Section S1: Synthesis method of as-prepared samples

Cerium oxides (CeO_x) was prepared using sol-gel method. The different reaction occurs during the preparation are:

- ✚ Step 1: Dissolution of the precursor for homogeneity
- ✚ Step 2: Hydrolysis of the precursor in NaOH
- ✚ Step 3: condensation using ethanol and ammoniac sodium
- ✚ Step 4: Vaporization of the solvent and the gel formation
- ✚ Step 5: calcination and growth of the particle

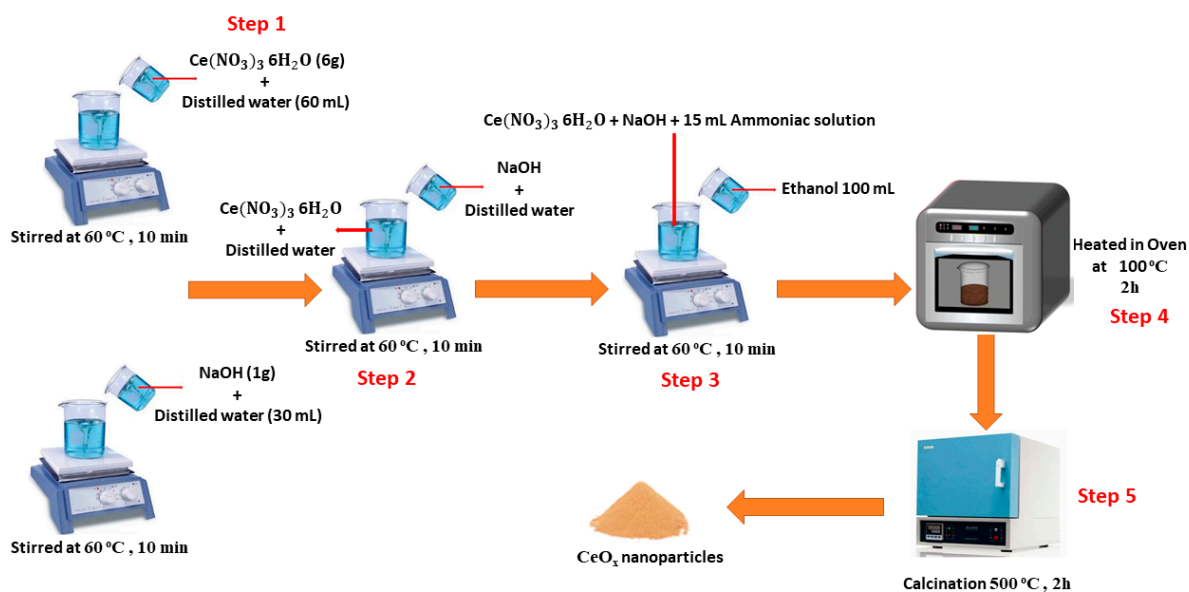

Figure S1. Sol-gel setup for the nanoparticles catalyst preparation [1, 2].

Section S2: Experimental setup for catalytic tests

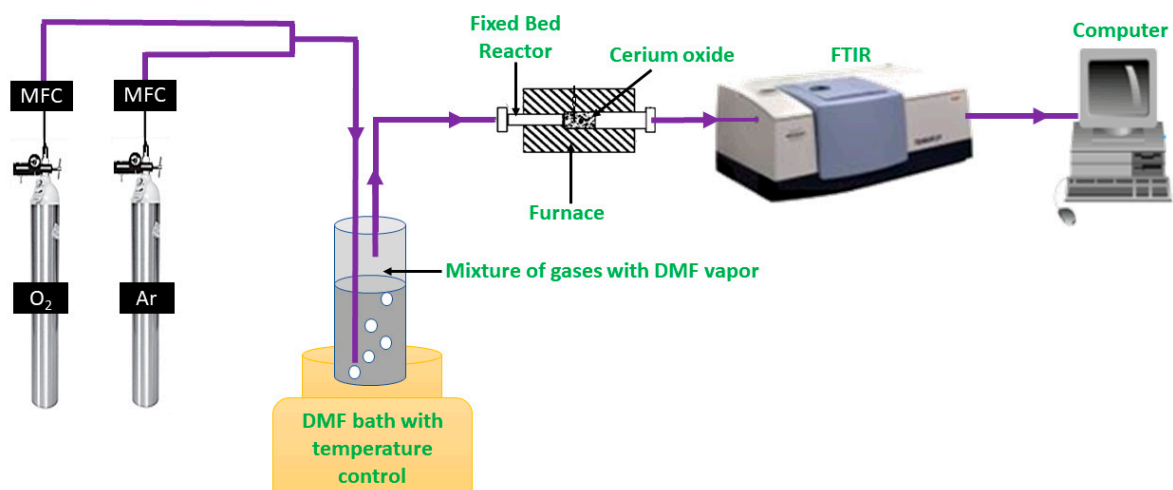

Figure S2. The catalytic test system is connected to the FTIR setup for the exhaust gas analysis.

Section S3: Catalyst structure

Figure S3: BET surface area analysis of CeO_x: Adsorption-desorption isotherms curves.

Figure S4: Pore size distribution.

Section S4: Catalytic performance

Figure S5: Reproducibility of the selectivity of the products.
