

Supplementary Material

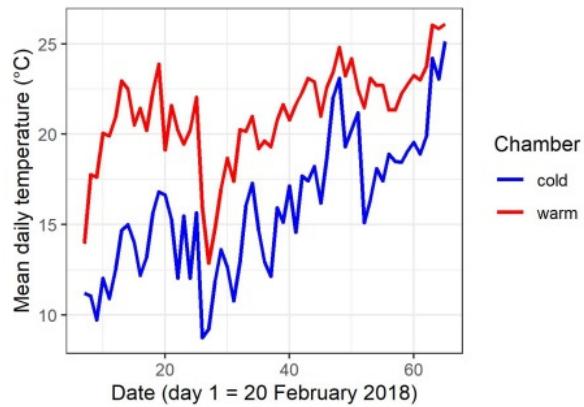

Figure S1. Mean daily temperatures in the two growth chambers in the spring of 2018.

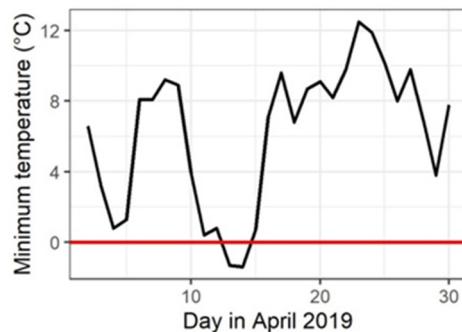

Figure S2. Daily minimum temperatures at Destelbergen in the spring of 2019 (9 km from the trial).

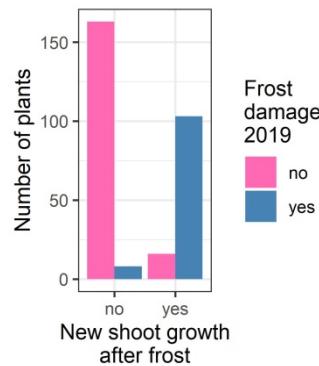

Figure S3. Number of plants that displayed frost damage versus number of plants that produced new shoot growth after the frost event.

Table S1. Number of seedlings according to the temperature treatment in the spring of 2018 and the presence/absence of frost damage in the spring of 2019.

Temperature treatment spring 2018	Frost damage spring 2019	n° of plants
cold	no	81
cold	yes	65
warm	no	98
warm	yes	46

Table S2. Model statistics for the response variables height increment and diameter increment in 2018.

H_1 is the plant height at the beginning of 2018, T is the temperature treatment in the spring of 2018 (categorical variable with the cold condition as standard level to which the warm condition is compared) and P is the provenance (categorical variable with Sonian as the standard provenance to which the other provenances are compared). Abbreviations of provenances are in Table 1.

Table S3. Model statistics for the response variables height increment and diameter increment in 2019.

H_2 is the plant height at the beginning of 2019, T is the temperature treatment in the spring of 2018 (categorical variable with the cold condition as standard level to which the warm condition is compared), Fr is frost damage occurrence after the late spring frost in 2019 (categorical variable with frost damage as the standard level to which no frost damage is compared) and P is the provenance (categorical variable with Sonian as the standard provenance to which the other provenances are compared). Abbreviations of provenances are in Table 1.
