This is an English translation from the original questionnaire in Japanese. The purpose is to make it accessible to the readers, and it is not intended to be applied in an actual survey.

Attitude Survey of Social Participation and the Body
—Developing a Method of Scoring "Difficulties in Participation"—

(Name)

(Affiliation)

(E-mail address)

The survey above is now being carried out on the NTTCom research monitors. Please understand the objective of the survey and answer the questions.

Our life is based on participation in society. However, it is said that social participation becomes difficult when bodily conditions are changed by injuries and illnesses. If so, how difficult would social participation become with various bodily conditions? This survey tries to "score" the difficulties in participation. Its result will be made public in an article or conference presentation.

The survey is anonymous. All data are statistically processed without specifying individuals. Complete privacy is ensured, and your answer will only be used for the purpose of this survey.

Whether you answer or not is at your will. There will be no disadvantage when you choose not to answer. People who answer the survey will get fixed points from NTTCom Research.

Please send an e-mail if you have any question about the survey.

Your cooperation would be appreciated.

Q 1   Below is a list of physical and mental conditions. Some might negatively affect one's social life such as work, school life, marriage, housework, and childcare. In your view, to what extent does each condition impact one's social life? To make sure, please choose "Not adverse at all" (1) in the first row.
