Table 1. Top export commodities from Vietnam and share of trading partners.

We provide the share of top ten trade partners of selected key Vietnamese export commodities defined in accordance to SITC Rev.2.

Apparel and clothing accessories		Footwear		Fish, crustacean and Mollusca, and preparations		Coal, coke and briquettes		Office machines and automatic data processing equipment		Electric machinery, apparatus and appliances, and parts

Table 2. Common statistics on exports from Vietnam by trading partner.

This table presents the common statistics on the dependent variable, export value denoted as $\ln X_{ijt}$. These are presented for the full sample and regional panels from a sample of 54 key trading partners of Vietnam. The six regional panels are: SMAFRICA (Africa); SMAMERICA (the Americas and Asia Pacific); SMEUROPE (Europe); SMASIAH; SMASIAM; and SMASIAL (Asian trading partners grouped by high-, middle- and low-income economies).

Table 3. Common statistics on the determinants of Vietnam's exports.

This table displays common statistics on the independent variables for the total sample and regional panels: Africa (SMAFRICA); America (SMAMERICA); and Europe (SMEUROPE). These include: (i) the size of economy, measured as the product of Vietnamese GDP (country *i*) and a trading partner's GDP (country *j*) - *Y*; (ii) the standard of living - *PY*, constructed as the product of Vietnamese per capita GDP and a trading partner's per capita GDP, measuring the level of economic development; (iii) the difference of endowment between Vietnam, *i*, and a trading partner *j*, that is measured as the absolute value of the difference between Vietnamese per capita GDP and a trading partner's per capita GDP - *DPY*; (iv) exchange rate of Vietnam currency against its trading partner captures the impact of depreciation of Vietnam currency on the value of exports, measured by the nominally official exchange rates (*ERN*); (v) *VNTRADE* and *PTRADE* measure the degree of openness for Vietnam and trading partners, designed by the ratio of total trade value and GDP; (vi) trade is impeded by the transit costs that are proxied by the distance between Vietnam and its trading partners (*DIST*).

Table 3. continued. Common statistic on the determinants of exports.

The common statistics on the independent variables presented here belong to the Asian sub-groups: high-income Asian group (SMASIAH); middle-income Asian group (SMASIAM), and low-income Asian group (SMASIAL). These include: (i) the size of economy, measured as the product of Vietnamese GDP (country *i*) and a trading partner's GDP (country *j*) (*Y*); (ii) the standard of living (*PY*), constructed as the product of Vietnamese per capita GDP and a trading partner's per capita GDP, measuring the level of economic development; (iii) the difference of endowment between Vietnam, *i*, and a trading partner *j*, that is measured as the absolute value of the difference between Vietnamese per capita GDP and a trading partner's per capita GDP (*DPY*); (iv) exchange rate of Vietnam's Dong against its trading partner captures the impact of depreciation of Vietnam currency on the value of exports, measured by the nominally official exchange rates (*ERN*); (v) *VNTRADE* and *PTRADE* measure the degree of openness for Vietnam and trading partners, designed by the ratio of total trade value and GDP; (vi) trade is impeded by the transit costs that are proxied by the distance between Vietnam and its trading partners (*DIST*).

Table 4. Correlation between income-source variables by regional country groups.

The table presents the unconditional correlations between income-sourced variables. See Table 1 for the construction of the variables. This table is aimed at showing that there are significant multi-correlation amongst three variables above, therefore there is a need to separate them in estimation process.
