

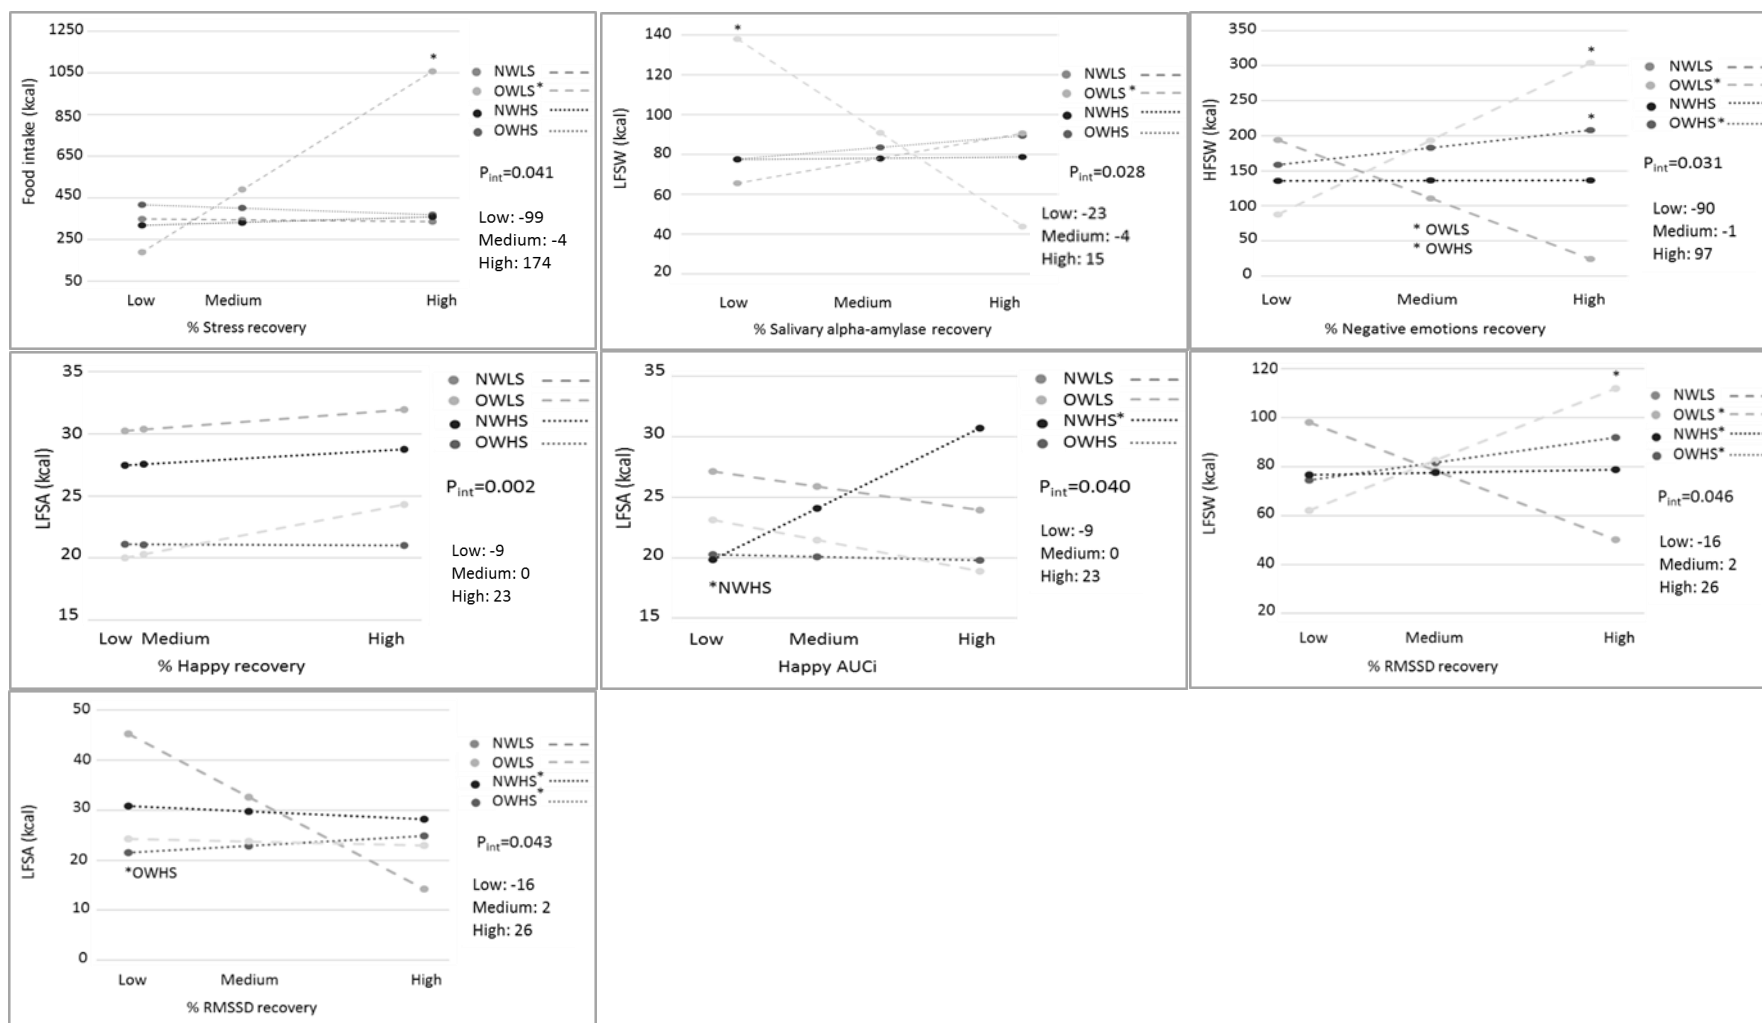

Figure S3: Moderating effects of stress measures: reactivity, recovery or AUCi on associations between chronic stress weight groups and food intake

Significant group differences are presented for the stress recovery/AUCi versus food intake relation or for food intake differences at specific stress reactivity levels, with NWLS as reference group. P_{int} = p-value of the group*reactivity interaction; NWLS=Normal Weight Low Stress; OWLS=Overweight Low Stress; NWHS=Normal Weight High Stress; OWHS=Overweight High Stress; HF: high fat; LF: low fat; SW: sweet; SA: savoury.
