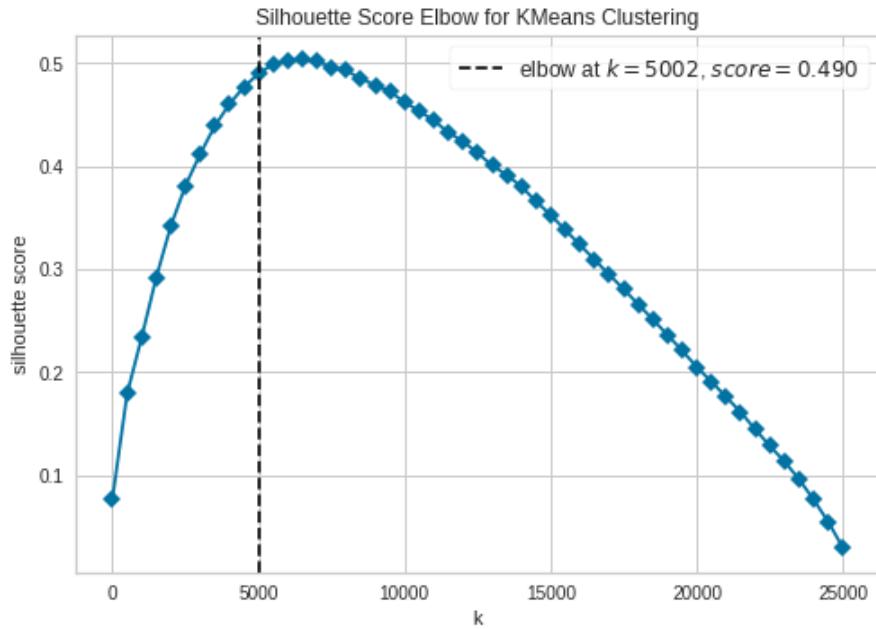

**Figure S1.** Description of the Binning and OV Binning partitioning methods implemented in this study. Fisher's Iris dataset (Fisher, R. A. Ann. Eugen. 1936, 7 (2), 179–188) is used in the example to show how (a) binning partitioned the space in the two firsts PCs while (b) OV Binning divided twice the first PCA due to the great variance present in it. **Simple Binning** algorithm approach sorts the Principal Components axes (PCAs) by descending order of its explained variance. When a certain number of bins is requested ( $k$ ), the algorithm will divide each axis subsequently until the number of occupied bins are equal or less than  $k$ . Hence, each partition results in the formation of  $2^n$  bins, being  $n$  the number of divided PCs. **Optimum Variance Binning** (OV Binning) algorithm is a modification of the Optimum Binning algorithm described by Pascual *et.al.* (Mol. Divers. 2003, 6 (2), 121–133). It also sorts the PCAs by descending order of its explained variance but, assuming that the division of an axis divides its variance in two subaxes, the following partition is reimplemented in the same PCA only if its variance is greater than the explained variance of the following axis. With this procedure, multiple partitions can be observed in the first PCAs as they contain higher explained variance values proceeding from the Principal Component Analysis. Hence, molecules are binned with a bias toward the PCs that exhibit the largest variation (see Figures S2 and S3).

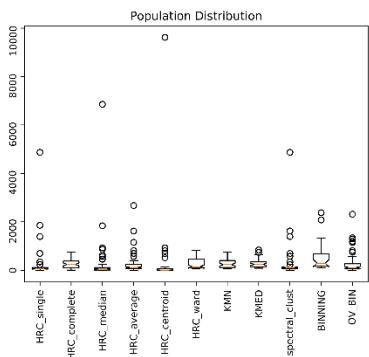

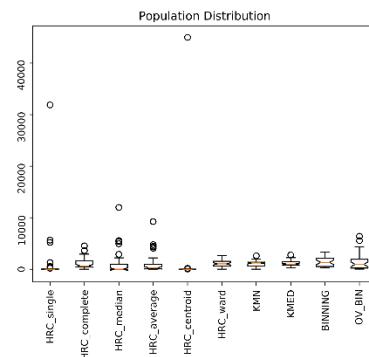

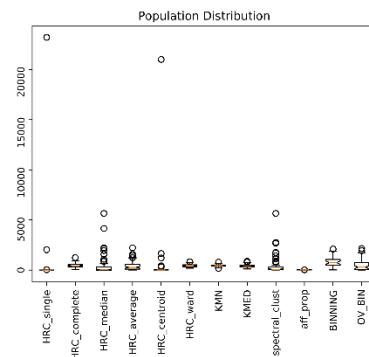

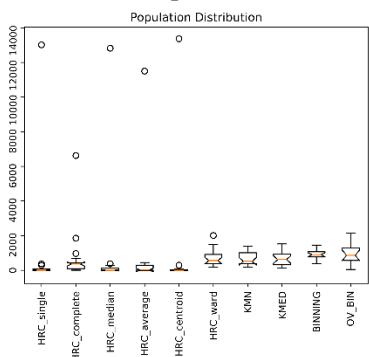

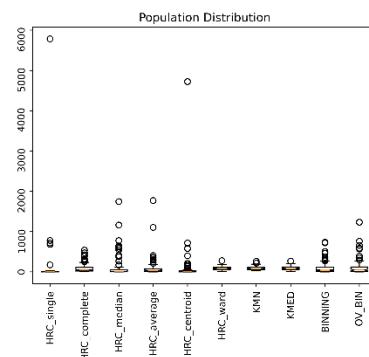

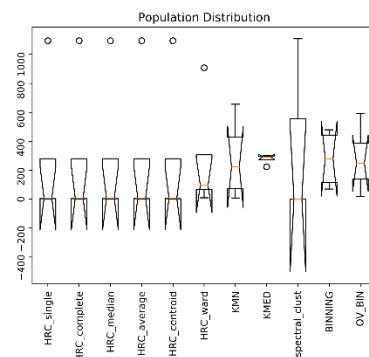

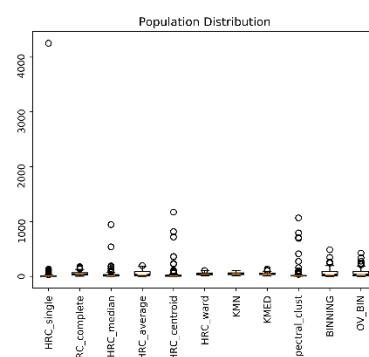

**Figure S2.** Application of binning and OV binning on Tafenoquine's dataset to divide the chemical space into 8 bins. The figure shows the representation of the 8 bins in 3D (A, B) and 2D (C, D). For 2D examples, partition subaxes are represented when the showed axes are divided: once for PCA1, PCA2 and the non-represented PCA3 in binning (C) and three times for PCA1 in OV binning (D).

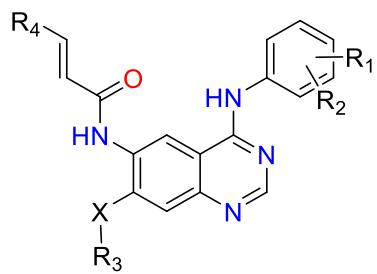

**Figure S3.** OV Binning partitioning representation of Tafenoquine's case study dataset for 2, 4, 8, 16, 32 and 64 bins.

**Figure S4.** Silhouette Score Elbow plot for KMN clustering of Tafenoquine database.
