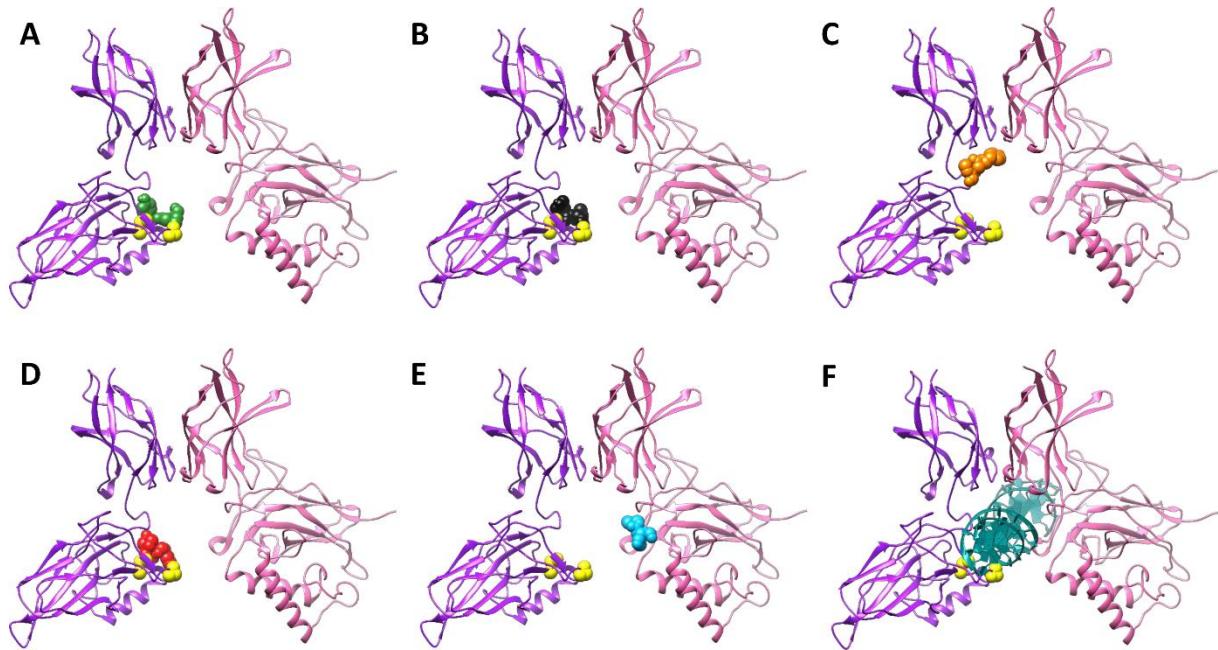

Figure S1. Oleocanthal (OC)-p50/p56 complexes analyzed with Molecular dynamics (MD). The five OC-p50/p56 complexes studied with MD simulations are shown, together with the DNA fragment bound to the heterodimer in the reference X-ray structure. In complex 1 (A), complex 2 (B), complex 3 (C), complex 4 (D) and complex 5 (E), the ligand is shown as spheres and colored green, black, orange, red and blue, respectively, while the bound DNA fragment (F) is colored in dark cyan. In all complexes, the p50 and p56 subunits are shown as pink and purple ribbons respectively, while cys38 and cys120 are shown as yellow spheres.

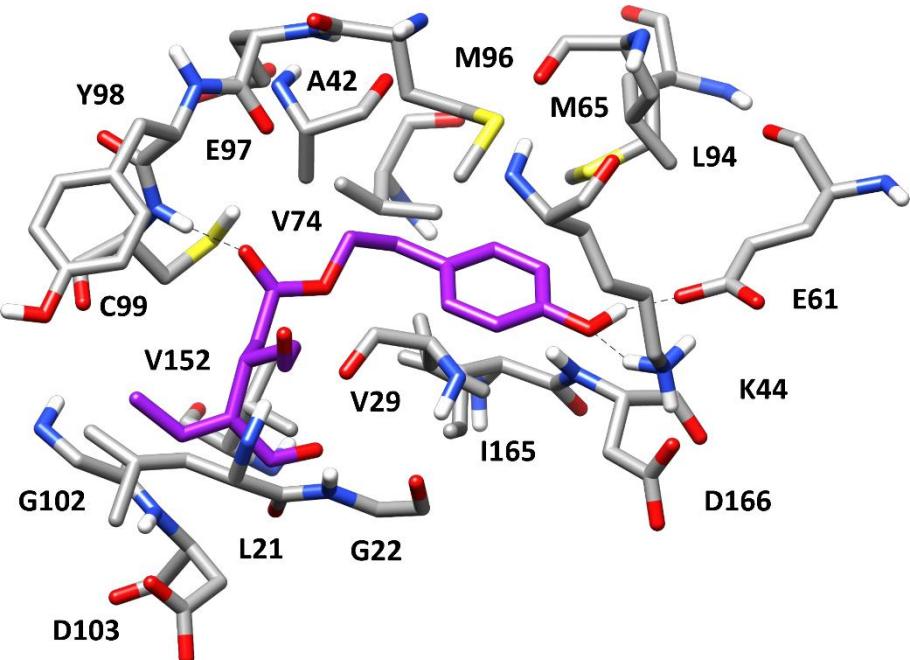

Figure S2. Minimized average structure of OC bound to IKK β catalytic site, derived from the last 20 ns of MD simulation. Hydrogen bonds are represented as black dashed lines.

Table S3. Molecular Mechanic-Poisson Boltzmann surface area (MM-PBSA) evaluation. MM-PBSA results for four analyzed oleocanthal (OC)-p50/p65 complexes. Δ PBSA is the sum of the electrostatic (ELE), van der Waals (VDW), polar (EPB) and non-polar (ENPOLAR) solvation free energy. Data are expressed as kcal•mol⁻¹.

	ELE	VDW	ENPOLAR	EPB	Δ PBSA
