supplementary video 1.** Representative video of animals in the no treatment group 28 days post-injury.

**Supplementary video 2.** Representative video of animals in the N-NV group 28 days post-injury.

**Supplementary video 3.** Representative video of animals in the MF-NV group 28 days post-injury.
