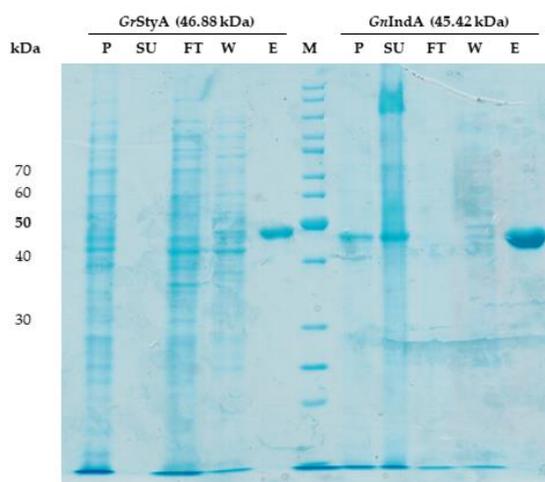

Figure S1. SDS gel of the protein production. Abbreviations: P: pellet, SU: supernatant, FT: flow through, W: wash, E: elution. Marker: Thermo Scientific unstained PageRuler (Lot #26614).

Table S1. Organic solvents used to optimize the enzymatic epoxidation of styrene. The solvents are ordered by their hydrophilicity in terms of their $\log P_{O/W}$ value.

Solvent (abbreviation)	$\log P_{O/W}$ ^a
Dimethyl sulfoxide (DMSO)	-1.35
Dimethyl formamide (DMF)	-1.01
Methanol (MeOH)	-0.77
Acetonitrile (AcN)	-0.34
Ethanol (EtOH)	-0.31
Acetone (-)	-0.24
2-Propanol (-)	+0.05
1-Propanol (-)	+0.25

Tetrahydrofuran (THF) +0.46

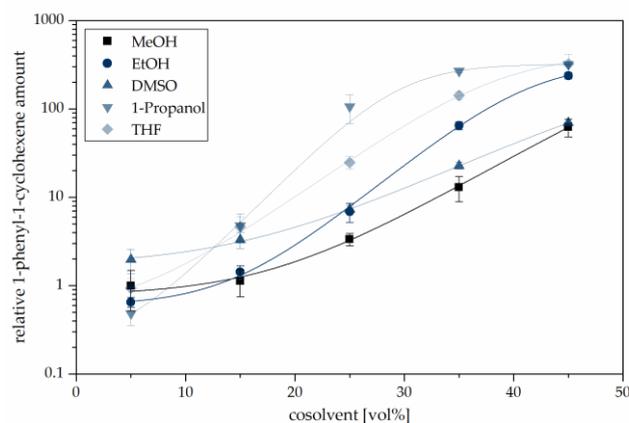

^a taken from Hansch *et al.* [28.]

Figure S2. Concentration of 1-phenyl-1-cyclohexene in aqueous solution in presence of different organic cosolvents normalized to the value for 5 vol% MeOH. Sigmoidal extrapolation of the data was performed using the following Boltzmann model: $y = A2 + (A1-A2)/(1 + \exp((x-x0)/dx))$. Variables: x: solvent concentration [vol%], y: relative amount of 1-phenyl-1-cyclohexene, A1, A2, x0, dx: constants.

Table S2. Enantiomeric excess of (S)-styrene oxide produced by *GnIndA* in presence of selected organic solvents.

Solvent	logP _{O/W} [28]	(S)-styrene oxide excess in presence of X vol% solvent		
		5	10	15
DMSO	-1.35	80.0 ± 2.1 %	-	81.1 ± 0.8 %
MeOH	-0.77	80.8 ± 1.5 %	-	80.1 ± 4.6 %
AcN	-0.34	-	80.3 ± 0.5 %	79.3 ± 1.4 %
EtOH	-0.31	82.8 ± 1.0 %	-	80.0 ± 2.1 %
Acetone	-0.24	-	80.4 ± 0.5 %	-

"-" = not measured.

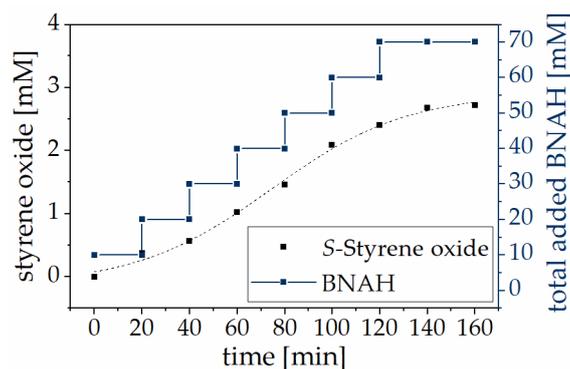

Figure S3. Continuously fed biotransformation of styrene to styrene oxide by *GrStyA*. The enzyme was supplied with 10 mM BNAH in solid form and 2 mM styrene every twenty minutes until minute 140. There is an increase in styrene oxide concentration until the BNAH supply was stopped indicating that the cosubstrate is limiting in the process. A maximal amount of 2.72 mM styrene oxide in solution (19.4% conversion) was reached. Sigmoidal extrapolation of the styrene oxide concentration was performed using the following Boltzmann model: $y = A2 + (A1 - A2) / (1 + \exp((x - x0) / dx))$. Variables: x : solvent concentration [vol%], y : relative amount of 1-phenyl-1-cyclohexane, $A1$, $A2$, $x0$, dx : constants.

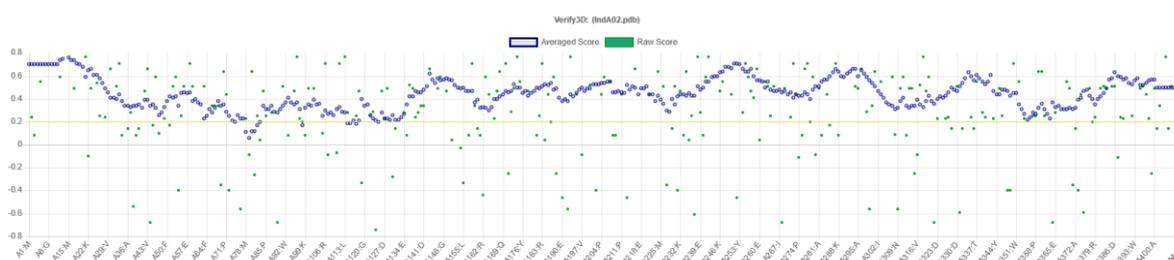

Figure S4. Results of the quality check of the structural *GrIndA* model by Verify 3D [36]. The structural model contains no amino acid clashes and sterically incorrect model secondary structure elements.

Figure S5. Multiple sequence alignment of *Gn*IndA, *Gr*StyA and *Pp*StyA with 22 related SMOs and IMO (see also [11], data not shown here) in comparison with the results from the FireProt and HotSpot Wizard webserver. The conservation of amino acids among those 25 enzymes is indicated in the fourth row. For the FireProt results the sequence of *Pp*StyA is displayed including the suggested mutations highlighted in green. If present in one of the sequences above, the respective amino acid is also highlighted in green there. The crucial amino acids assigned by the HotSpot Wizard are highlighted in yellow in the sequence of *Pp*StyA. Amino acids exchanges which were classified as “neutral or beneficial” are highlighted in yellow in the respective sequences except the amino acid matches a suggested mutation by the FireProt server. Amino acids conserved in the IMO sequences are underlined. Enzyme sequences used for alignment: SMOs: *R. opacus* 1CP (ANS32444), *Rhodococcus sp.* ST-5 (BAL04132), *Rhodococcus sp.* ST-10 (BAL04129), *N. ramosa* DSM11499 (WP_022977994), *S.*

fribergensis Kp5.2 (WP_039579272), *P. agarilytica* NO2 (GAC06215), *M. litorale* DSM 23545 (WP_027855270), *Pseudomonas* sp. LQ26 (ADE62390), *Pseudomonas* sp. Y2 (CAA04000), *P. fluorescens* ST (CAB06823), *P. taiwanensis* VLB120 (AAC23718), *P. putida* SN1 (ABB03727), *P. putida* CA-3 (ABX24519); IMOs: *Burkholderia* sp. IDO3 (APT36898), *R. opacus* 1CP (ACR43974), *N. farcinica* IFM 10152 (BAD56093), *P. aurescens* TC1 (ABM07034), *S. auratus* AGR0001 (EJJ03821), *V. paradoxus* EPS (ADU39062), *V. paradoxus* EPS (ADU39063), *D. acidovorans* SPH-1 (ABX34433).

Table S3. FireProt mutations in comparison with their abundance among IMOs and SMOs and corresponding amino acids in the sequence of *GrStyA* and *GnIndA*.

FireProt mutation in <i>P. putida</i> S12	$\Delta\Delta G$ [kJ mol ⁻¹]	Corresponding residue in		Abundance of residue in related enzymes	
		<i>G. rubripertincta</i> CWB2	<i>G. nectarophilus</i> DSM15620	SMOs (15 enzymes.)	IMOs (9 enzymes)
