**Abstract:** Brown seaweeds are rich in phenolic compounds and have high health benefits. However, the phenolics present in Australian beach-cast seaweed are still unclear. This study investigated the effect of ultrasonication and conventional methodologies by four different solvents on free and bound phenolics of freeze-dried brown seaweed species obtained from the southeast Australian shoreline. The phenolic content and their antioxidant potential were determined by *in vitro* assays followed by identification and characterization by LC-ESI-QTOF-MS/MS and quantified by HPLC-PDA. The *Cystophora* sp., displayed high total phenolic content (TPC) and phlorotannin content (FDA) when extracted using 70% ethanol (ultrasonication method). *Cystophora* sp., also exhibited strong antioxidant potential in various assays, such as DPPH, ABTS, and FRAP in 70% acetone through ultrasonication. TAC is highly correlated to FRAP, ABTS, and RPA ( $p < 0.05$ ) in both extraction methodologies. LC-ESI-QTOF-MS/MS analysis identified 94 and 104 compounds in ultrasound and conventional methodologies, respectively. The HPLC-PDA quantification observed phenolic acids to be higher in ultrasonication methodology. Our findings would facilitate the development of nutraceuticals, pharmaceuticals, and functional foods.

**Keywords:** seaweeds; freeze-drying; conventional extraction; ultrasonication; phenolic compounds; antioxidant activity; LC-ESI-QTOF-MS/MS, HPLC-PDA

All values are expressed as the mean  $\pm$  SD and performed in triplicates. Different letters (a, b, c, d, e) within the same column are significantly different ( $p < 0.05$ ) samples within the solvent whereas letters (A, B, C, D, E) within the same column are significantly different ( $p < 0.05$ ) samples within the species. Six species of seaweed are reported based on dry weight. CE (catechin equivalents), QE (quercetin equivalents), GAE (gallic acid equivalents), PGE (phloroglucinol equivalents). TFC (total flavonoids content), TPC (total phenolic content), TCT (total tannins content), DMBA (2,4-dimethoxybenzaldehyde assay), PBA (Prussian blue assay), FDA (Folin-Denis Assay). The abbreviation of solvents expressed are ACE (Acetone), MeOH (Methanol), EtOH (Ethanol), EA (Ethyl Acetate).

**Table S2:** Estimation of freeze-dried bound phenolics of seaweed species extracted by the conventional and non-conventional method.

All values are expressed as the mean  $\pm$  SD and performed in triplicates. Different letters (a, b, c, d, e) within the same column are significantly different ( $p < 0.05$ ) samples within the solvent whereas letters (A, B, C, D, E) within the same column are significantly different ( $p < 0.05$ ) samples within the species. Six species of seaweed are reported based on dry weight. CE (catechin equivalents), QE (quercetin equivalents), GAE (gallic acid equivalents), PGE (phloroglucinol equivalents). TFC (total flavonoids content), TPC (total phenolic content), TCT (total tannins content), DMBA (2,4-dimethoxybenzaldehyde assay), PBA (Prussian blue assay), FDA (Folin-Denis Assay). The abbreviation of solvents expressed are ACE (Acetone), MeOH (Methanol), EtOH (Ethanol), EA (Ethyl Acetate).

**Table S3:** Estimation of freeze-dried free phenolic's antioxidant potential of seaweed species extracted by the conventional and non-conventional method.

Samples	Solvents	DPPH (mg TE/g)	FRAP (mg TE/g)	ABTS (mg TE/g)	FICA (mg EDTA/g)	·OH-RSA (mg TE/g)	TAC (mg TE/g)	RPA (mg TE/g)

All values are expressed as the mean  $\pm$  SD and performed in triplicates. Different letters (<sup>a, b, c, d, e</sup>) within the same column are significantly different ( $p < 0.05$ ) samples within the solvent whereas letters (<sup>A, B, C, D, E</sup>) within the same column are significantly different ( $p < 0.05$ ) samples within the species. Six species of seaweed are reported based on dry weight. TE (Trolox equivalents), EDTA (ethylenediaminetetraacetic acid), FRAP (ferric reducing antioxidant power), DPPH (2,2'-diphenyl-1-picrylhydrazyl), TAC (total antioxidant capacity), ABTS (2,2'-azino-bis-3-ethylbenzothiazoline-6-sulfonic acid), RPA: reducing power assay; ·OH-RSA: hydroxyl radical scavenging activity; FICA: ferrous ion chelating activity. The abbreviation of solvents expressed are ACE (Acetone), MeOH (Methanol), EtOH (Ethanol), EA (Ethyl Acetate).

**Table S5.** Characterization of free phenolic compounds in different seaweed samples with different extraction methods by LC-ESI-QTOF-MS/MS

No.	Proposed compounds	Molecular Formula	RT (min)	Ionization (ESI <sup>+</sup> /ESI <sup>-</sup> )	Molecular Weight	Theoretic al ( <i>m/z</i> )	Observed ( <i>m/z</i> )	Error (ppm)	MS <sup>2</sup> Product ions	Seaweed
