**Supplementary Table S1.** Risk of bias assessments of 18 eligible papers.

First author	1. Sample frame appropriate to address the target population?	2. Were study participants sampled in an appropriate way?	3. Was the sample size adequate?	4. Were the study subjects and the setting described in detail?	5. Was the data analysis conducted with sufficient coverage of the identified sample?	6. Were methods used for the identification of the condition?	7. Was the condition measured in a standard, reliable way for all participants?	8. Was there appropriate statistical analysis?	9. Was the response rate adequate, and if not, was the low response rate managed appropriately?	Overall quality rating
Boscolo-Rizzo, P.	No	Yes	Yes	No	Unclear	Yes	No	Yes	Yes	High
