

Figure S1

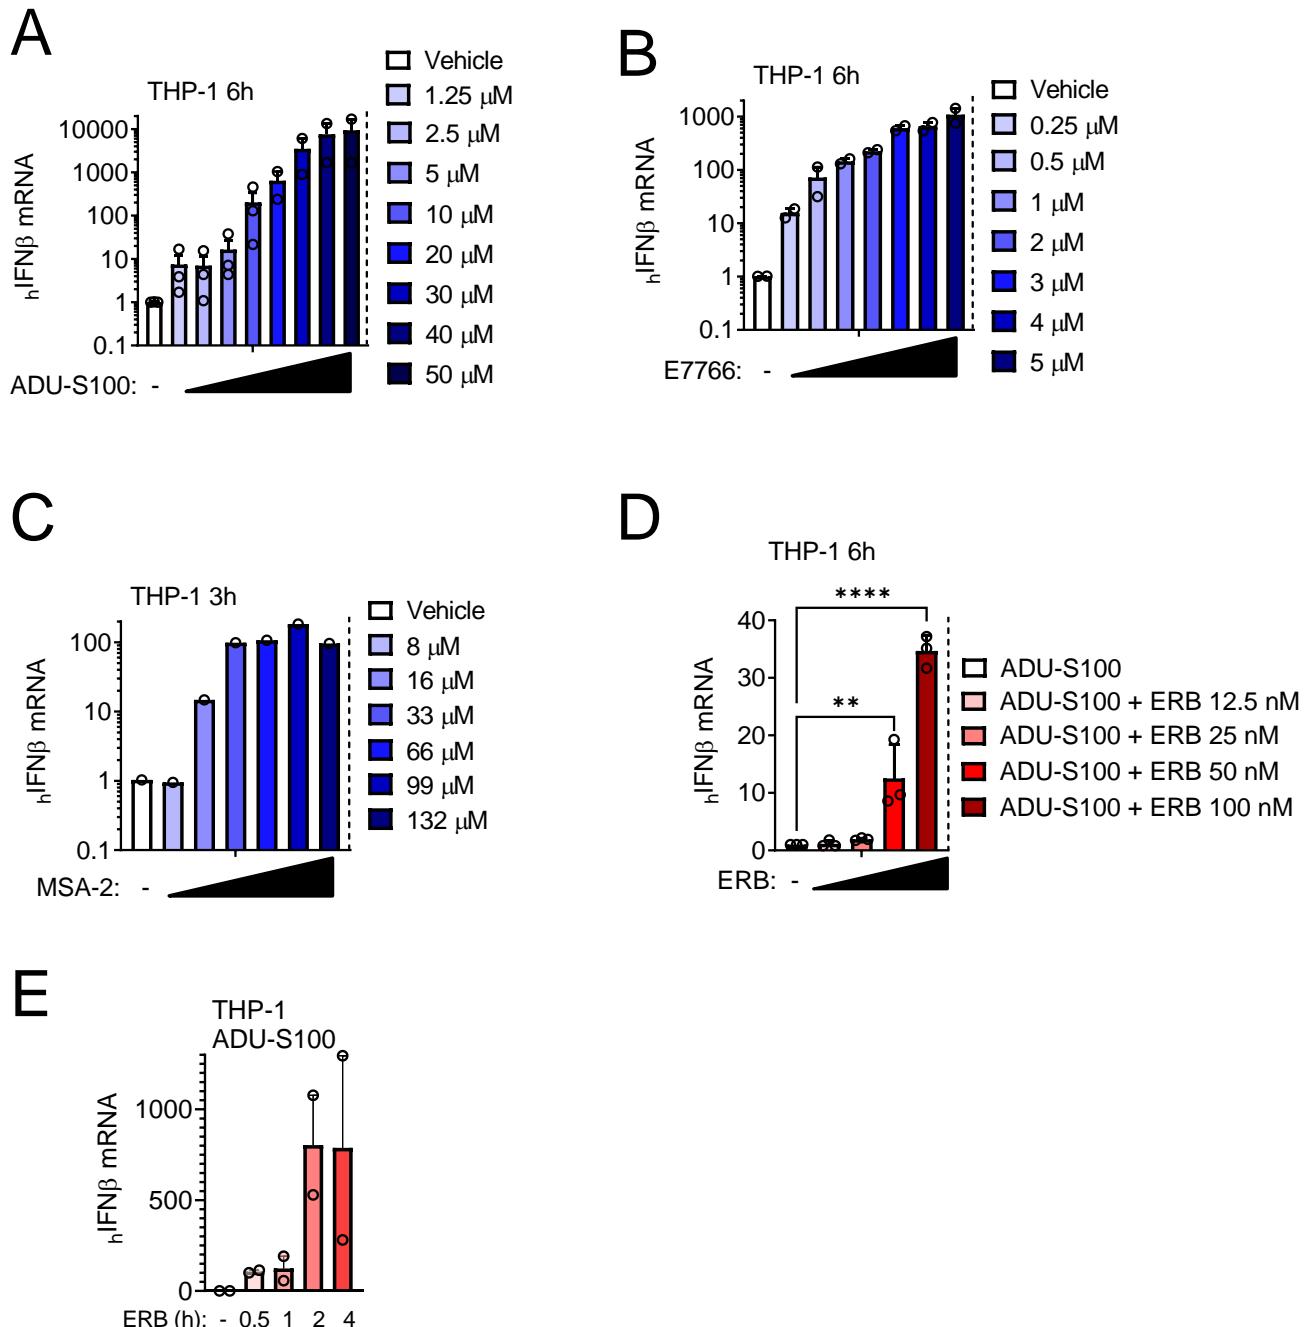

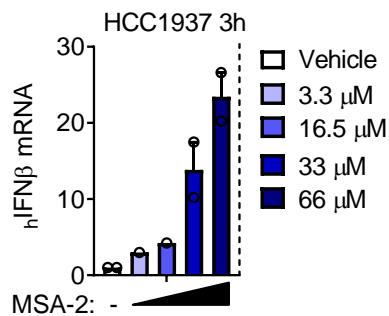

Figure S1. Concentration-dependence of STING agonists and eribulin on IFN β expression in THP-1 cells. Human IFN β mRNA expression in THP-1 cells treated with indicated concentrations of (A) ADU-S100 for 6 h, (B) E7766 for 6 h, or (C) MSA-2 for 3 h. (D) Human IFN β mRNA expression in THP-1 cells treated with 10 μ M ADU-S100 and indicated concentrations of eribulin (ERB) for 6 h. (E) Human IFN β mRNA expression in THP-1 cells treated with 10 μ M ADU-S100 for 6 h in combination with 100 nM ERB added for the indicated duration during the 6 h ADU-S100 treatment. Significance of eribulin determined by one-way ANOVA with Dunnett's posthoc test comparing all conditions to ADU-S100 alone. **p<0.01, ****p < 0.0001.

Figure S2

A

B

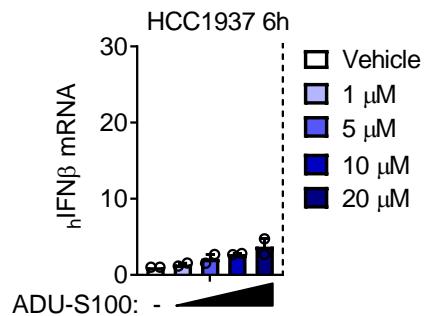

Figure S2. Concentration-dependence of STING agonists on IFN β expression in HCC1937 TNBC cells. Human *IFN β* mRNA expression in HCC1937 cells treated with indicated concentrations of (A) MSA-2 for 3 h or (B) ADU-S100 for 6 h.

Figure S3

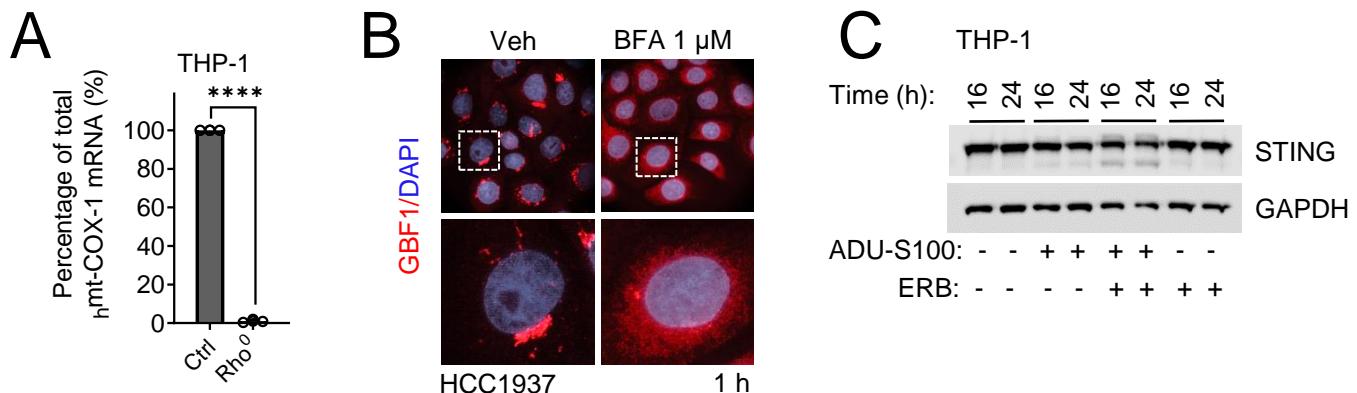

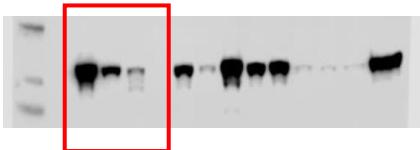

Figure S3. Eribulin's effect on the canonical STING signaling pathway. (A) Expression of the mitochondrially-encoded human cytochrome c oxidase subunit 1 (*COX-1*) mRNA in control and ethidium bromide (EtBr) cultured THP-1 cells (Rho^0). Significance is determined by paired t-test. ****p < 0.0001. (B) Immunofluorescence images of the cis-Golgi marker GBF1 and DAPI in HCC1937 cells treated with 1 μM BFA for 1 h. The white box insert represents an enlarged representative cell for detail, below. (C) Immunoblot of STING and GAPDH in THP-1 cells treated with 10 μM ADU-S100 with or without 100 nM ERB for 16 or 24 h.
