

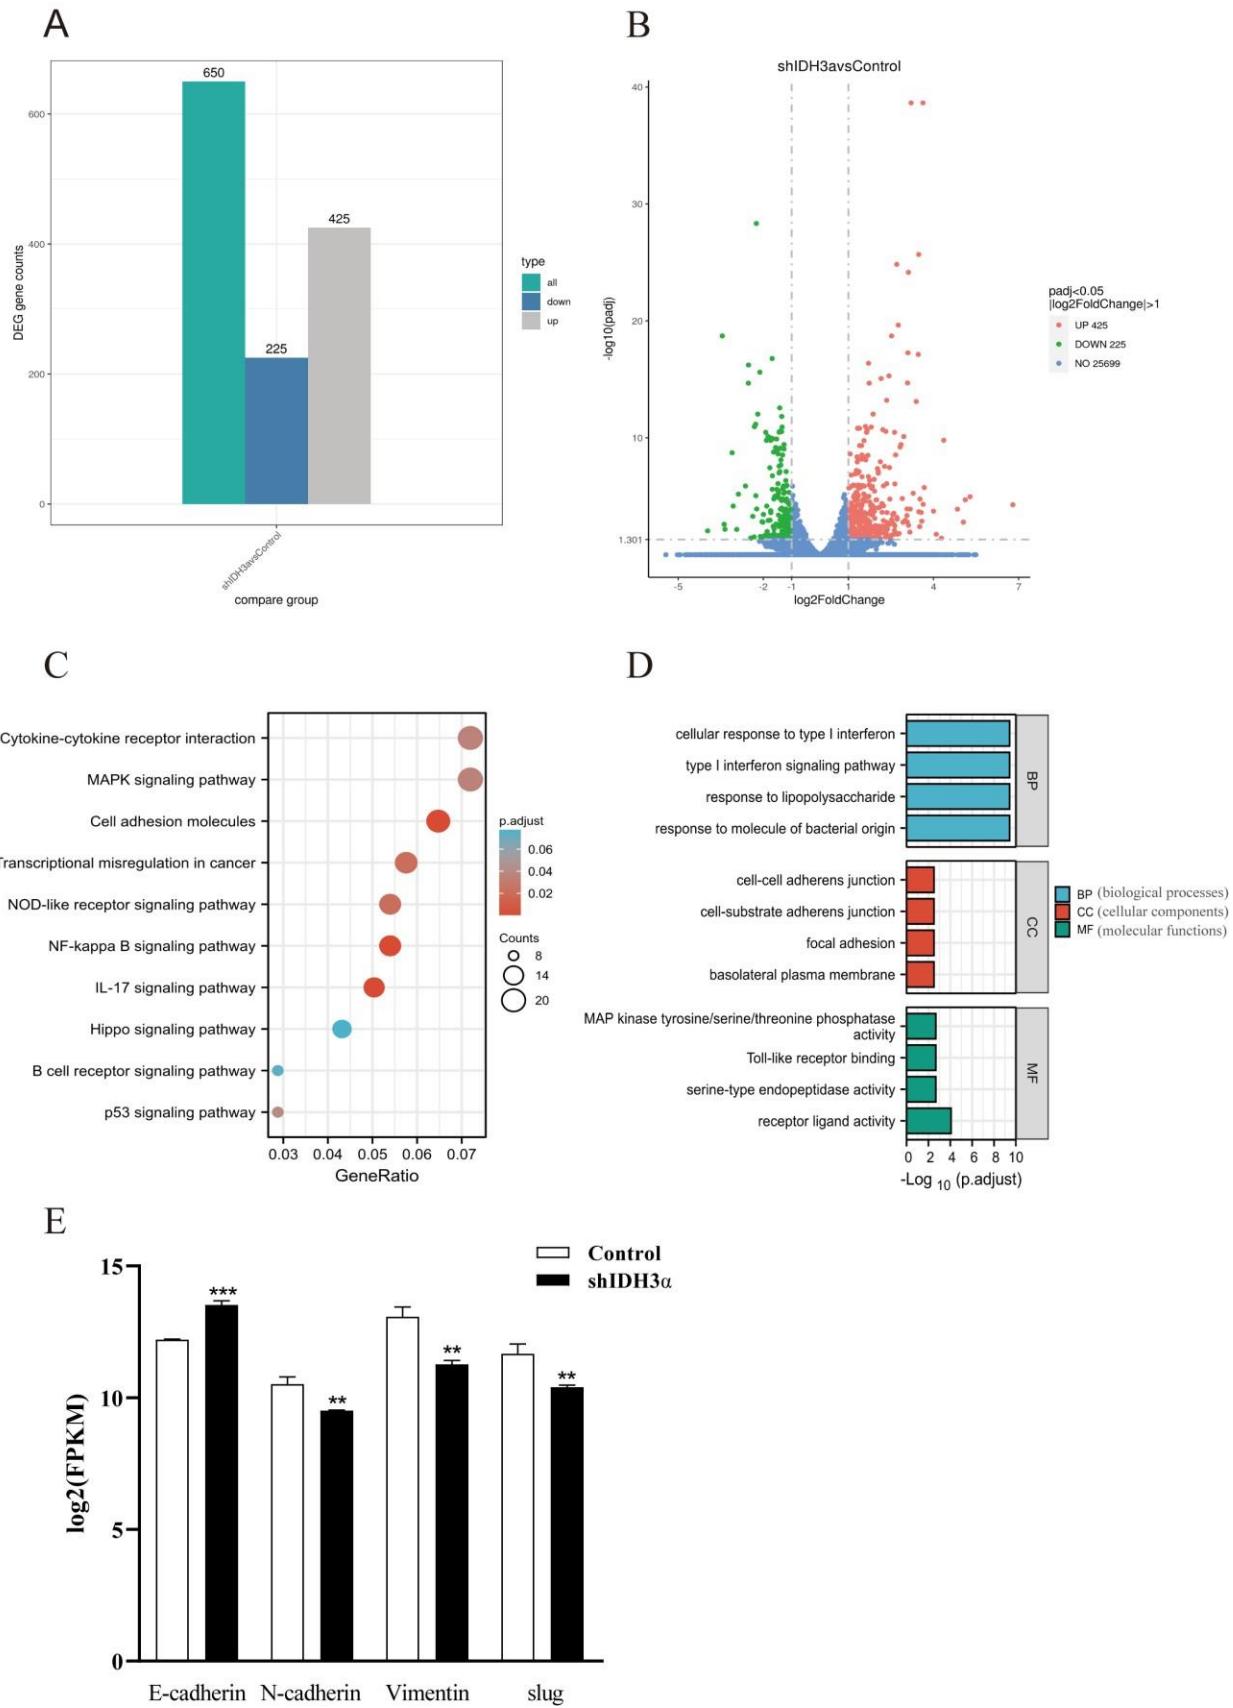

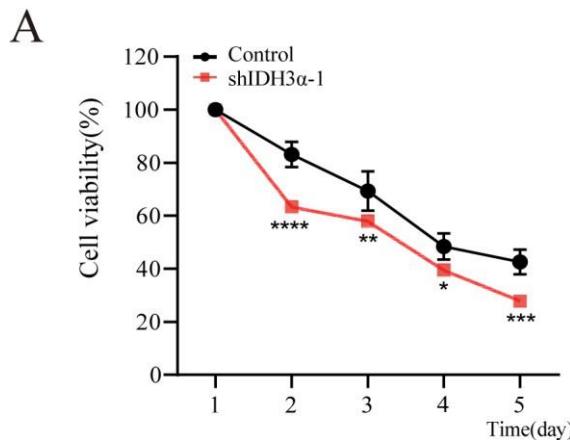

## Figure S1

**Figure S1. RNA-seq results.**

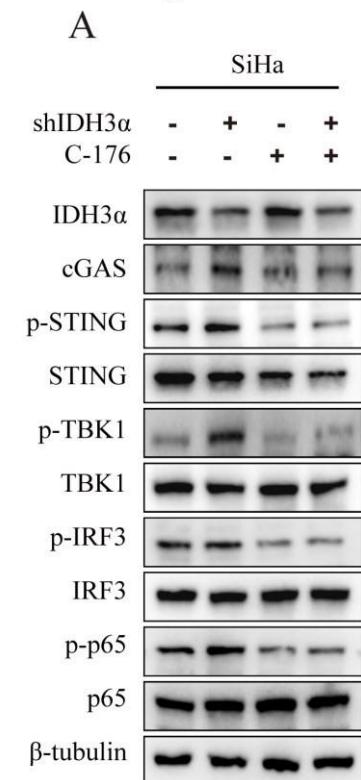

**A**, Statistical histogram of the number of differential genes (both up- and down-regulated) for each comparative combination ( $p \text{ adj} \leq 0.05$ ,  $|\log_{2}\text{FoldChange}| \geq 1.0$ ). **B**, Volcano plot of differential gene distribution in treatment and control groups. **C-D**, KEGG(C), and GO (D) enrichment analyses were conducted using the R “clusterProfiler” package. BP, biological processes; MF, molecular functions; CC, cellular components. **E**, The expression statistics of EMT markers in the RNA-seq data.

**Figure S2. SiHa cells' viability using CCK8 assay.**

SiHa cells' viability was time-dependently inhibited after the use of 5 $\mu\text{M}$  cisplatin treatment.

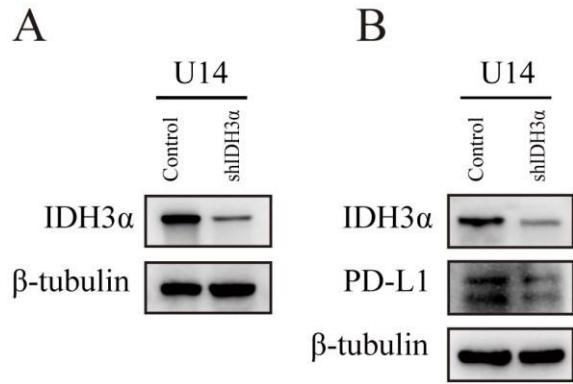

### Figure S3

**Figure S3. WB detection of cGAS-STING pathway-related protein expression.**

A. WB detection of cGAS-STING pathway-related protein expression after 20 $\mu\text{M}$  C-176 treatment for 24h in SiHa cells.

## Figure S4

**Figure S4. IDH3 $\alpha$  could regulate the expression level of PD-L1**

**A**, Validation of IDH3 $\alpha$  knockdown mouse cervical cancer stable cell line by WB. **B**, Western blot analysis of the effect of IDH3 $\alpha$ -deleted on PD-L1 expression in mouse UCC cells.
