

Supplemental Figure S1. Flow cytometric analysis for immune cell subset identification in BALF. Representative dot plots from a LPS-tread mouse are shown for gating for (A) lymphocytes (Lym; $CD3^+$ or $B220^+$ cells) among viable cells. (B) Granulocytes ($CD11c^-CD11b^+$) are gated from non-lymphocytes. (C) Macrophages (MΦ; $Ly6G^+Siglec-F^+$) or dendritic cells (DC; $Ly6G^-Siglec-F^-$) are gated from $CD11c^+CD11b^-$ cells.
