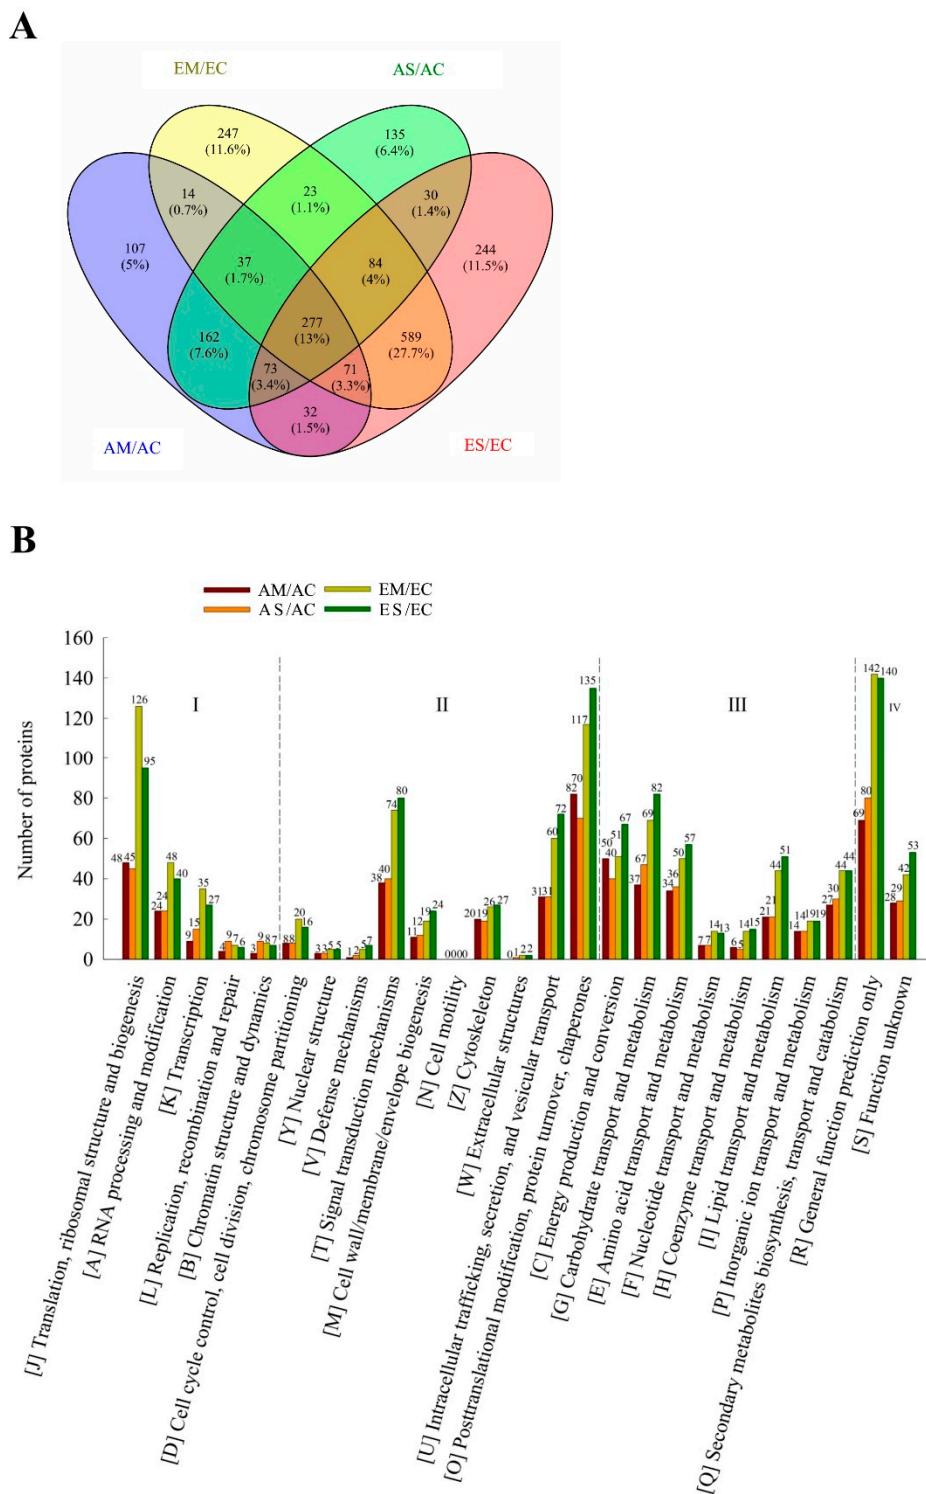

Figure S1. The differential proteins under moderate and severe drought stress. (A) Venn diagram analysis, (B) KOG functional classification chart ((I) Information storage and processing, (II) Cellular processes and signals, (III) Metabolism, (IV) other unknown functions). AC, atmospheric $[CO_2]$ + control condition; EC, $[CO_2]$ enrichment + control condition; AM, atmospheric $[CO_2]$ + moderate drought stress; EM, $[CO_2]$ enrichment + moderate drought stress; AS, atmospheric $[CO_2]$ + severe drought stress; ES, $[CO_2]$ enrichment + severe drought stress. The same below.

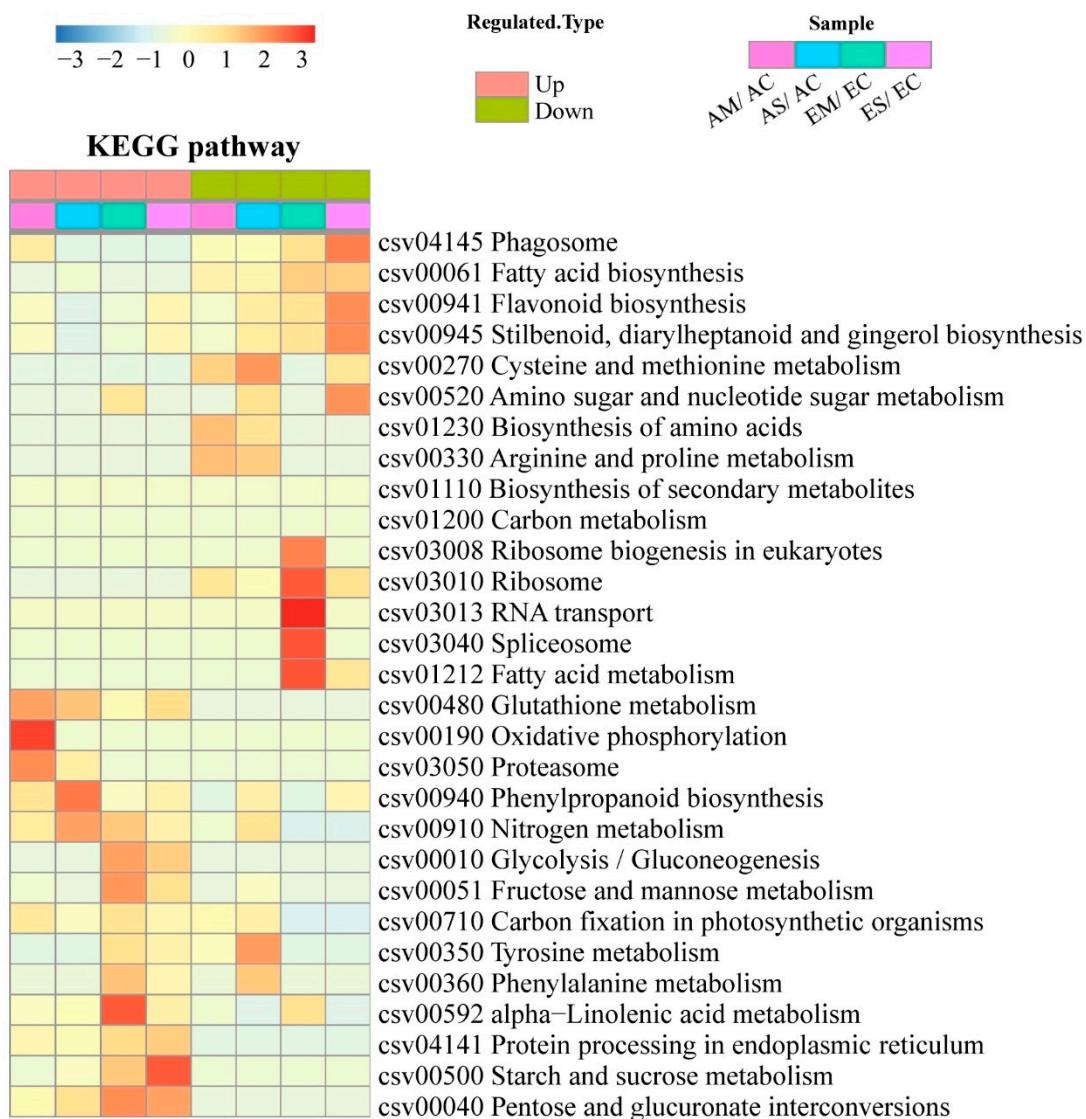

Figure S2. A comprehensive heatmap for cluster analysis of the enrichment patterns of KEGG pathways of differential proteins under moderate and severe drought stress. The color blocks corresponding to the functional description of the differentially expressed proteins in different groups indicate the degree of enrichment, red represents strong enrichment, and blue represents weak enrichment

Table S8. Effects of [CO₂] enrichment on the activities of related enzymes in roots of cucumber seedlings under drought stress.

Treatments	Hexokinase /nmol·min ⁻¹ ·g ⁻¹ FW	Alcohol dehydrogenase /μmol·min ⁻¹ ·g ⁻¹ FW	Malate dehydrogenase /mmol·min ⁻¹ ·g ⁻¹ FW	Nitrate reductase /ugNO ₂ ·g ⁻¹ ·h ⁻¹ FW	Glutamate synthase /U·g ⁻¹ FW	Glutamate dehydrogenase /U·g ⁻¹ FW

Note: Different letters within a column indicate a significant difference ($p < 0.05$). AC, atmospheric [CO₂] + control condition; EC, [CO₂] enrichment + control condition; AM, atmospheric [CO₂] + moderate drought stress; EM, [CO₂] enrichment + moderate drought stress; AS, atmospheric [CO₂] + severe drought stress; ES, [CO₂] enrichment + severe drought stress. All results were expressed as the mean ± standard deviation (SD) of three repeated values, *, difference is significant at the 0.05 level; **, difference is significant at the 0.01 level; ***, difference is significant at the 0.001 level. The same as below.
