^aBased on double log-transformed energy adjusted nutrient intake by the residual method. ^bEPA, DHA, alcohol, vitamin K, thiamine, vitamin B6 and folate are based on crude nutrient intake and afterwards energy-adjusted by the residual method. ^cp-value , test of difference in intake between FFQbaseline and FFQ12months by Wilcoxon signed-rank test. ^dBland-Altman limits of agreement (LOA) are reported as percentage difference. ^eBland-Altman limits of agreement (LOA) are not reported as LOA depend on the level of the nutrient. ^fBland-Altman limits of agreement (LOA) are reported as unit difference.
