Data for age and BMI are means ± standard deviations, or range. F = female; M = male; Nw = normal weight; Ow = overweight; Ob = obese; N-Ob = non-obese; Pre-R = before Ramadan; Post-R = end of Ramadan; Follow-up = 2-5 weeks after Ramadan; BMI = body mass index; \* = fasting time not given in study but inferred based on year and location of study.

Table S1b. Details of weight and body composition from all included publications.

Data are means  $\pm$  standard deviations. F = female; M = male; Nw = normal weight; Ow = overweight; Ob = obese; N-Ob = non-obese; Pre-R= before Ramadan; Post-R = end of Ramadan; Follow-up = 2-5 weeks after Ramadan.

**Figure S1.** Weight was significantly decreased by Ramadan fasting. Change in weight (kg) between pre-Ramadan (pre-R) and the end of Ramadan (post-R). Heterogeneity statistics: T = 0.586, p < 0.001,  $I^2 = 40.6\%$ . F = female; M = male; Nw = normal weight; Ow = overweight; Ob = obese; N-Ob = non-obese; 18-35, 36-70 = age range in years.

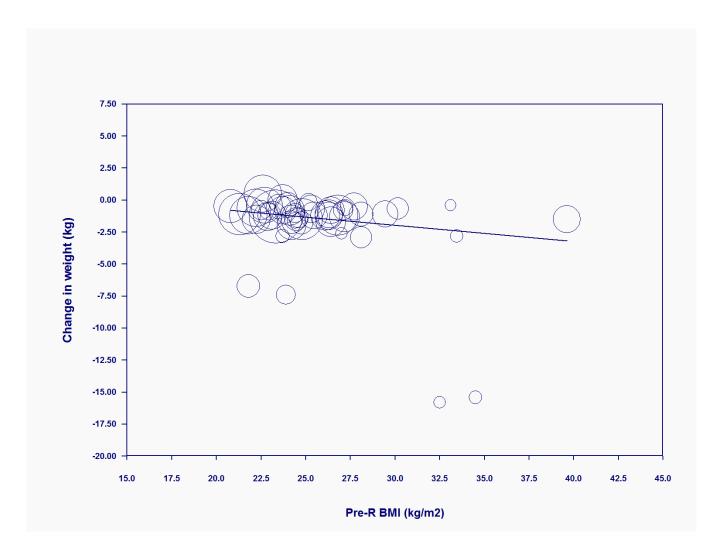

**Figure S2.** Weight was significantly reduced at 2-5 weeks after Ramadan fasting. Change in weight (kg) between pre-Ramadan (pre-R) and 2-5 weeks after Ramadan (follow-up). Heterogeneity statistics: T = 0.000, p = 0.940,  $I^2 = 0.0\%$ . F = female; M = male; Nw = normal weight; Ow = overweight; Ob = obese; N-Ob = non-obese.

**Figure S3.** Weight was significantly decreased by Ramadan fasting in both the normal weight and the overweight/obese subgroup by the end of Ramadan. Change in weight (kg) as subdivided by BMI category (normal weight and overweight/obese), between pre-Ramadan (pre-R) and the end of Ramadan (post-R). There was no significant difference between normal weight and overweight/obese subgroups (p = 0.217). Heterogeneity statistics: normal weight T = 1.607, p < 0.001,  $I^2 = 70.4\%$ ; overweight/obese T = 2.738, p < 0.001,  $I^2 = 74.4\%$ . F = female; M = male; Nw = normal weight; Ow = overweight; Ob = obese; N-Ob = non-obese.

**Figure S4.** Weight was not significantly reduced at 2-5 weeks after Ramadan in the normal weight or the overweight/obese subgroup. Change in weight (kg) as subdivided by BMI category (normal weight and overweight/obese), between pre-Ramadan (pre-R) and 2-5 weeks after Ramadan (follow-up). There was no significant difference between normal weight and overweight/obese subgroups (p = 0.547). Heterogeneity statistics: normal weight T = 0.000, p = 0.996,  $I^2 = 0.0\%$ ; overweight/obese T = 0.000, p = 0.968,  $I^2 = 0.0\%$ . F = female; M = male; Nw = normal weight; Ow = overweight; Ob = obese; N-Ob = non-obese.

**Figure S5.** Significant correlation between BMI before Ramadan fasting and mean weight change. Scatterplot of the meta-regression analysis for the correlation between BMI measured pre-Ramadan (pre-R) and weight change from pre-R to the end of Ramadan (post-R) for each of the 51 comparison groups taken from publications that obtained both pre-R BMI and weight data at these two time points (pre-R and post-R). The area of each circle represents the percentage weight contributed by each study to the overall meta-regression, with larger circles representing greater weight contributions. The correlation was statistically significant (p = 0.045). Heterogeneity statistics: T = 0.726, p = 0.002,  $I^2 = 40.85\%$ . BMI = body mass index.

**Figure S6.** Weight was significantly decreased by Ramadan fasting in both the female and the male subgroup. Change in weight (kg) as subdivided by sex (female and male), between pre-Ramadan (pre-R) and end of Ramadan (post-R). There was no significant difference between female and male subgroups (p = 0.829). Heterogeneity statistics: female T = 1.376, p = 0.001,  $I^2 = 59.5\%$ ; male T = 0.628, p = < 0.001,  $I^2 = 50.8\%$ . F = female; M = male; Nw = normal weight; Ow = overweight; Ob = obese; N-Ob = non-obese; 18-35, 36-70 = age range in years.

**Figure S8.** Weight was significantly decreased by Ramadan fasting in the the Middle East + North Africa, South Asia, and South East Asia, but not in the Westernized countries subgroup. Change in weight (kg) as subdivided by location category (Middle East + North Africa, South Asia, South East Asia, and Westernized countries), between pre-Ramadan (pre-R) and the end of Ramadan (post-R). There was no significant difference between subgroups (p = 0.069). Heterogeneity statistics: Middle East + North Africa T = 0.185, p = 0.322,  $I^2 = 7.4\%$ ; South Asia T = 0.000, p = 0.744,  $I^2 = 0.0\%$ ; South East Asia T = 9.667, p = <0.001,  $I^2 = 83.8\%$ ; Westernized countries T = 0.000, p = 0.979,  $I^2 = 0.0\%$ . F = female; M = male; Nw = normal weight; Ow = overweight; Ob = obese; N-Ob = non-obese; 18-35, 36-70 = age range in years; ME + NA = Middle East + North Africa; SA = South Asia; SEA = South East Asia; WC = westernized countries.

**Figure S9.** Weight was not significantly reduced at 2-5 weeks after Ramadan only in the Middle East + North Africa but not in any other subgroup. Change in weight (kg) as subdivided by location category (Middle East + North Africa, South Asia, South East Asia and Westernized countries), between pre-Ramadan (pre-R) and 2-5 weeks after Ramadan (follow-up). Heterogeneity statistics: Middle East + North Africa T = 0.000, p = 0.785,  $I^2 = 0.0\%$ ; South Asia T = 0.000, p = 0.781,  $I^2 = 0.0\%$ ; South East Asia T = 0.000, p = 0.986,  $I^2 = 0.0\%$ ; Westernized countries T = 0.000, p = 0.983,  $I^2 = 0.0\%$ . F = female; M = male; Nw = normal weight; Ow = overweight; Ob = obese; N-Ob = non-obese; ME + NA = Middle East + North Africa; SA = South Asia; SEA = South East Asia; WC = westernized countries.

## (b)

**Figure S10.** There was no significant correlation between fasting time and mean weight change, either when using only published mean fasting times (a), or when using both published and inferred mean fasting times (b). Scatterplot of the meta-regression analysis for the correlation between fasting time and weight change from pre-Ramadan (pre-R) to the end of Ramadan (post-R) for each of the 42 (a) or 75 (b) comparison groups from publications that obtained both fasting time and weight data at these two time points (pre-R and post-R). The area of each circle represents the percentage weight contributed by each study to the overall meta-regression, with larger circles representing greater weight contributions. The correlation was not statistically significant for either meta-regression (p = 0.226 and p = 0.794 for (a) and (b), respectively). Heterogeneity statistics: T = 0.143, p = 0.395,  $I^2 = 4.2\%$  and T = 0.693, p < 0.001,  $I^2 = 46.5\%$  for (a) and (b) respectively.

|------------------------------------|----|---|-----------|
| TITLE                              | _  |   | on page # |
| Title                              | 1  | Identify the report as a systematic review, meta-analysis, or both.   | 1         |
| ABSTRACT                           | •  |   |           |
| Structured summary                 | 2  | Provide a structured summary including, as applicable: background; objectives; data sources; study eligibility criteria, participants, and interventions; study appraisal and synthesis methods; results; limitations; conclusions and implications of key findings; systematic review registration number. |           |
| INTRODUCTION                       | ÷  |   |           |
| Rationale                          | 3  | Describe the rationale for the review in the context of what is already known.  | 2         |
| Objectives                         | 4  | Provide an explicit statement of questions being addressed with reference to participants, interventions, comparisons outcomes, and study design (PICOS).   |           |
| METHODS                            |    |   |           |
| Protocol and registration          | 5  | Indicate if a review protocol exists, if and where it can be accessed (e.g., Web address), and, if available, provide registration information including registration number.   |           |
| Eligibility criteria               | 6  | Specify study characteristics (e.g., PICOS, length of follow-up) and report characteristics (e.g., years considered, language, publication status) used as criteria for eligibility, giving rationale.  |           |
| Information sources                | 7  | Describe all information sources (e.g., databases with dates of coverage, contact with study authors to identify additional studies) in the search and date last searched.  |           |
| Search                             | 8  | Present full electronic search strategy for at least one database, including any limits used, such that it could be repeated.   |           |
| Study selection                    | 9  | State the process for selecting studies (i.e., screening, eligibility, included in systematic review, and, if applicable, included in the meta-analysis).   |           |
| Data collection process            | 10 | Describe method of data extraction from reports (e.g., piloted forms, independently, in duplicate) and any processes for obtaining and confirming data from investigators.  |           |
| Data items                         | 11 | List and define all variables for which data were sought (e.g., PICOS, funding sources) and any assumptions and simplifications made.   |           |
| Risk of bias in individual studies | 12 | Describe methods used for assessing risk of bias of individual studies (including specification of whether this was done at the study or outcome level), and how this information is to be used in any data synthesis.  |           |
| Summary measures                   | 13 | State the principal summary measures (e.g., risk ratio, difference in means).   | 4         |
| Synthesis of results               | 14 | Describe the methods of handling data and combining results of studies, if done, including measures of consistency (e.g., I²) for each meta-analysis.   | 4-5       |

| Section/topic                 | #        | Checklist item   |       |
|-------------------------------|----------|--|-------|
| Risk of bias across studies   | 15       | Specify any assessment of risk of bias that may affect the cumulative evidence (e.g., publication bias, selective reporting within studies).   | 4     |
| Additional analyses           | 16       | Describe methods of additional analyses (e.g., sensitivity or subgroup analyses, meta-regression), if done, indicating which were pre-specified.   |       |
| RESULTS                       | -        |  |       |
| Study selection               | 17       | Give numbers of studies screened, assessed for eligibility, and included in the review, with reasons for exclusions at each stage, ideally with a flow diagram.  |       |
| Study characteristics         | 18       | For each study, present characteristics for which data were extracted (e.g., study size, PICOS, follow-up period) and provide the citations.   |       |
| Risk of bias within studies   | 19       | Present data on risk of bias of each study and, if available, any outcome level assessment (see item 12).  | _     |
| Results of individual studies | 20       | For all outcomes considered (benefits or harms), present, for each study: (a) simple summary data for each intervention group (b) effect estimates and confidence intervals, ideally with a forest plot. |       |
| Synthesis of results          | 21       | Present results of each meta-analysis done, including confidence intervals and measures of consistency.  |       |
| Risk of bias across studies   | 22       | Present results of any assessment of risk of bias across studies (see Item 15).  | _     |
| Additional analysis           | 23       | Give results of additional analyses, if done (e.g., sensitivity or subgroup analyses, meta-regression [see Item 16]).  |       |
| DISCUSSION                    | <u>.</u> |  |       |
| Summary of evidence           | 24       | Summarize the main findings including the strength of evidence for each main outcome; consider their relevance to key groups (e.g., healthcare providers, users, and policy makers).                     |       |
| Limitations                   | 25       | Discuss limitations at study and outcome level (e.g., risk of bias), and at review-level (e.g., incomplete retrieval of identified research, reporting bias).  |       |
| Conclusions                   | 26       | Provide a general interpretation of the results in the context of other evidence, and implications for future research.  | 15-17 |
| FUNDING                       |          |  |       |
| Funding                       | 27       | Describe sources of funding for the systematic review and other support (e.g., supply of data); role of funders for the systematic review.   | 18    |
