Recessive model	AA	35 (39.3)	43 (44.8)	0.566	0.452

Data are expressed as absolute numbers and percentages by NAFLD severity group. * p-value of Fisher exact test. In the dominant model homozygotes and heterozygotes are compared with non-mutant (CT+TT vs. CC / GA+AA vs GG / TA+AA vs. TT), and in the recessive model homozygotes were compared with heterozygotes and non-mutant (TT vs. CT+CC / AA vs. GA+GG / AA vs. TA+TT). Abbreviations: SNP: single nucleotide polymorphism; NA: not applicable.
