Stabilization of PIM Kinases in Hypoxia Is Mediated by the Deubiquitinase USP28

1% O ₂	-	-	+	+
Flag-FBW7	+	+	+	+
HA-PIM2	-	+	-	+

Supplementary Figure S1. PIM2 does not interact with FBW7. 293T cells were co-transfected with Flag-FBW7 and HA-PIM2 and cultured in normoxia or hypoxia for 6 h. HA-PIM2 was immunoprecipitated, and immunoprecipitated and input lysates were used for western blotting. Cells transfected with Flag-FBW7 alone were used as a negative control.
