$\hat{\alpha}_{gs}$ and $\hat{\alpha}_{mo}$: estimated whites-sky shortwave albedo for growing season and monthly periods, respectively.

“*”: cover types considered in this study.

Table S2. Mean (\pm standard deviation) for $\hat{\alpha}_{\text{gs}}$ and $\hat{\alpha}_{\text{mo}}$ 2001–2019 for the four cover types. Average values (\bar{X}) across the four cover types ($\bar{X}_{\text{cover type}}$) and for the 19-years growing season (\bar{X}_{gs}) and the 11-month (\bar{X}_{mo}) periods are also shown.

Time-period	Cover type

$\hat{\alpha}_{\text{gs}}$ and $\hat{\alpha}_{\text{mo}}$: estimated whites-sky shortwave albedo for growing season and monthly periods, respectively.

Table S3.1. Growing season albedo-induced global warming impact ($\text{GWI}_{\Delta\text{ags}}$, $\text{Mg C}_{\text{eq}} \text{ha}^{-1} \text{gs}^{-1}$) 2001–2019 for Ecoregion 56b. Cumulative $\text{GWI}_{\Delta\text{ags}}$ value for the entire ecoregion over the 19-year period is underlined. Major deviations (i.e., peaks (\uparrow) and decreases (\downarrow)) from the $\text{GWI}_{\Delta\text{ags}}$ mean are also shown. Positive and negative values of $\text{GWI}_{\Delta\text{ags}}$ indicate growing season warming and cooling effects, respectively, equivalent to Carbon (C_{eq}) emission and mitigation, respectively, 2001–2019.

Table S3.5. Growing season albedo-induced global warming impact ($\text{GWI}_{\Delta\text{ags}}$, $\text{Mg C}_{\text{eq}} \text{ha}^{-1} \text{gs}^{-1}$) 2001–2019 for Ecoregion 56h. Cumulative $\text{GWI}_{\Delta\text{ags}}$ value for the entire ecoregion over the 19-year period is underlined. Major deviations (i.e., peaks (\uparrow) and decreases (\downarrow)) from the $\text{GWI}_{\Delta\text{ags}}$ mean are also shown. Positive and negative values of $\text{GWI}_{\Delta\text{ags}}$ indicate growing season warming and cooling effects, respectively, equivalent to Carbon (C_{eq}) emission and mitigation, respectively, 2001–2019.

	Residuals	130	3.95	0.03			

GWI_{Δαgs} and GWI_{Δαmo}: albedo-induced global warming impact (GWI_{Δα}) at growing season and monthly periods, respectively.

Signif. codes: *** p-value < 0.001, ** p-value < 0.01, * p-value < 0.05, · p-value < 0.1, p-value > 0.1.

η²: generalized eta squares indicating the variance in the dependent variable (i.e., GWI_{Δα}) accounted for by the independent variables (i.e., ecoregion, cover type, and their interactions).

"^a"': η² values obtained from the Mauchly's test of sphericity by applying the Greenhouse-Geisser correction.

Table S6. Overall percent contribution and percent contribution higher than the average (>8%; i.e., 1/12th of the total, i.e., equal contribution across the 12-month period) of albedo-induced global warming impact (GWI_{Δα}) by season and month in the five Level IV ecoregions. Cooling effects showing the contributions higher than the average are underlined.

Table S8.5. Growing season albedo-induced radiative forcing ($RF_{\Delta\text{ags}}$, W m^{-2}) 2001–2019 for Ecoregion 56h. Cumulative $RF_{\Delta\text{ags}}$ value for the entire ecoregion over the 19-year period is underlined. Positive and negative values of $RF_{\Delta\text{ags}}$ indicate growing season warming and cooling effects, respectively.

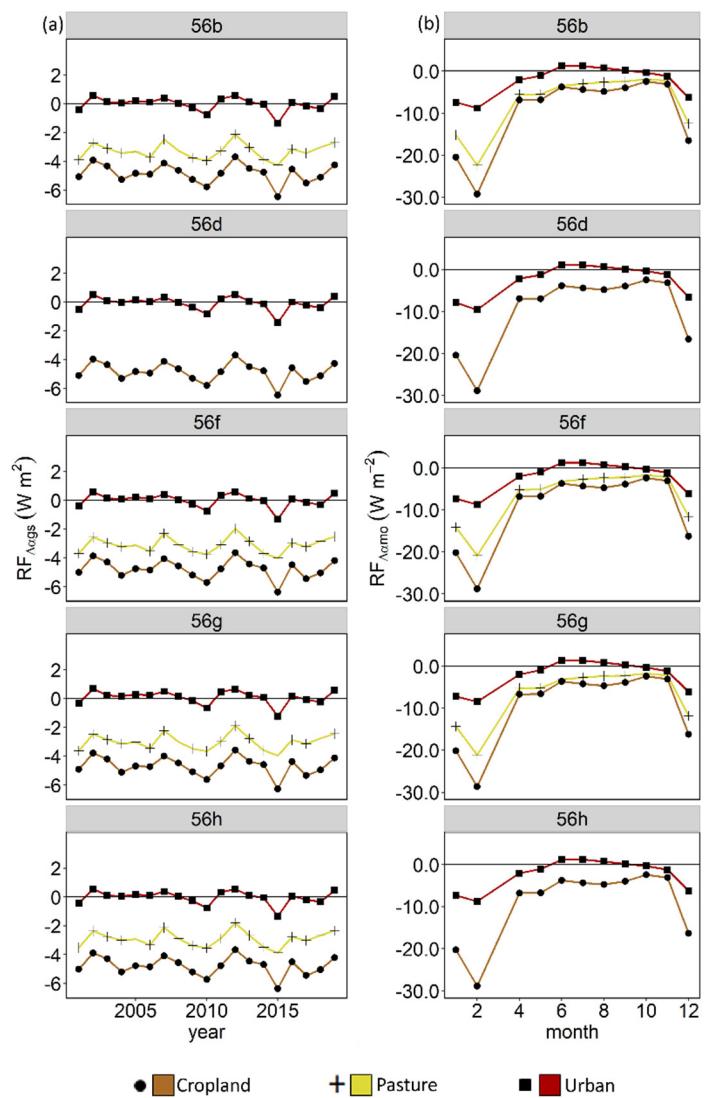

Figure S1. Albedo-induced radiative forcing ($RF_{\Delta\alpha}$) for the five Level IV ecoregions. Panels **a,b** represent the $RF_{\Delta\alpha}$ for the growing season ($RF_{\Delta\alpha_{\text{gs}}}$; 2001–2019) and monthly ($RF_{\Delta\alpha_{\text{amo}}}$; January–December, less March) periods, respectively. Positive and negative values of $RF_{\Delta\alpha_{\text{gs}}}$ and $RF_{\Delta\alpha_{\text{amo}}}$ indicate warming and cooling effects, respectively, during 19 growing seasons and 11 months over the 19-year period, respectively.
