

## Supplementary Materials

**Figure S1.**  $^1\text{H}$  NMR spectrum of AUPDS surfmer. The 3 hydrogens on the acryloyl group are present at 6.16 – 6.25 (m, 1H), 6.05 (dd, 1H), 5.55 (dd, 1H). The amide is on 8.07 (m, 1H) and both methylene groups adjacent to it are showed on 3.11 (m, 2H) and 1.64 (m, 2H). The alkyl chain is between 1.20–1.46 (m, 14H) and the methylene group next to the ester can be seen at 2.62 (m, 2H). The hydrogens on the phenyl ring on are shown at 7.50 (m, 2H) and 8.10–8.17 (m, 2H). The methyl groups on the sulfonium are at 3.27 (s, 6H) and the one on the sulfate is at 3.38 (s, 3H). The peak at 2.5 is the solvent trace signal for DMSO-d<sub>6</sub> and at 3.33 for water.

**Figure S2.** ATR-FTIR spectrum of AUPDS surfmer. 3308 (s, N-H stretch amide); 3018 (m, C-H stretch of the phenyl ring); 1587 and 1475 (m, C-H bend of the phenyl ring); 2918 and 2849 (s, C-H stretch of the alkyl chain); 1759 (s, C=O ester); 1653 (s, C=O acryloyl group); 1626 (s, C=C acryloyl group); and 1533 (s, N-H amide).

**Table S1.** Example of reagent amounts for the preparation of particles via mini-emulsion polymerization using the AUPDS surfmer.
