

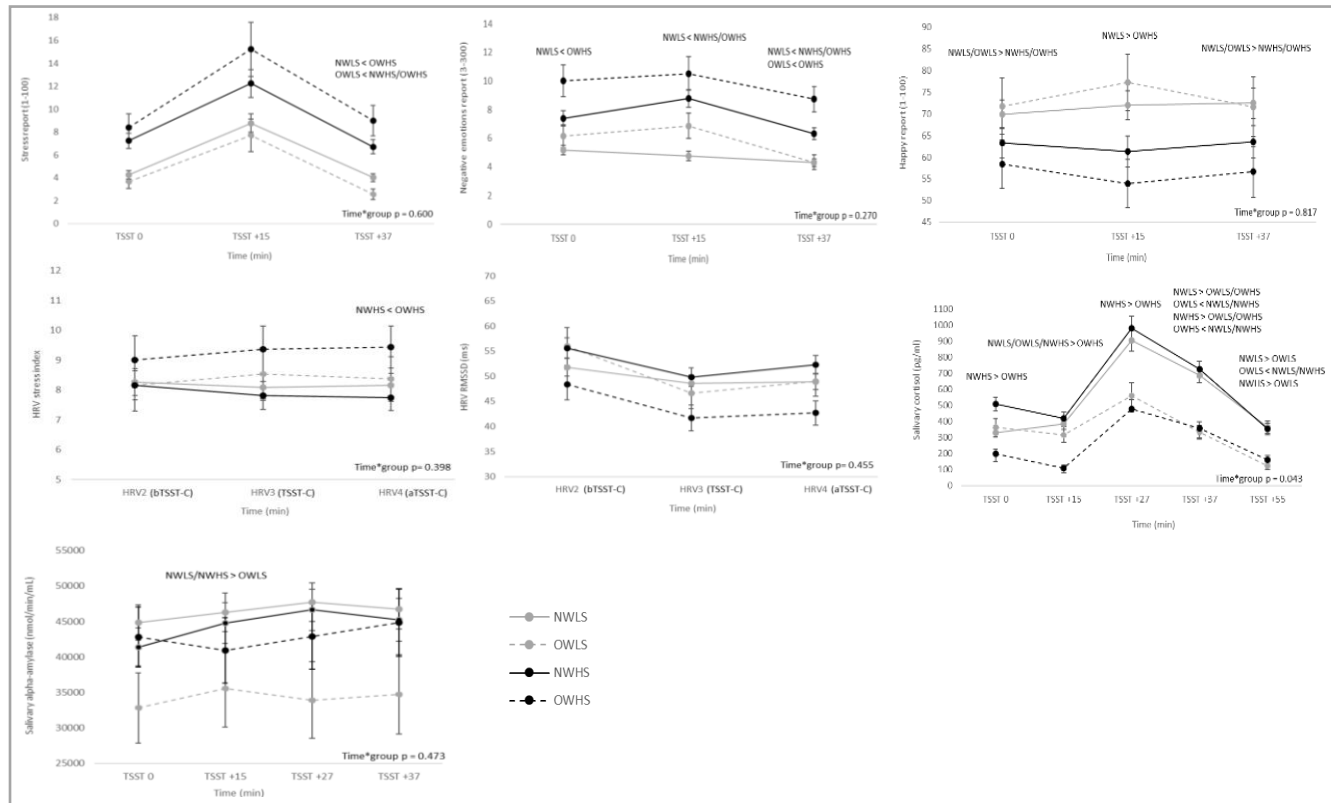

Figure S2. Group differences in stress reactivity/recovery by repeated measures ANOVA.

Differences (estimated marginal means and standard error) in stress reactivity/recovery between the four groups: Normal Weight Low Stress (NWLS), Overweight Low Stress (OWLS), Normal Weight High Stress (NWHS) and Overweight High Stress (OWHS) adolescents. Significant group differences ($p < 0.05$) are visualized per stress parameter at the corresponding timepoint/interval. TSST-C: Trier Social Stress Test – Children; bTSST-C: before TSST-C; aTSST-C: after TSST-C; RMSSD: Root Mean Square of the Successive Differences.
