Received: 16 May 2013 / Accepted: 16 May 2013 / Published: 22 May 2013

The following paragraphs are reproduced from the website of the publisher [1].

In recent years, air pollution has become a major worldwide concern. Air pollutants can affect metabolic activity, impede healthy development, and exhibit carcinogenic and toxic properties in humans. Over the past two decades, the use of microbes to remove pollutants from contaminated air streams has become a widely accepted and efficient alternative to the classical physical and chemical treatment technologies. Air Pollution Prevention and Control: Bioreactors and Bioenergy focusses on these biotechnological alternatives looking at both the optimization of bioreactors and the development of cleaner biofuels.

Structured in five parts, the book covers:

Fundamentals and microbiological aspects

Biofilters, bioscrubbers and other end-of-pipe treatment technologies

Specific applications of bioreactors

Biofuels production from pollutants and renewable resources (including biogas, biohydrogen, biodiesel and bioethanol) and its environmental impacts

Case studies of applications including biotrickling filtration of waste gases, industrial bioscrubbers applied in different industries and biogas upgrading

Air Pollution Prevention and Control: Bioreactors and Bioenergy is the first reference work to give a broad overview of bioprocesses for the mitigation of air pollution. Primarily intended for researchers and students in environmental engineering, biotechnology and applied microbiology, the book will also be of interest to industrial and governmental researchers.

Table of Contents

List of Contributors xix

Preface xxi

I FUNDAMENTALS AND MICROBIOLOGICAL ASPECTS 1

1 Introduction to Air Pollution 3

Christian Kennes and Maria C. Veiga

1.1 Introduction 3

1.2 Types and sources of air pollutants 3

1.2.1 Particulate matter 5

1.2.2 Carbon monoxide and carbon dioxide 6

1.2.3 Sulphur oxides 7

1.2.4 Nitrogen oxides 7

1.2.5 Volatile organic compounds (VOCs) 9

1.2.6 Odours 10

1.2.7 Ozone 11

1.2.8 Calculating concentrations of gaseous pollutants 11

1.3 Air pollution control technologies 11

1.3.1 Particulate matter 11

1.3.2 Volatile organic and inorganic compounds 12

1.3.2.1 Nonbiological processes 12

1.3.2.2 Bioprocesses 15

1.3.3 Environmentally friendly bioenergy 17

1.4 Conclusions 17

References 17

2 Biodegradation and Bioconversion of Volatile Pollutants 19

Christian Kennes, Haris N. Abubackar and Maria C. Veiga

2.1 Introduction 19

2.2 Biodegradation of volatile compounds 20

2.2.1 Inorganic compounds 20

2.2.1.1 Hydrogen sulphide (H₂S) 20

2.2.1.2 Ammonia 20

2.2.2 Organic compounds 21

2.2.2.1 C_xH_y pollutants 22

2.2.2.2 C_xH_yO_z pollutants 22

2.2.2.3 Organic sulphur compounds 22

2.2.2.4 Halogenated organic compounds 23

2.3 Mass balance calculations 24

2.4 Bioconversion of volatile compounds 25

2.4.1 Carbon monoxide and carbon dioxide 25

2.4.2 Volatile organic compounds (VOCs) 26

2.5 Conclusions 27

References 27

3 Identification and Characterization of Microbial Communities in Bioreactors 31

Luc Malhautier, L. Cabrol, S. Bayle and J.-L. Fanlo

3.1 Introduction 31

3.2 Molecular techniques to characterize the microbial communities in bioreactors 32

3.2.1 Quantification of the community members 32

3.2.1.1 Microscopic direct counts 32

3.2.1.2 Quantitative PCR 33

3.2.2 Assessment of microbial community diversity and structure 34

3.2.2.1 Biochemical methods 34

3.2.2.2 Genetic fingerprinting methods 34

3.2.2.3 Analysis of fingerprint data by multivariate statistical tools and diversity indices 38

3.2.3 Determination of the microbial community composition 39

3.2.3.1 Construction of small sub-unit (SSU) rRNA clone libraries followed by phylogenetic identification by randomly sequencing the clones 39

3.2.3.2 Fluorescent in situ hybridization (FISH) 39

3.2.4 Techniques linking microbial identity to ecological function 40

3.2.4.1 Stable isotope probing (SIP) 40

3.2.4.2 Microautoradiography combined with FISH (FISH-MAR) 41

3.2.5 Microarray techniques 41

3.2.6 Synthesis 42

3.3 The link of microbial community structure with ecological function in engineered ecosystems 42

3.3.1 Introduction 42

3.3.2 Temporal and spatial dynamics of the microbial community structure under stationary conditions in bioreactors 43

3.3.2.1 Temporal stability and dynamics of the total bacterial community structure in the steady state 43

3.3.2.2 Microbial and functional stratification along the biofilter height 45

3.3.2.3 The microbial community structure–ecosystem function relationship 45

3.3.3 Impact of environmental disturbances on the microbial community structure within bioreactors 45

3.3.4 Conclusions 47

References 47

II BIOREACTORS FOR AIR POLLUTION CONTROL 57

4 Biofilters 59

Eldon R. Rene, Maria C. Veiga and Christian Kennes

4.1 Introduction 59

4.2 Historical perspective of biofilters 59

4.3 Process fundamentals 60

4.4 Operation parameters of biofilters 62

- 4.4.1 Empty-bed residence time (EBRT) 62
- 4.4.2 Volumetric loading rate (VLR) 63
- 4.4.3 Mass loading rate (MLR) 63
- 4.4.4 Elimination capacity (EC) 63
- 4.4.5 Removal efficiency (RE) 63
- 4.4.6 CO₂ production rate (PCO₂) 63
- 4.5 Design considerations 64
 - 4.5.1 Reactor sizing 64
 - 4.5.2 Irrigation system 66
 - 4.5.3 Leachate collection and disposal 66
- 4.6 Start-up of biofilters 68
- 4.7 Parameters affecting biofilter performance 70
 - 4.7.1 Inlet concentrations and pollutant load 70
 - 4.7.2 Composition of waste gas and interaction patterns 71
 - 4.7.3 Biomass support medium 72
 - 4.7.4 Temperature 75
 - 4.7.5 pH 78
 - 4.7.6 Oxygen availability 79
 - 4.7.7 Nutrient availability 80
 - 4.7.8 Moisture content and relative humidity 81
 - 4.7.9 Polluted gas flow direction 83
 - 4.7.10 Carbon dioxide generation rates 83
 - 4.7.11 Pressure drop 85
- 4.8 Role of microorganisms and fungal growth in biofilters 87
- 4.9 Dynamic loading pattern and starvation conditions in biofilters 89
- 4.10 On-line monitoring and control (intelligent) systems for biofilters 93
 - 4.10.1 On-line flame ionization detector (FID) and photo-ionization detector (PID) analysers 93
 - 4.10.2 On-line proton transfer reaction–mass spectrometry (PTR-MS) 94
 - 4.10.3 Intelligent moisture control systems 94
 - 4.10.4 Differential neural network (DNN) sensor 95
- 4.11 Mathematical expressions for biofilters 95
- 4.12 Artificial neural network-based models 97
 - 4.12.1 Back error propagation (BEP) algorithm 97
 - 4.12.2 Important considerations during neural network modelling 99
 - 4.12.2.1 Data selection, division and normalization 99
 - 4.12.2.2 Network parameters 100
 - 4.12.2.3 Sensitivity analysis of input parameters 101
 - 4.12.2.4 Estimating errors in prediction 102
 - 4.12.3 Neural network model development for biofilters and specific examples 103
- 4.13 Fuzzy logic-based models 105
- 4.14 Adaptive neuro-fuzzy interference system-based models for biofilters 108

4.15 Conclusions 111

References 111

5 Biotrickling Filters 121

Christian Kennes and Maria C. Veiga

5.1 Introduction 121

5.2 Main characteristics of BTFs 122

5.2.1 General aspects 122

5.2.2 Packing material 123

5.2.3 Biomass and biofilm 126

5.2.4 Trickling phase 126

5.2.5 Gas EBRT 128

5.2.6 Liquid and gas velocities 129

5.3 Pressure drop and clogging 130

5.3.1 Excess biomass accumulation 130

5.3.1.1 Limitation of biomass growth 131

5.3.1.2 Physical and chemical methods 132

5.3.1.3 Biological methods – predation 132

5.3.1.4 Cleaning the packing material outside the reactor 133

5.3.2 Accumulation of solid chemicals 133

5.4 Full-scale applications and scaling up 134

5.5 Conclusions 135

References 135

6 Bioscrubbers 139

Pierre Le Cloirec and Philippe Humeau

6.1 Introduction 139

6.2 General approach of bioscrubbers 140

6.3 Operating conditions 141

6.3.1 Absorption column 142

6.3.2 Biodegradation step – activated sludge reactor 143

6.4 Removing families of pollutants 143

6.4.1 Volatile organic compound (VOC) removal 144

6.4.2 Odor control 146

6.4.3 Sulfur compounds degradation 146

6.4.3.1 Sulfur compounds present in air 146

6.4.3.2 Biogas desulfurization 147

6.4.3.3 Ammonia absorption and bio-oxidation 147

6.5 Treatment of by-products generated by bioscrubbers 148

6.6 Conclusions and trends 148

References 149

7 Membrane Bioreactors 155

Raquel Lebrero, Raúl Muñoz, Amit Kumar and Herman Van Langenhove

7.1 Introduction 155

7.2 Membrane basics	156
7.2.1 Types of membranes	156
7.2.1.1 Porous membranes	157
7.2.1.2 Dense membranes	157
7.2.1.3 Composite membranes	158
7.2.2 Membrane materials	159
7.2.3 Membrane characterization parameters	159
7.2.3.1 Membrane thickness	159
7.2.3.2 Membrane performance: selectivity and permeance	159
7.2.4 Mass transport through the membrane	160
7.2.4.1 Transport in porous membranes	162
7.2.4.2 Transport in homogeneous membranes	162
7.3 Reactor configurations	163
7.3.1 Flat-sheet membranes	164
7.3.1.1 Plate and frame modules	164
7.3.1.2 Spiral-wound modules	164
7.3.2 Tubular configuration membranes	165
7.3.2.1 Tubular modules	165
7.3.2.2 Capillary membrane modules	166
7.3.2.3 Hollow-fiber membrane modules	166
7.3.3 Membrane-based bioreactors	166
7.4 Microbiology	166
7.5 Performance of membrane bioreactors	168
7.5.1 Membrane-based bioreactors	168
7.5.2 Bioreactor operation: influence of the operating parameters	169
7.6 Membrane bioreactor modeling	170
7.7 Applications of membrane bioreactors in biological waste-gas treatment	172
7.7.1 Comparison with other technologies	172
7.8 New applications: CO ₂ –NO _x sequestration	173
7.8.1 NO _x removal	173
7.8.2 CO ₂ sequestration	176
7.9 Future needs	177
References	178
8 Two-Phase Partitioning Bioreactors	185
Hala Fam and Andrew J. Daugulis	
8.1 Introduction	185
8.2 Features of the sequestering phase – selection criteria	186
8.3 Liquid two-phase partitioning bioreactors (TPPBs)	187
8.3.1 Performance	187
8.3.2 Mass transfer	189
8.3.2.1 Mass transfer pathways and mechanisms	190
8.3.2.2 Substrate uptake mechanisms	191

8.3.2.3 Mass transfer of poorly soluble substrates and oxygen	192
8.3.2.4 Physical parameters affecting K_{la}	193
8.3.3 Modeling and design elements	194
8.3.4 Limitations and research opportunities	196
8.4 Solids as the partitioning phase	197
8.4.1 Rationale	197
8.4.2 Performance	197
8.4.3 Mass transfer	198
8.4.4 Modeling and design elements	199
8.4.5 Limitations and research opportunities	200
References	200
9 Rotating Biological Contactors	207
R. Ravi, K. Sarayu, S. Sandhya and T. Swaminathan	
9.1 Introduction	207
9.1.1 Limitations of conventional gas-phase bioreactors	208
9.2 The rotating biological contactor	209
9.2.1 Modified RBCs for waste-gas treatment	210
9.2.1.1 Generation of humidified VOC stream	210
9.2.1.2 Biofilm development and start-up	211
9.2.1.3 VOC removal studies	212
9.3 Studies on removal of dichloromethane in modified RBCs	213
9.3.1 Comparison of different bioreactors (biofilters, biotrickling filters, and modified RBCs)	215
9.3.2 Studies on removal of benzene and xylene in modified RBCs	216
9.3.3 Microbiological studies of biofilms	217
9.3.3.1 Phylogenetic analysis	219
References	219
10 Innovative Bioreactors and Two-Stage Systems	221
Eldon R. Rene, Maria C. Veiga and Christian Kennes	
10.1 Introduction	221
10.2 Innovative bioreactor configurations	222
10.2.1 Planted biofilter	222
10.2.2 Rotatory-switching biofilter	223
10.2.3 Tubular biofilter	224
10.2.4 Fluidized-bed bioreactor	225
10.2.5 Airlift and bubble column bioreactors	227
10.2.6 Monolith bioreactor	229
10.2.7 Foam emulsion bioreactor	231
10.2.8 Fibrous bed bioreactor	233
10.2.9 Horizontal-flow biofilm reactor	234
10.3 Two-stage systems for waste-gas treatment	235
10.3.1 Adsorption pre-treatment plus bioreactor	235

- 10.3.2 Bioreactor plus adsorption polishing 237
- 10.3.3 UV photocatalytic reactor plus bioreactor 237
- 10.3.4 Bioreactor plus bioreactor 240
- 10.4 Conclusions 242

III BIOPROCESSES FOR SPECIFIC APPLICATIONS 247

11 Bioprocesses for the Removal of Volatile Sulfur Compounds from Gas Streams 249

Albert Janssen, Pim L.F. van den Bosch, Robert Cornelis van Leerdam,
and Marco de Graaff

- 11.1 Introduction 249
- 11.2 Toxicity of VOSCs to animals and humans 250
- 11.3 Biological formation of VOSCs 251
- 11.4 VOSC-producing and VOSC-emitting industries 252
 - 11.4.1 VOSCs produced from biological processes 252
 - 11.4.2 Chemical processes and industrial applications 252
 - 11.4.3 Oil and gas 253
- 11.5 Microbial degradation of VOSCs 253
 - 11.5.1 Aerobic degradation 253
 - 11.5.2 Anaerobic degradation 254
 - 11.5.3 Degradation via sulfate reduction 255
 - 11.5.4 Anaerobic degradation of higher thiols 255
 - 11.5.5 Inhibition of microorganisms 256
- 11.6 Treatment technologies for gas streams containing volatile sulfur compounds 256
 - 11.6.1 Biofilters 256
 - 11.6.2 Bioscrubbers 258
- 11.7 Operating experience from biological gas treatment systems 261
 - 11.7.1 Shell–Paques process for H₂S removal 266
- 11.8 Future developments 266

18.3.3.2 Mass transfer limitations	447
18.3.3.3 Fermentation media composition	448
18.3.3.4 Effect of gas composition	449
18.3.3.5 Media redox potential	449
18.4 Demonstration projects	450
18.5 Comparison of conventional fuels and bioethanol (corn, cellulosic, syngas) on air pollution	451
18.6 Key problems and future research needs	455
18.7 Conclusions	456
References	456
V CASE STUDIES	465
19 Biotrickling Filtration of Waste Gases from the Viscose Industry	467
Andreas Willers, Christian Dressler and Christian Kennes	
19.1 The waste-gas situation in the viscose industry	467
19.1.1 The viscose process	467
19.1.2 Overview of emission points	468
19.1.3 Technical solutions to treat the emissions	469
19.1.3.1 CS ₂ condensation	469
19.1.3.2 Wet catalytic oxidation	469
19.1.3.3 Regenerative adsorption	470
19.1.3.4 Thermal oxidation	470
19.1.3.5 Scrubbers	470
19.1.4 Potential to use biotrickling filters in the viscose industry	470
19.2 Biological CS ₂ and H ₂ S oxidation	471
19.3 Case study of biological waste-gas treatment in the casing industry	472
19.3.1 Products from viscose	472
19.3.2 Process flowsheet of fibre-reinforced cellulose casing (FRCC)	473
19.3.2.1 Production of viscose	473
19.3.2.2 Production of fibre-reinforced cellulose casing	473
19.3.3 Alternatives for biotrickling filter configurations	473
19.3.4 Characteristics of the CaseTech plant	475
19.3.5 Description of the BioGat installation	475
19.3.6 Performance of the BioGat process	475
19.3.6.1 Start-up problems	475
19.3.6.2 Reasons for increasing pressure drop	475
19.3.6.3 Tower packing material	479
19.3.6.4 Influence of sulphuric acid on biological degradation	480
19.3.6.5 Removal efficiency	481
19.4 Conclusions	484
References	484

20 Biotrickling Filters for Removal of Volatile Organic Compounds from Air in the Coating Sector	485
Carlos Lafita, F. Javier A'lvarez-Hornos, Carmen Gabaldo'n, Vicente Mart'inez-Soria and Josep-Manuel Penya-Roja	
20.1 Introduction	485
20.2 Case study 1: VOC removal in a furniture facility	486
20.2.1 Characterization of the waste-gas sources	486
20.2.2 Design and operation of the system	487
20.2.3 Performance data	488
20.2.4 Economic aspects	490
20.3 Case study 2: VOC removal in a plastic coating facility	491
20.3.1 Characterization of the waste-gas sources	492
20.3.2 Design and operation of the system	492
20.3.3 Performance data	493
20.3.4 Economic aspects	495
References	496
21 Industrial Bioscrubbers for the Food and Waste Industries	497
Pierre Le Cloirec and Philippe Humeau	
21.1 Introduction	497
21.2 Food industry emissions	498
21.2.1 Identification and quantification of waste-gas emissions	498
21.2.2 Choice of the technology	499
21.2.3 Design and operating conditions	500
21.2.3.1 Gas–liquid transfer	500
21.2.3.2 Biological regeneration of the washing solution	500
21.2.4 Performance of the system	501
21.3 Bioscrubbing treatment of gaseous emissions from waste composting	502
21.3.1 Waste-gas emissions: nature, concentrations, and flow	503
21.3.2 Choice of the gas treatment process	504
21.3.3 Design and operating conditions	505
21.3.4 Gas collection system	506
21.3.5 Gas treatment system	508
21.3.6 Performance of the overall system	509
21.4 Conclusions and perspectives	510
References	511
22 Desulfurization of biogas in biotrickling filters	513
David Gabriel, Marc A. Deshusses and Xavier Gamisans	
22.1 Introduction	513
22.2 Microbiology and stoichiometry of sulfide oxidation	514
22.2.1 Microbiology of sulfide oxidation	514
22.2.2 Stoichiometry of sulfide biological oxidation	515
22.3 Case study background and description of biotrickling filter	517

- 22.3.1 Site description 517
- 22.3.2 Biotrickling filter design 517
- 22.4 Operational aspects of the full-scale biotrickling filter 519
 - 22.4.1 Start-up and biotrickling filter performance 519
 - 22.4.2 Facing operational and design challenges 520
- 22.5 Economic aspects of desulfurizing biotrickling filters 522

- 23.1 Introduction 525
- 23.2 Case 1: Zalaegerszeg, PWS system with car fuelling station 526
 - 23.2.1 Biogas composition and biomethane requirements at Zalaegerszeg 526
 - 23.2.2 Plant configuration at Zalaegerszeg 526
 - 23.2.2.1 Pre-treatment at Zalaegerszeg 528
 - 23.2.2.2 Upgrading technique at Zalaegerszeg 528
 - 23.2.2.3 Post-treatment at Zalaegerszeg 529
 - 23.3 Case 2: Zwolle, PWS system with gas grid injection 529
 - 23.3.1 Biogas composition and biomethane requirements at Zwolle 531
 - 23.3.2 Plant configuration at Zwolle 531
 - 23.3.2.1 Pre-treatment at Zwolle 532
 - 23.3.2.2 Upgrading technique at Zwolle 532
 - 23.3.2.3 Post-treatment at Zwolle 533
 - 23.4 Case 3: Wijster, PWS system with gas grid injection 534
 - 23.4.1 Biogas composition and biomethane requirements at Wijster 534
 - 23.4.2 Plant configuration at Wijster 534
 - 23.4.2.1 Pre-treatment at Wijster 535
 - 23.4.2.2 Upgrading technique at Wijster 536
 - 23.4.2.3 Post-treatment at Wijster 536
 - 23.5 Case 4: Poundbury, MS system with gas grid injection 536
 - 23.5.1 Biogas composition and biomethane requirements at Poundbury 537
 - 23.5.2 Plant configuration at Poundbury 537
 - 23.5.2.1 Pre-treatment at Poundbury 538
 - 23.5.2.2 Upgrading technique at Poundbury 538
 - 23.5.2.3 Post-treatment at Poundbury 538
 - 23.6 Configuration overview and evaluation 539
 - 23.7 Capital and operational expenses 540
 - 23.7.1 Zalaegerszeg 540
 - 23.7.2 Zwolle 541
 - 23.7.3 Wijster 541
 - 23.7.4 Poundbury 541
 - 23.7.5 Overview table of capital and operating expenses 541
 - 23.8 Conclusions 542
