

Supplementary Materials

Table S1. The results of multiple comparisons and Bonferroni correction.

Characters	Multiple comparisons		
	Mild Cognitive Impairment vs. Normal	Moderate to Severe Cognitive Impairment vs. Normal	Moderate to Severe Cognitive Impairment vs. Mild Cognitive Impairment
Age, mean (SD)	<0.001	<0.001	<0.001
Age group, n (%)	<0.001	<0.001	0.007
Sex, n (%)	<0.001	<0.001	0.034
Ethnic group, n (%)	<0.001	<0.001	<0.001
Educational level, n (%)	<0.001	<0.001	<0.001
Occupation, n (%)	<0.001	<0.001	0.02
Spouse status, n (%)	<0.001	<0.001	<0.001
Longevity families, n (%)	<0.001	<0.001	0.32
Number of residual teeth, mean (SD)	<0.001	<0.001	0.006
Number of residual teeth, n (%)	<0.001	<0.001	0.016
Denture usage, n (%)	0.032	1	1
MNA-SF score, mean (SD)	<0.001	<0.001	<0.001
MNA-SF assessment status, n (%)	<0.001	<0.001	<0.001
Type of drinking water, n (%)	0.921	0.002	0.403
History of smoking, n (%)	<0.001	<0.001	1
History of alcohol use, n (%)	<0.001	<0.001	0.704
History of drinking tea, n (%)	<0.001	<0.001	0.199

Table S2. MNA-SF score as mediator of the effect of residual teeth on cognitive function.

		Model 1		Model 2	
		β	95% CI	β	95% CI
MNA-SF	ACME	-0.099	-0.114 to -0.084	-0.061	-0.076 to -0.046
score	ADE	-0.130	-0.164 to -0.097	-0.089	-0.126 to -0.050
	Total Effect	-0.229	-0.264 to -0.194	-0.150	-0.186 to -0.110
	Proportion Mediated	0.431	0.361 to 0.505	0.407	0.300 to 0.554

Mediation analysis statistic details were adjusted none covariate in Model 1, and were adjusted by denture usage, sex, age, ethnic groups, occupation, educational level, spouse status, longevity families, and life styles (type of drinking water, smoking, alcohol use and drinking tea) in Model 2. Abbreviations. ACME: average causal mediation effects (indirect effect); ADE: average direct effects; CI: confidence Interval.

Table S3. The mediating analysis in older adults stratified by age.

Group	Parameter	β	95% Confidence Interval
50-59 years	ACME	-0.0439	-0.0672 to -0.019
	ADE	-0.1285	-0.1888 to -0.0675
	Total Effect	-0.1724	-0.2363 to -0.1067
	Proportion Mediated	0.2548	0.1137 to 0.4335
60-69 years	ACME	-0.0834	-0.1053 to -0.0621
	ADE	-0.102	-0.1538 to -0.0486
	Total Effect	-0.1854	-0.2394 to -0.1301
	Proportion Mediated	0.4487	0.3256 to 0.6493
70-79 years	ACME	-0.1184	-0.1598 to -0.0797
	ADE	-0.0865	-0.1639 to -0.0084
	Total Effect	-0.2049	-0.2893 to -0.1189
	Proportion Mediated	0.5777	0.3889 to 0.935
80+ years	ACME	-0.2239	-0.3493 to -0.1117
	ADE	-0.2517	-0.4672 to -0.0439
	Total Effect	-0.4756	-0.7147 to -0.2499
	Proportion Mediated	0.4699	0.2589 to 0.8436

Table S4. The summary of structural equation model.

Pathway	Estimate	SE	z	P	LLCI	ULCI	β
