Supplemental Table 4. Shifts in microbial taxa from BL to W4 in TOT mice. Values reported as median and standard error measurement.

Supplemental Figure 1. Volcano plots demonstrating differences in relative abundance between groups at W4 using DESeq2 analysis. **a.** CTR vs. PRE. **b.** CTR vs. POS. **c.** CTR vs. TOT. **d.** PRE vs. TOT. **e.** PRE vs TOT. **f.** POS vs. TOT.

Supplemental Figure 2. Differences in serum LPS between groups at W4. Box-and-whisker plots represent the distribution of each group at W4. The median is represented by the middle line while the upper and lower borders of the box plot identify the 75th and 25th percentile, respectively. The whiskers correspond to the maximal and minimal values.

Supplemental Figure 3. Perianastomotic ileal and colonic tissue histologic injury scoring and weight to length ratios. Box-and-whisker plots represent the distribution of each group at week 4. The median is represented by the middle line while the upper and lower borders of the box plot identify the 75th and 25th percentile, respectively. The whiskers correspond to the maximal and minimal values. **a-b.** Histologic injury scoring for ileal and colonic tissues, respectively. **c-d.** Weight to length ratio for ileal and colonic tissue, respectively.
