Supplementary Material

Sequence index plots are shown below for each of the polysubstance use sequence classes identified in a sample of Assiniboine and Sioux people who use injection drugs (n=40). Polysubstance use combinations are shown relative to the 20 years of life preceding the interview. Age at time of polysubstance use combination is plotted on the X-axis. The number of individuals in the cluster is shown on the Y-axis, with individual bars (polysubstance use sequences) shown for each individual.

Cluster 1. (n=10)
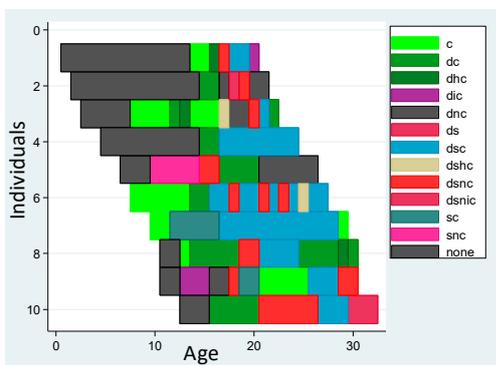

Cluster 2. (n=16)

Cluster 3. (n=14)
