**Figure S1.** Macroscopic features of the experiment with bone metastasis development in HFD and ND rats. **(A)** Tumor development in rats after MDA-MD-231 cell inoculation—Tumor take rate. **(B)** Weight comparisons between HFD and ND in main and control experiments. Statistical analyses have been made with two-way ANOVA. Significant values are defined as  $p < 0.05$ . Values of  $p$  are indicated up to a value of 0.15.

**Table S1.** qPCR primers used for analysis of glycolytic and angiogenic genes.
