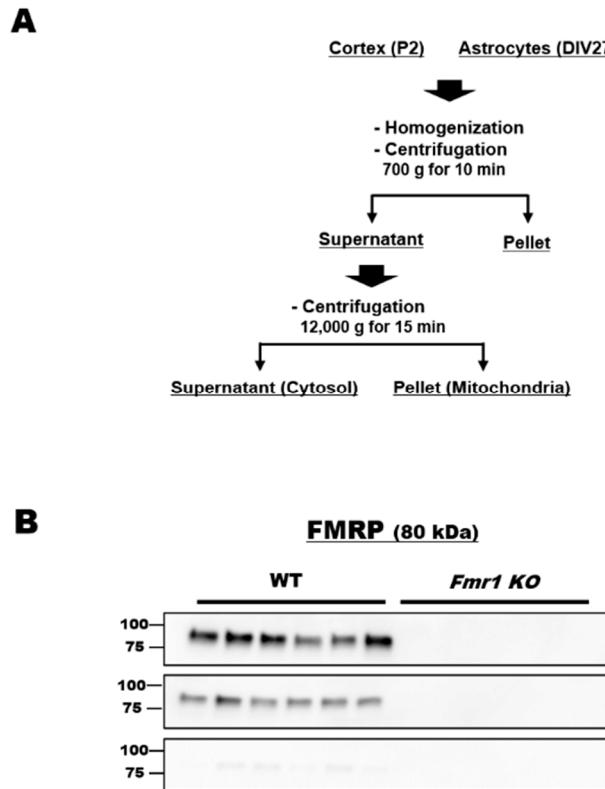

Figure S1: Mitochondrial fractionation. (A) Diagram of mitochondrial fractionation process. (B) Fragile X mental retardation protein (FMRP) is detected in the total brain lysates and mitochondrial fractions from wild-type (WT) but not Fmr1 KO mice ($n = 6$).

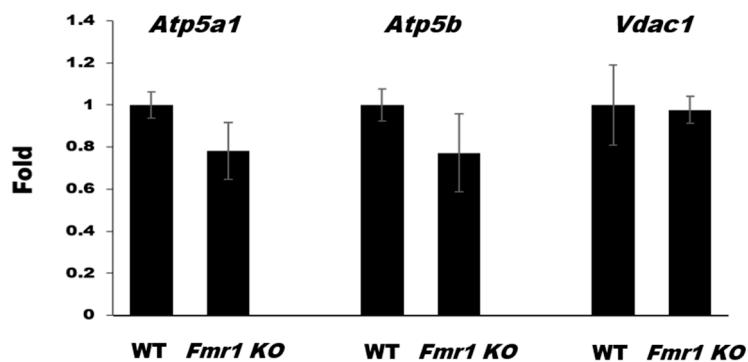

Figure S2: The relative expression levels of Atp5a1, Atp5b, and Vdac1 in the cortex of WT and Fmr1 KO mice. Each value represents the mean \pm SD ($n = 6$ per group).

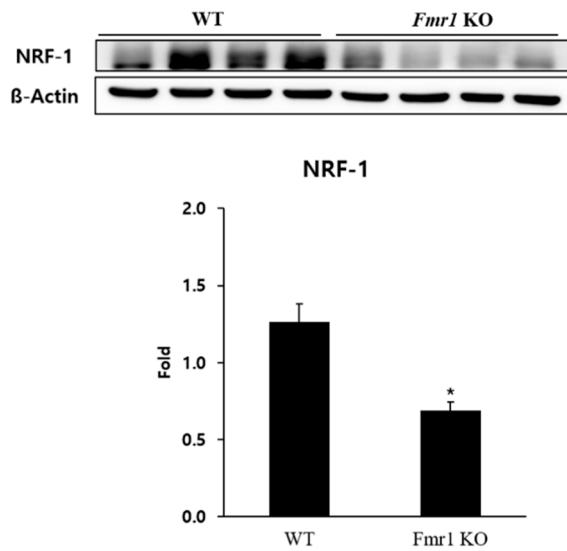

Figure S3: The relative expression levels of NRF-1 in the cortex of 10 weeks old WT and Fmr1 KO mice. Each value represents the mean \pm SD ($n = 4$ per group).). * $p < 0.05$ vs. WT mice.

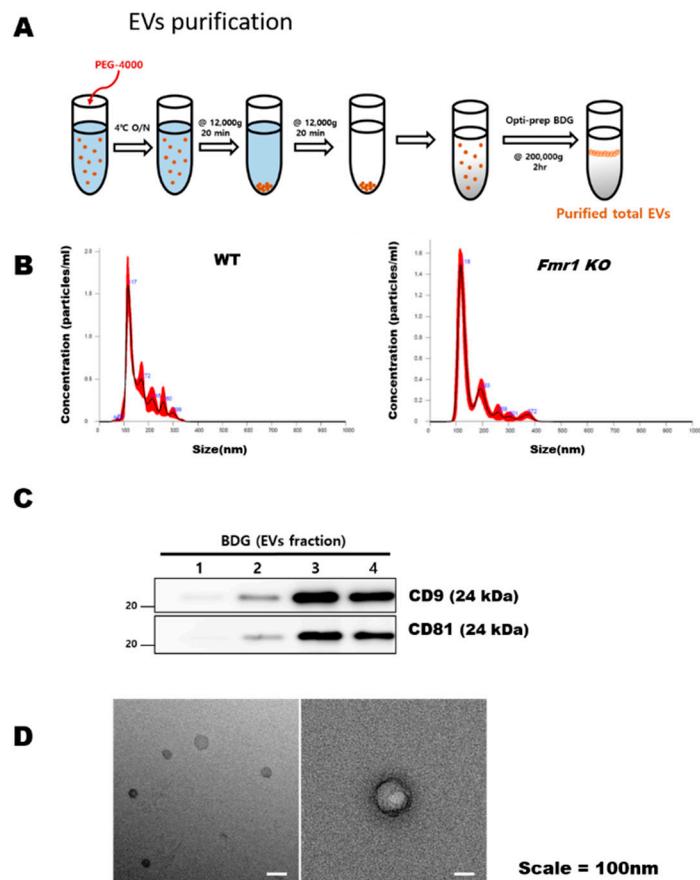

Figure S4: Isolation and purification of EVs. (A) Schematic illustration of buoyant density gradient ultracentrifugation for EVs isolation. (B) Western blot analysis of gradient fraction for the EVs markers CD81 and CD9. (C) Nanoparticle tracking analysis (NTA) of EVs fraction #3. (D) Transmission electron microscopy analysis shows the vesicles with lipid bilayer. Scale bars, 100nm.
