## Characterization of Fibrous Wollastonite NYAD G in View of Its Use as Negative Standard for *In Vitro* Toxicity Tests

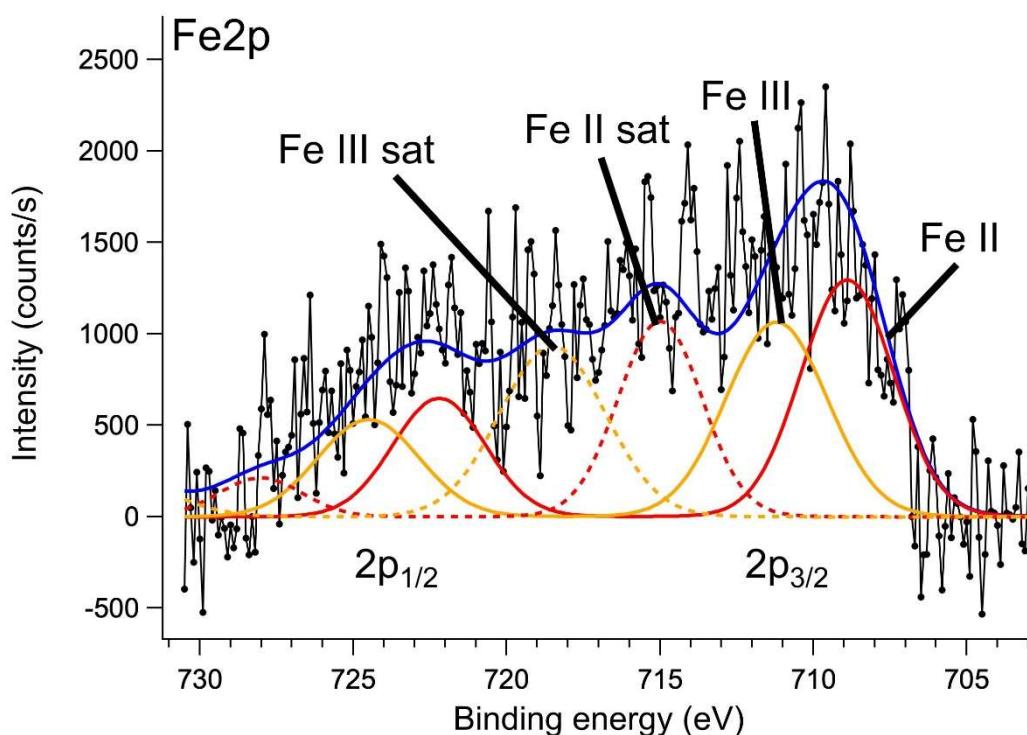

Dario Di Giuseppe, Valentina Scognamiglio, Daniele Malferrari, Luca Nodari, Luca Pasquali, Magdalena Lassinanti Gualtieri, Sonia Scarfi, Serena Mirata, Umberto Tessari, Miriam Hanuskova and Alessandro F. Gualtieri

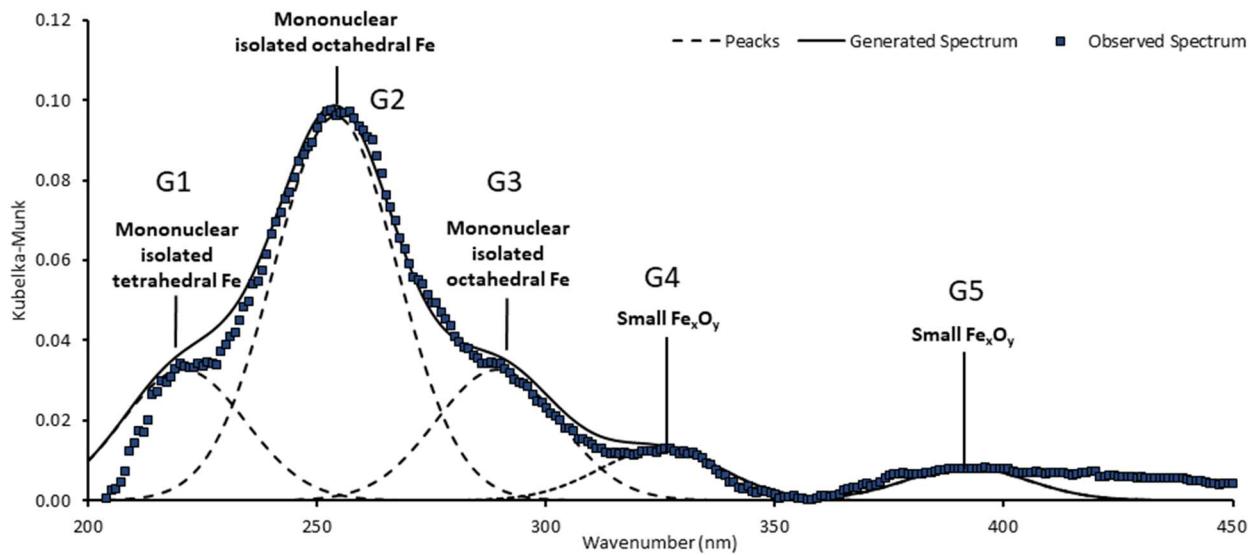

**Figure S1.** (a) Representative SEM image of a calcite crystal (highlighted by the red star) found in the sample. Image obtained by the backscattered electron detector. (b) EDX spectrum of calcite crystal shown in (a).

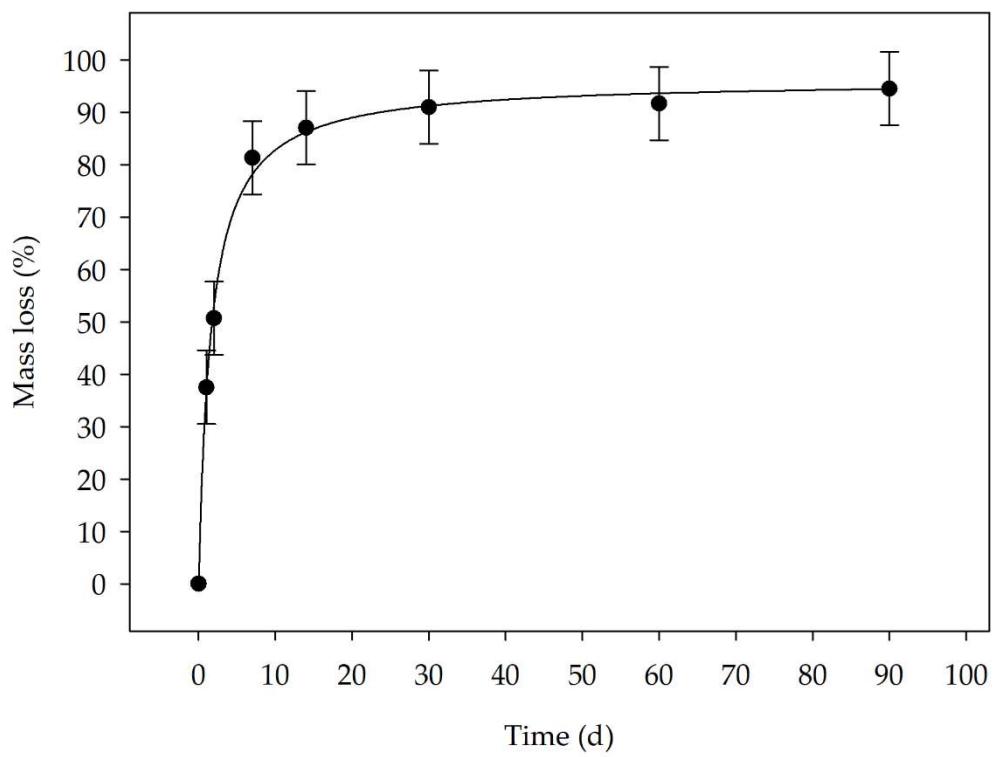

**Figure S2.** Room temperature Mössbauer spectrum of wollastonite NYAD G. Red line stands for Db1, blue line for Db2 and green line for Db3.

**Figure S3.** The Fe2p region of XPS spectra of wollastonite NYAD G.

**Figure S4.** UV-Vis spectrum of wollastonite NYAD G

**Figure S5.** Dissolution curve of wollastonite NYAD G

**Table S1.** Results of EMPA analysis of wollastonite NYAD G
