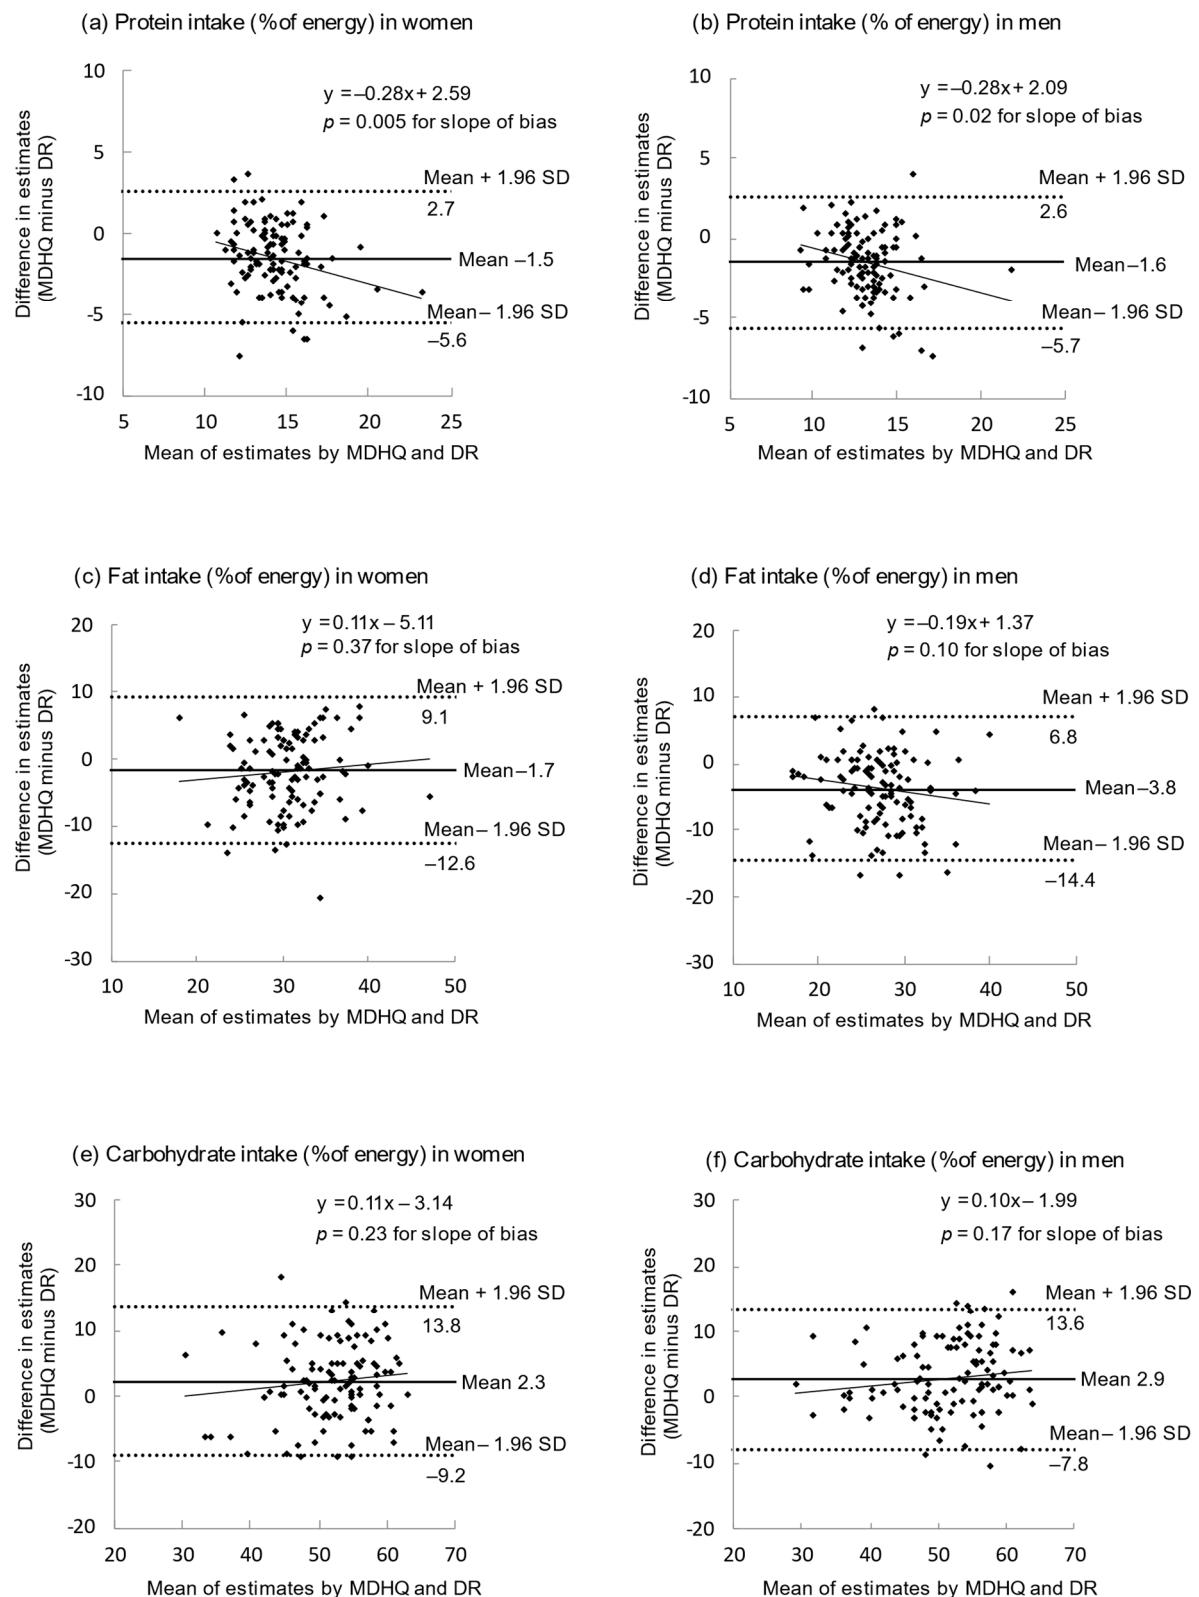

Figure S1. Bland-Altman plots assessing the agreement between estimates of energy-adjusted intakes of protein (a, b), fat (c, d), and carbohydrate (e, f) derived from the 4-day weighed dietary record (DR) and those derived from the paper version of the Meal-based Diet History Questionnaire (MDHQ) in 111 Japanese women and 111 Japanese men. Energy adjustment was done using the density model. SD, standard deviation.
