Boxplot of relative quantification of selected transcripts for Real-Time validation, with indication of standard errors. Y axis: mean of ratio of nanograms of PX enriched genes on ng of reference gene; X axis: bars of pharynx (PX), the carcass (CARC) and the whole larvae (WL). HA in green: *Hysterothylacium aduncum*; AS in blue: *Anisakis simplex* sensu stricto; AP in orange: *Anisakis pegreffii*.
