

Supplemental Data

Supplemental figure S1. Process of image handling for microscopic fluorescence quantification. Upper row: NpB sample. Left: auto-threshold Li mode, middle: auto-selection of ROI from threshold and random selection of background, right: intensity measurement on raw monogram FLUO channel. Lower row: NpBE1 sample. Left: auto-threshold Max Entropy mode, middle: auto-selection of ROI from threshold and random selection of background, right: intensity statistics measurement on raw monogram FLUO channel

Supplemental figure S2. Visually observed effects in *L. lactis* NpB at 3-hour, 9-hour and 24-hour post induction with or without pre-treatment with Ellman's reagent (4 mM)

Supplemental figure S3. Supplemental data for Ellman's assay for sulfhydryl group quantification in bio-organism samples. **(a)** Standard curve of serial acetyl cysteine concentrations; **(b)** Protein concentration after IMAC purification; **(c)** Stain-free polyacrylamide gel after IMAC purification of BmpA from lysed NpB cells at 3-hour post induction, lane 2: positive control, lane 3 – 4: pellet – lysate, lane 5: flow through, lane 6 – 10: collected fractions, lane 11: buffer-exchanged concentrated pooled fraction.

Supplemental figure S4. Graph of BmpA purification using Äkta Go and Unicorn software. A peak of protein was detected from fraction 4 and collected until fraction 8.

Supplemental figure S5. AlphaFold predicted protein structure of BmpA (available online at <https://alphafold.ebi.ac.uk/entry/A2RK47> and Uniprot, reference number: A2RK47 - BmpA_LACLM). For predicted native localization of BmpA on *L. lactis*, refer to Berlec et. al. 2011
