

Supplementary Figures

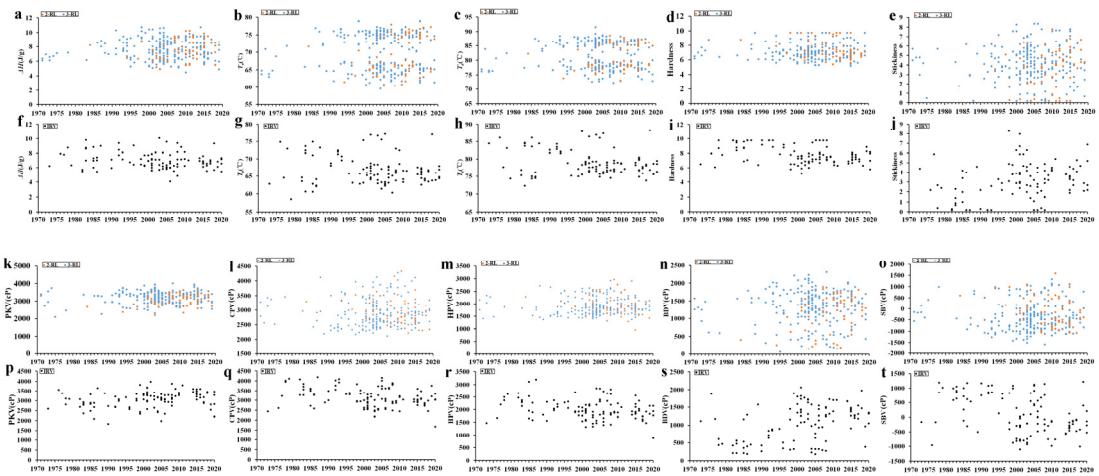

Figure S1. Phenotypic data for rice breeding distributions. (a, b, c, d, e, k, l, m, n, o) 2-RL and 3-RLs. (f, g, h, i, j, p, q, r, s, t) IRVs. (a, f) Enthalpy of gelatinisation. (b, g) Onset temperature of gelatinisation. (c, h) Terminating temperature of gelatinisation. (d, i) Hardness. (e, j) Stickiness. (k, p) Peak paste viscosity. (l, q) Cool paste viscosity. (m, r) Hot paste viscosity. (n, s) Breakdown value. (n, t) Setback value.

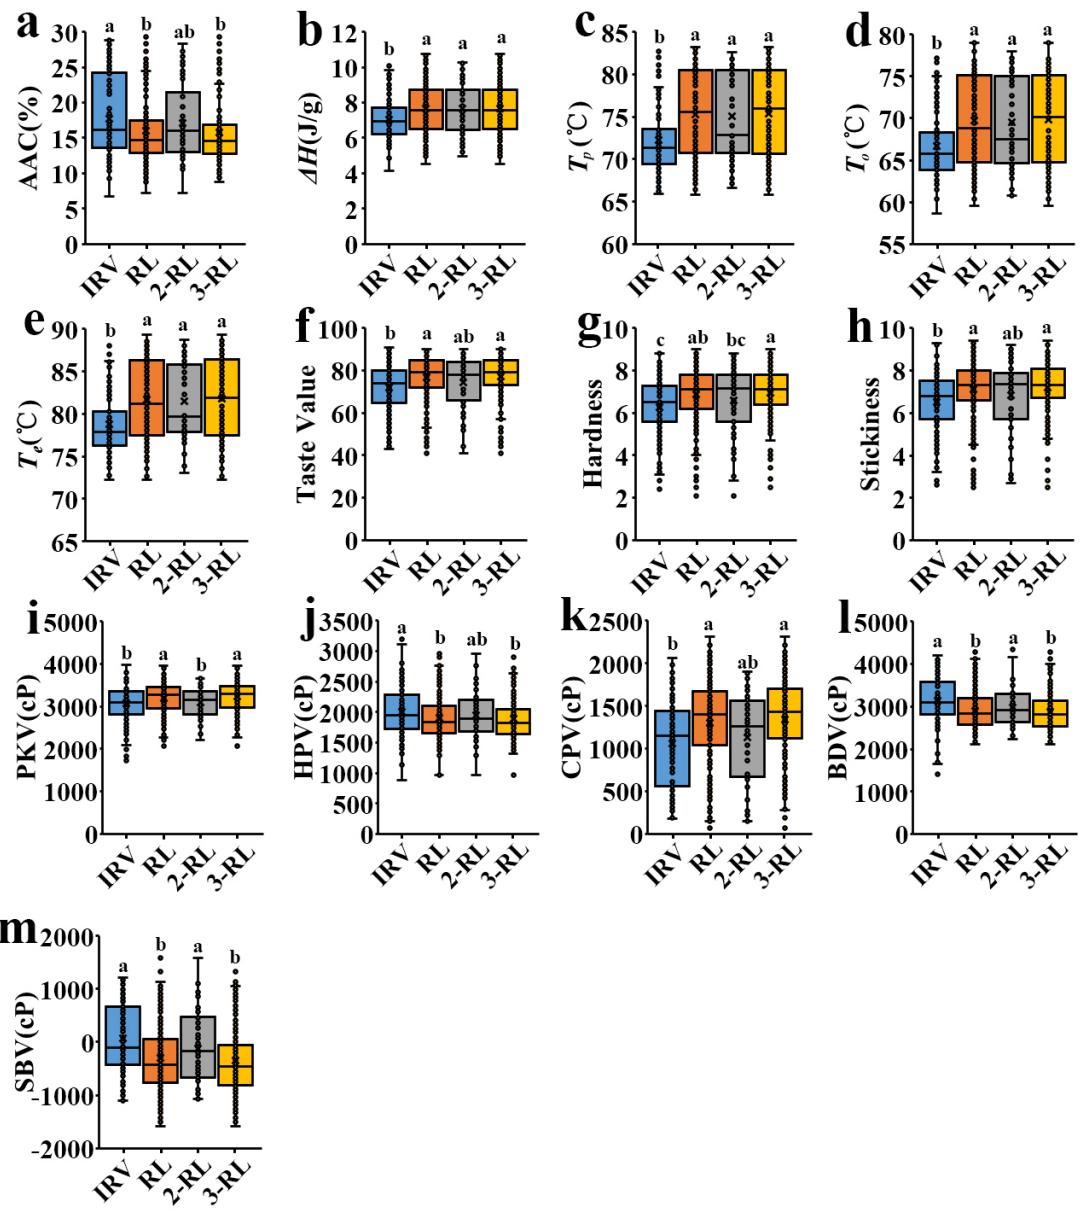

Figure S2. Phenotypic data for IRVs, 2-RLs and 3-RLs. **(a)** Apparent amylose content. **(b)** Enthalpy of gelatinisation .**(c)** Peak temperature of gelatinisation. **(d)** Onset temperature of gelatinisation. **(e)** Terminating temperature of gelatinisation. **(f)** Taste value. **(g)** Hardness. **(h)** Stickiness. **(i)** Peak paste viscosity. **(j)** Hot paste viscosity. **(k)** Cool paste viscosity. **(l)** Breakdown value. **(m)** Setback value. One-way ANOVA, different letters represent significant differences ($p < 0.05$).

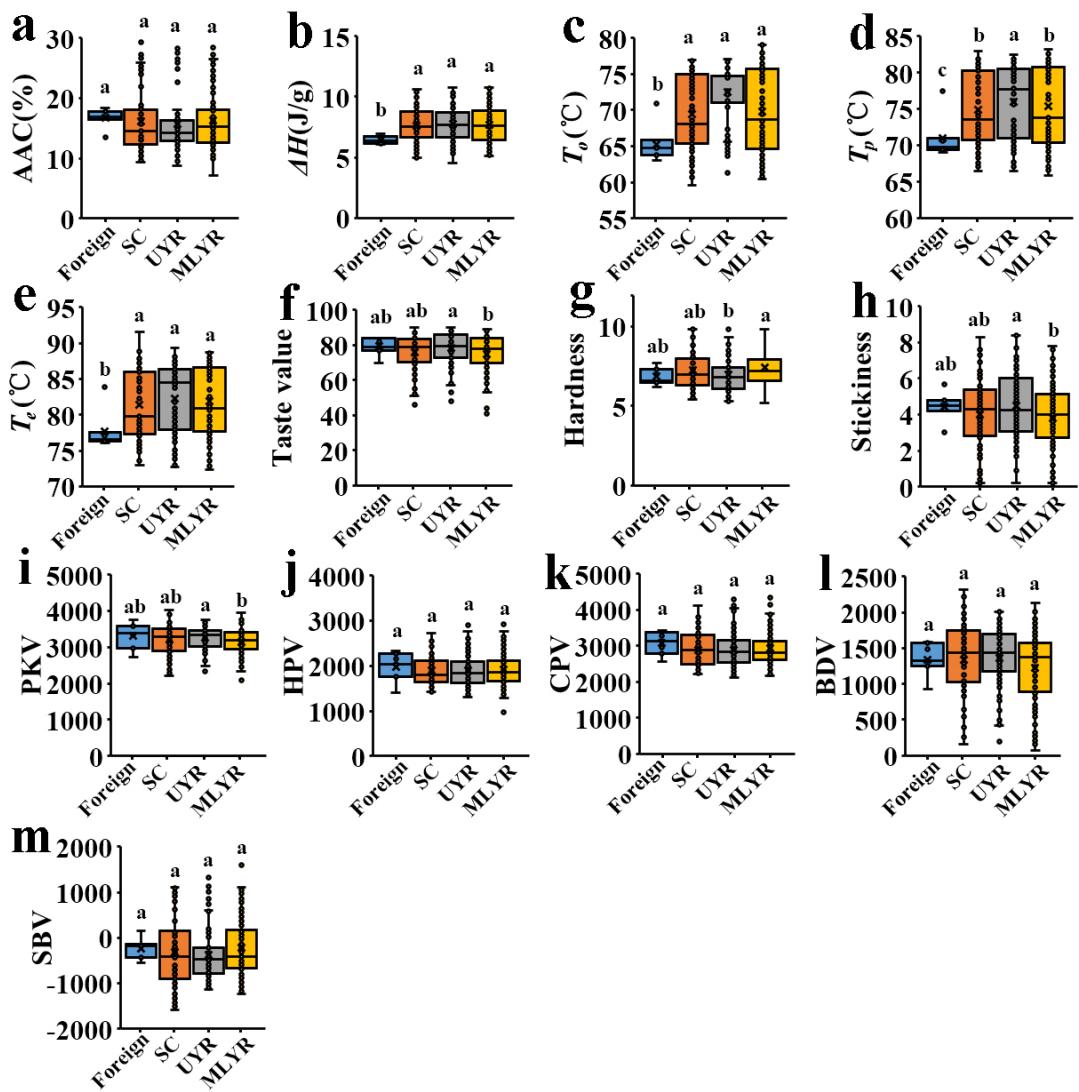

Figure S3. Phenotypic data for different areas. **(a)** Apparent amylose content. **(b)** Enthalpy of gelatinisation **(c)** Peak temperature of gelatinisation. **(d)** Onset temperature of gelatinisation. **(e)** Terminating temperature of gelatinisation. **(f)** Taste value. **(g)** Hardness. **(h)** Stickiness. **(i)** Peak paste viscosity. **(j)** Hot paste viscosity. **(k)** Cool paste viscosity. **(l)** Breakdown value. **(m)** Setback value. One-way ANOVA, different letters represent significant differences ($p < 0.05$).

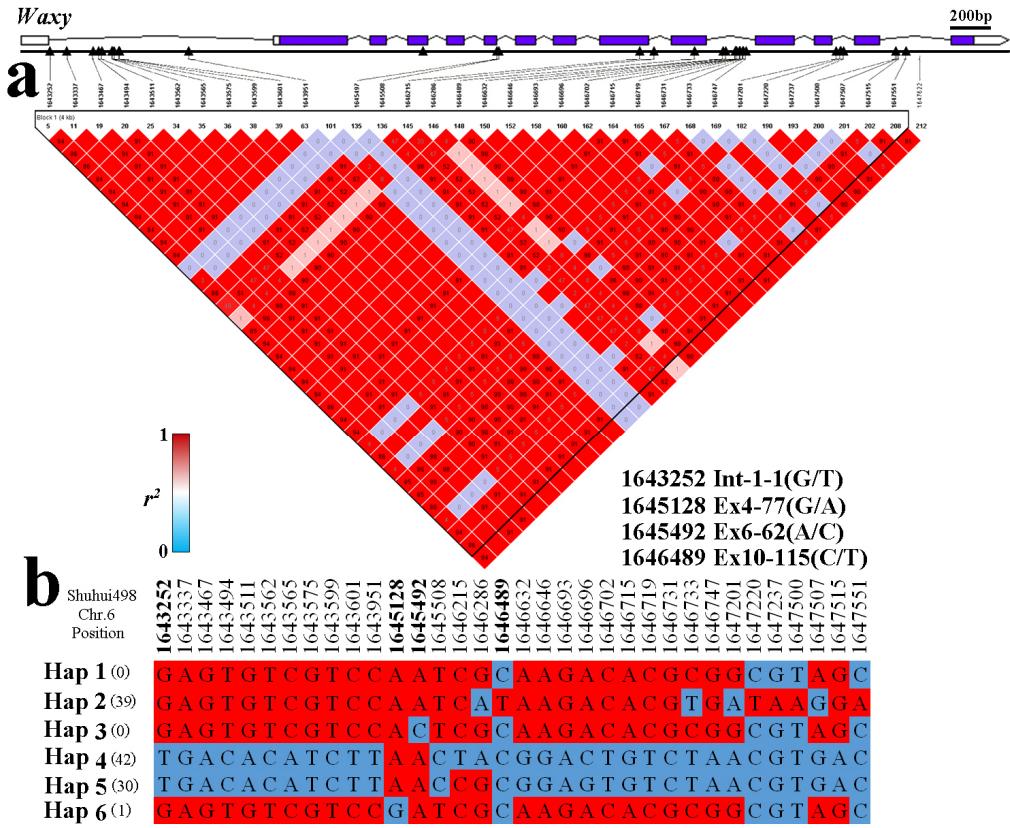

Figure S4. Analysis of haplotypes of *Waxy* in IRVs. **(a)** Linkage disequilibrium (LD) analysis. The r^2 value is shown on the matrix diagram. **(b)** Haplotype analysis.

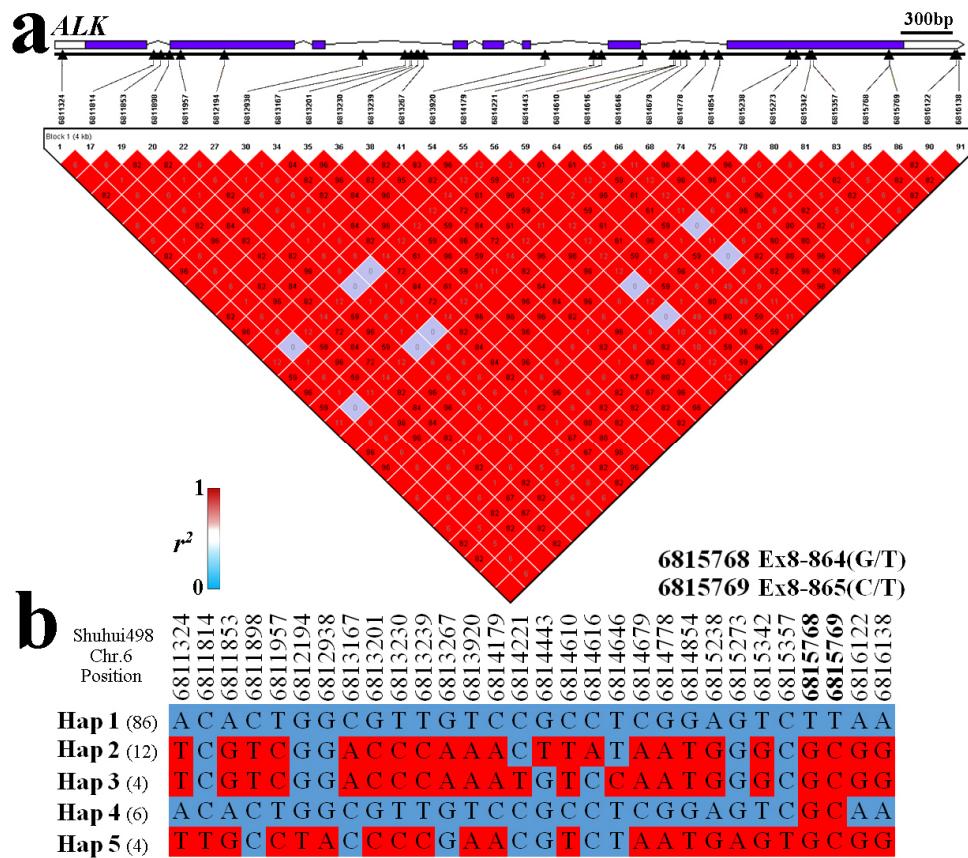

Figure S5. Analysis of haplotypes of *ALK* in IRVs. **(a)** Linkage disequilibrium (LD) analysis. The r^2 value is shown on the matrix diagram. **(b)** Haplotype analysis.

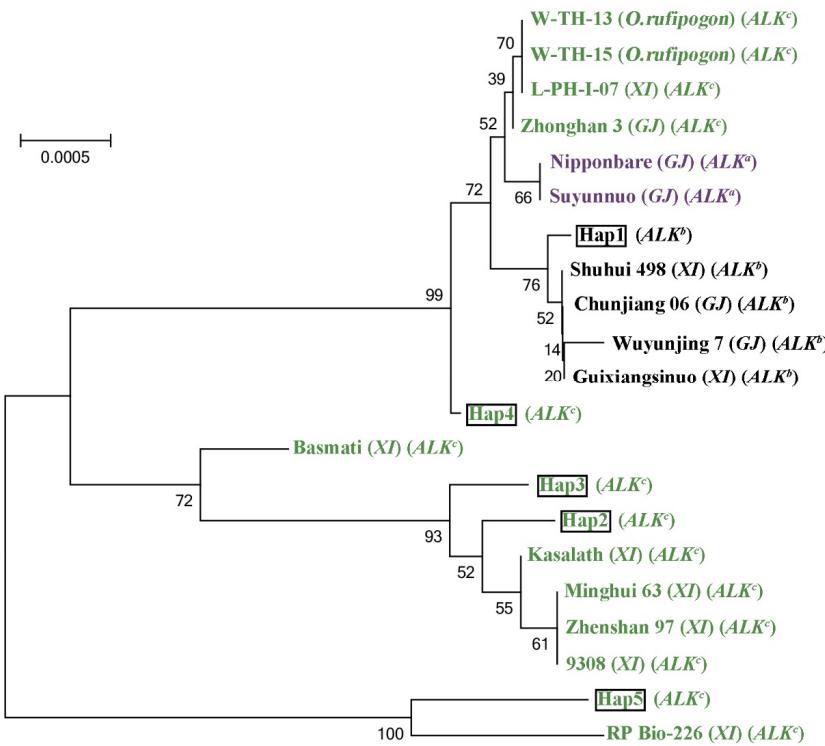

Figure S6. Clustering analysis of different rice varieties *ALK*.

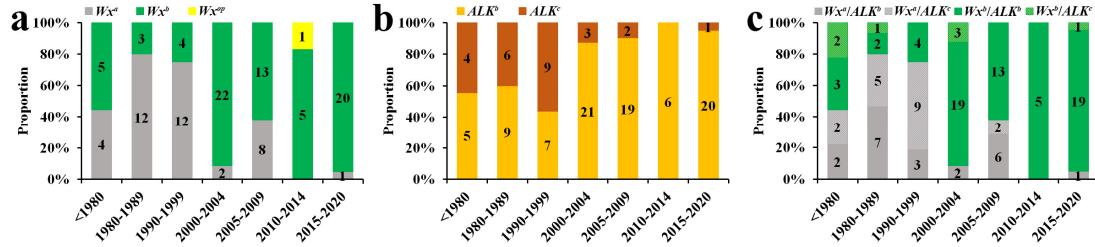

Figure S7. Frequency distribution of different rice materials based on different alleles. **(a)** *Waxy*. **(b)** *ALK*. **(c)** Combination of *Wx* and *ALK*.

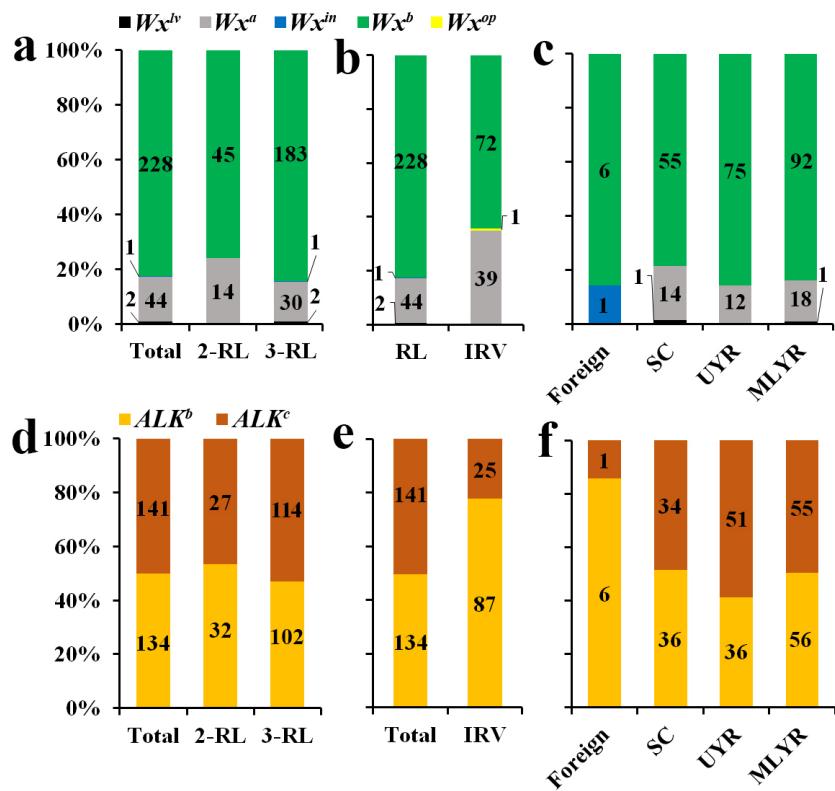

Figure S8. Frequency distribution of different rice materials based on different alleles of different types and areas. **(a, b, c)** *Waxy*. **(d, e, f)** *ALK*.

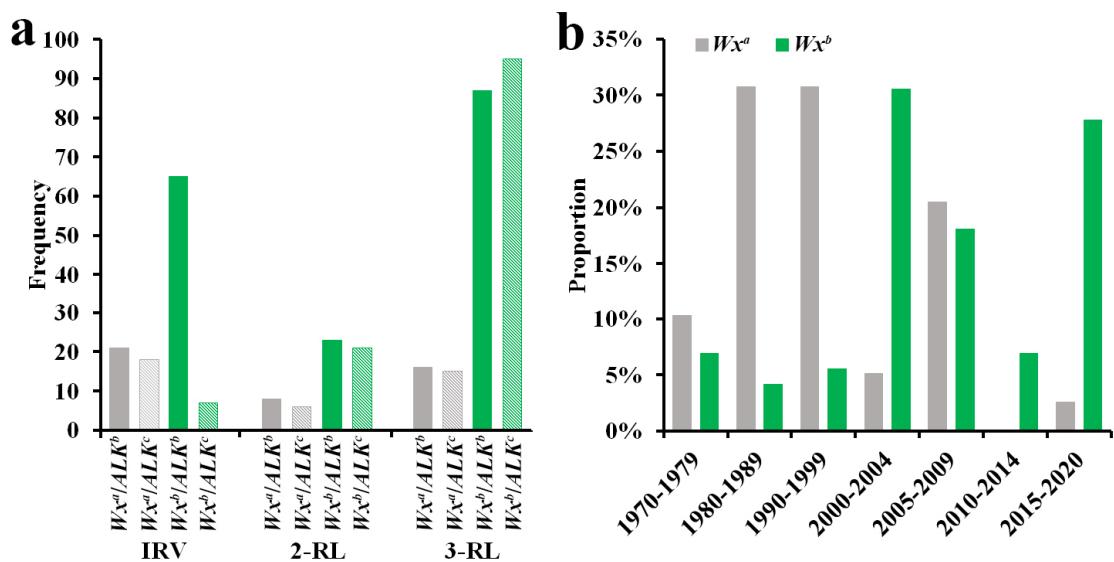

Figure S9. Combined analysis of *Waxy* and *ALK*. **(a)** Frequency distribution of different combinations. **(b)** Distribution of Wx^a and Wx^b at different breeding times.

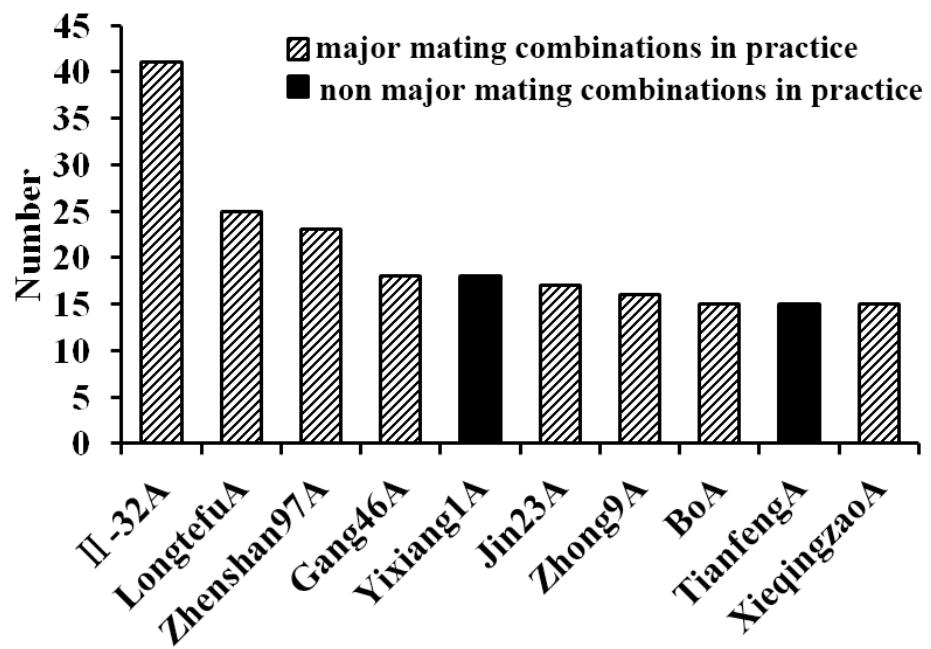

Figure S10. Female plants matching RLs in this experiment based on statistics or sterile lines.
