

Supplementary Figure S1. Pathogenicity of MASCV2-p25 in young BALB/c mice. Survival rate (left panel) and body weight changes (right panel) of MASCV2-p25-infected mice. Four mice per group of young (6-week-old) BALB/c mice were intranasally infected with 10^1 to 10^5 PFU of MASCV2-p25, and survival and body weight were monitored daily for 12 days. The results are expressed as the mean \pm SD.
