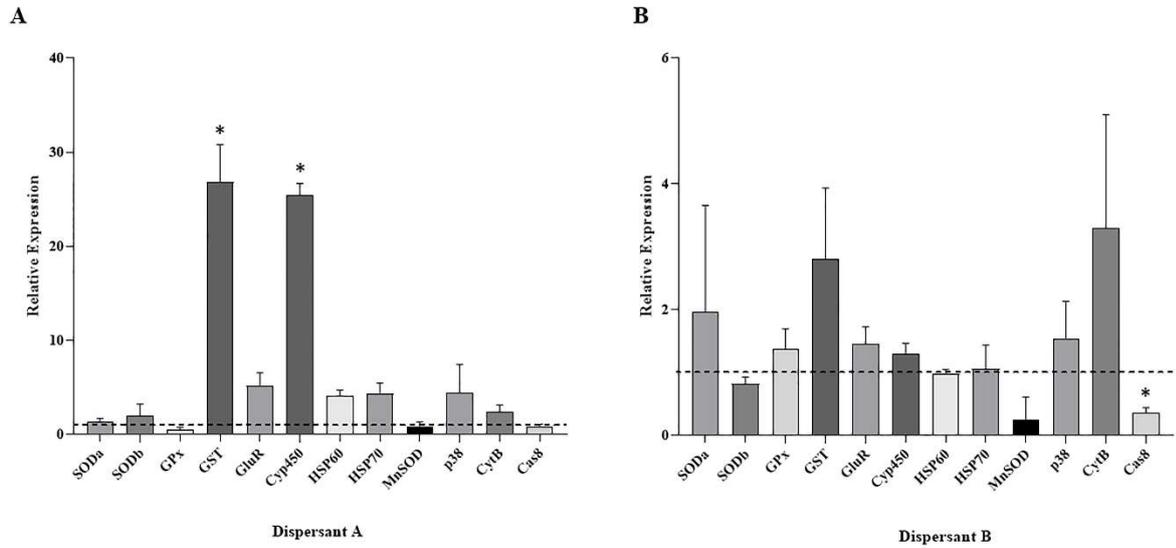

Figure S1. Expression of *soda*, *sodb*, *gpx*, *gst*, *GluR*, *Cyp450*, *hsp60*, *hsp70*, *MnSod*, *cytB*, *p38 MAPK* and *cas8* genes by comparative RT q-PCR with total RNA isolated from control and exposed embryos to dispersant A (A) and dispersant B (B) after 22 hpf. Results are expressed as fold increase compared to controls assumed as 1, using cytoskeletal actin as reference gene for normalization. Each bar represents the mean of three independent experiments \pm SEM. * indicates a significant difference (t-test, $p < 0.05$) respect to controls.
