*Coordinates indicated in decimal degrees

Table S2. Multiple Reaction Monitoring (MRM) conditions for lipophilic toxins determination. Precursor ion Q1 = m/z ratio in the first quadrupole, Product ion Q3 = m/z ratio in the third quadrupole, RT (min) = retention time, DP(v) = declustering potential, EP(v) = entrance potential, CE(v) = collision energy, and CXP(v) = collision cell exit potential.

Toxins	Precursor ion Q1	Product ion Q3	RT (min)	DP (v)	EP (v)	CE (v)	CXP (v)	Polarity
