

Figure S1: Variable pressure scanning electron microscopy images of LS_{TRIST}-CLO (A) and LS_{TRIST/Al}-CLO (B). Bar represents 20 μm .

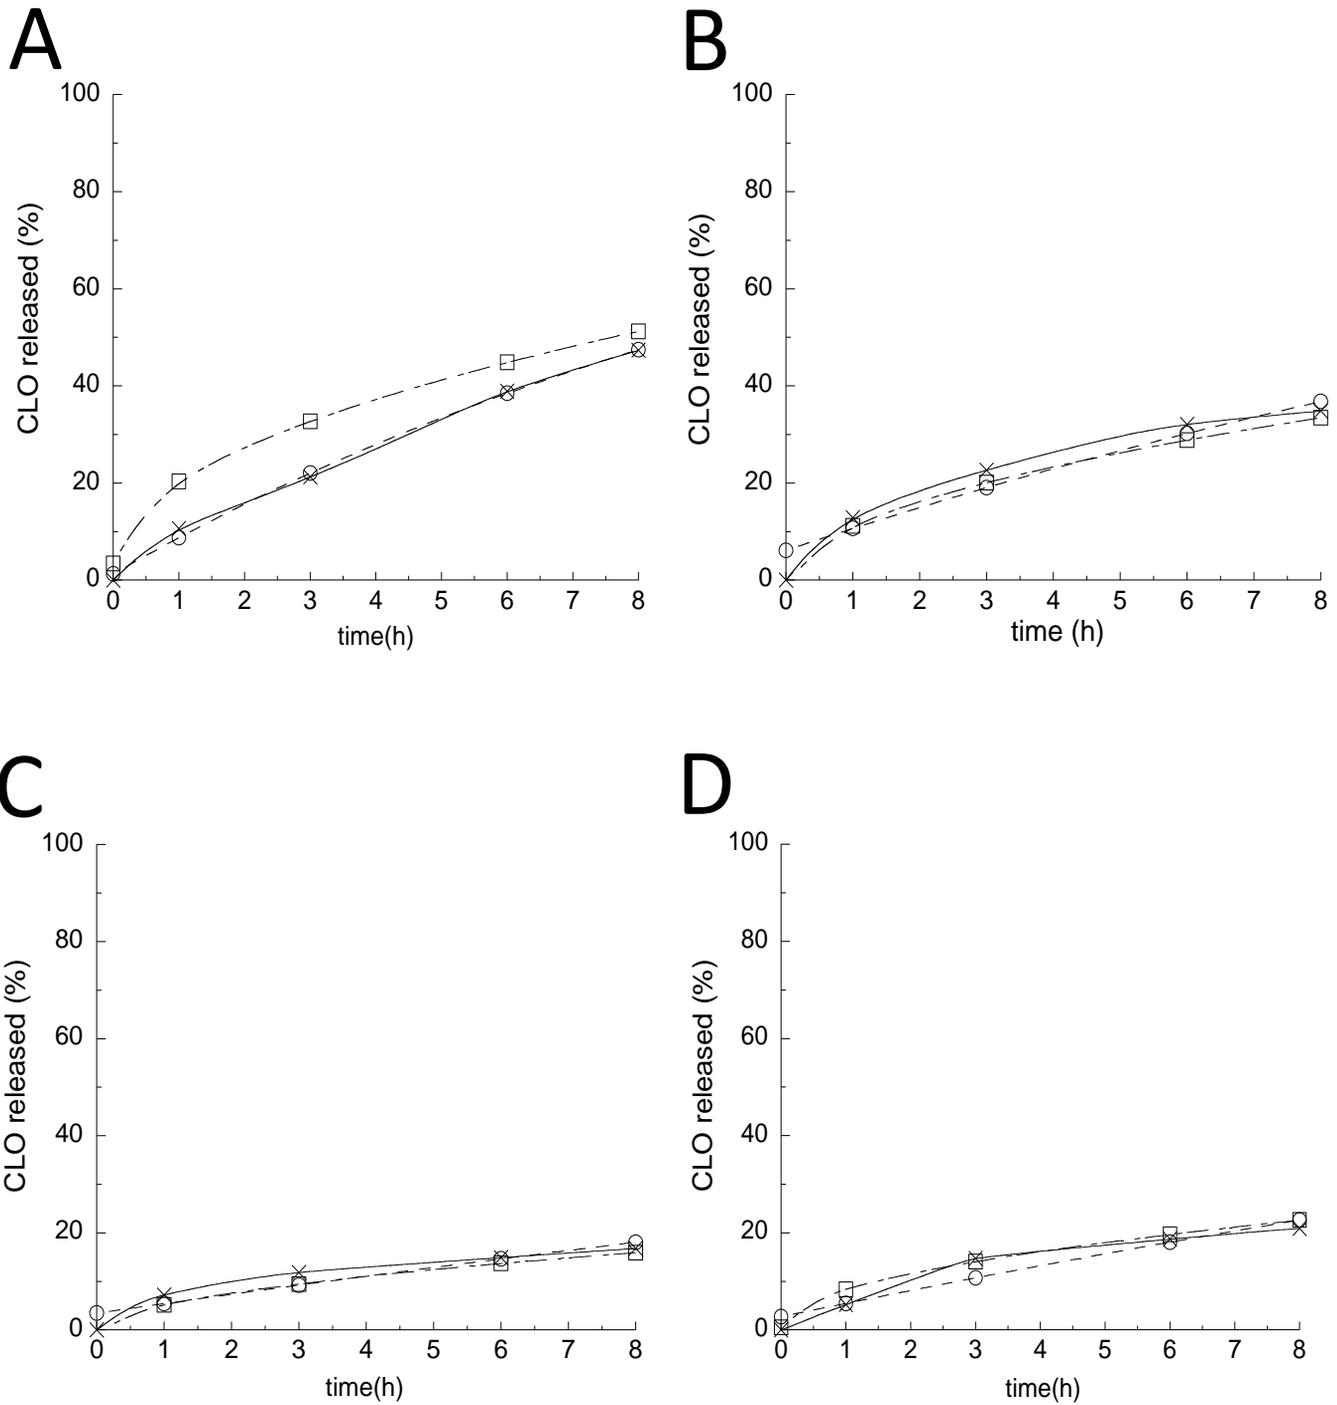

Figure S2: Comparison of the theoretical (x) and experimental CLO profiles from LS_{TRIST} -CLO (A), $LS_{TRIST/AL1}$ -CLO, (B), Gel LS_{TRIST} -CLO (C) and Gel $LS_{TRIST/AL1}$ -CLO (D), The theoretical curves were obtained using the coefficient calculated by linear regression of the linearized form of equation (4) (□) and equation (5) (○).
