Supplementary figure 2. Cumulative incidence of biochemical recurrence after external beam radiation therapy
 in A) all men, B) men stratified for quartiles uPAR I-III, C) men stratified for quartiles uPAR I-III + II-III and D) men stratified for quartiles uPAR I.

Supplementary figure 3. Spline curves hazards of biochemical recurrence after external beam radiation therapy for different plasma uPAR levels (fmol/ml) at baseline. A) plasma uPAR I-III, B) plasma uPAR I-III + II-III and C) plasma uPAR I.

Supplementary text S1. Detailed number of excluded men based in exclusion criteria.

Exclusion criteria:

Missing recurrence status, uPAR must be measured before treatment, uPAR has to have been measured, all variables that are adjusted for in multivariate analysis must be present.

Breakdown of exclusion per curative treatment

For Radical Prostatectomy

Initially 613 patients

- 1 patient for missing recurrence status
- 8 patient for having the uPAR measured after the treatment
- 58 patient for missing uPAR measurements
- 14 patient for missing pretreatment PSA or margin status

For external beam radio therapy

Initially 203 patients

- 5 patient for missing recurrence status
- 9 patient for having uPAR measured after the treatment
- 25 patient for missing uPAR measurements
- 5 patient for missing pretreatment PSA
