

Table S1. Crude and adjusted associations between the neighbourhood walkability index and the proportion of residents walking from/to work/school (threshold distance equal to 400 m).

	Walking from/to Work/School OR and 95% CI ¹	Walking from/to Work/School AOR and 95% CI ²
Neighbourhood walkability index		
Q1—least walkable	1.00	1.00
Q2	1.13 (1.09–1.16)	1.14 (1.11–1.18)
Q3	1.26 (1.23–1.30)	1.30 (1.26–1.34)
Q4	1.40 (1.37–1.44)	1.47 (1.43–1.52)
Q5—most walkable	1.59 (1.55–1.64)	1.72 (1.67–1.77)

¹ Odds ratio (OR) and 95% Confidence Intervals. ² Adjusted Odds ratio (AOR) and 95% Confidence Intervals. Adjusted for the proportion of active-age population, 15–64 years, proportion of men, proportion of employed people, the proportion of people working in other municipalities and the neighbourhood socioeconomic deprivation score.
