## Supplementary Materials

### 2.1. Preparation of Photocatalysts

VUKOPOR is the Al<sub>2</sub>O<sub>3</sub> foam (Figure S1) with following parameters: specific surface area 0.6 cm<sup>2</sup>/g, apparent density of ceramic body 2.35 g/cm<sup>3</sup>, and porosity of ceramic body 33%. The utilized foam had a height of 1 cm and a diameter of 7 cm.

**Figure S1.** Photo of the Vukopor® A.

### 2.2 Photocatalytic Tests

**Figure S2.** Picture of the reactor for photocatalytic study on the decomposition of ammonia over a photocatalyst immobilized on foam.

### 3. Results and Discussion

#### 3.1. Structural and Textural Properties of Photocatalysts in Its Powder Form

**Figure S3.** Raman spectra of  $\text{TiO}_2$ ,  $\text{La/TiO}_2$ , and  $\text{Nd/TiO}_2$  photocatalysts.

**Table S1.** Surface concentration of Ti and O elements determined by XPS.

| Photocatalyst              | $\text{Ti}^{4+}$ in $\text{TiO}_2$<br>(at.%) | Oxygen                            |                         | Total O<br>(at.%) | Carbon<br>(at.%) |
|----------------------------|----------------------------------------------|-----------------------------------|-------------------------|-------------------|------------------|
|                            |                                              | Lattice $\text{O}^{2-}$<br>(at.%) | $\text{OH}^-$<br>(at.%) |                   |                  |
| $\text{TiO}_2$             | 27.4                                         | 54.77                             | 8.61                    | 63.4              | 9.2              |
| 0.1 wt.% $\text{La/TiO}_2$ | 27.8                                         | 57.63                             | 6.10                    | 63.7              | 8.4              |
| 0.1 wt.% $\text{Nd/TiO}_2$ | 27.6                                         | 57.02                             | 6.56                    | 63.6              | 8.8              |
