## Table of contents

Supplementary Figure S1. Molecular structures of riboflavin and the vitamin related cofactors FMN and FAD.  
Supplementary Figure S2. SDS PAGE (15%) after expression and purification of ZIKV NS2B/NS3<sup>pro</sup>, YFV NS2B/NS3<sup>pro</sup> and CHIKV nsP2<sup>pro</sup>.

Supplementary Figure S3. Normalized activity and inhibition effect of riboflavin over ZIKV NS2B/NS3<sup>pro</sup>, YFV NS2B/NS3<sup>pro</sup> and CHIKV nsP2<sup>pro</sup>.

Supplementary Figure S4. Thermal denaturation of ZIKV NS2B/NS3<sup>pro</sup>, YFV NS2B/NS3<sup>pro</sup> and CHIKV nsP2<sup>pro</sup>-riboflavin complexes using fluorescence spectroscopy.

Supplementary Figure S5. Clustering analysis of ZIKV NS2B/NS3<sup>pro</sup>-riboflavin complex after MD simulation.

Supplementary Figure S6. Clustering analysis of YFV NS2B/NS3<sup>pro</sup>-riboflavin complex after MD simulation.

Supplementary Figure S7. Clustering analysis of CHIKV nsP2<sup>pro</sup>-riboflavin complex after MD simulation.

Supplementary Figure S8. Time dependent modifications of the ZIKV NS2B/NS3<sup>pro</sup>-riboflavin complex.

Supplementary Figure S9. Time dependent modifications of the YFV NS2B/NS3<sup>pro</sup>-riboflavin complex.

Supplementary Figure S10. Time dependent modifications of the CHIKV nsP2<sup>pro</sup>-riboflavin complex.

Supplementary Figure S11. Decomposition of the binding energy of ZIKV NS2B/NS3<sup>pro</sup>-riboflavin complex of three independent replicas.

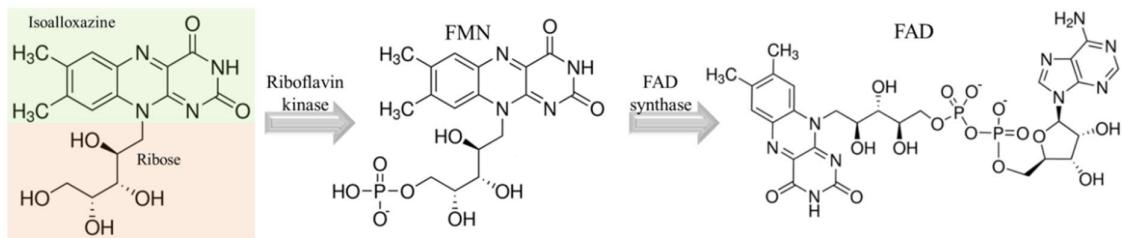

Supplementary Figure S12. Decomposition of the binding energy of YFV NS2B/NS3<sup>pro</sup>-riboflavin complex of three independent replicas.

Supplementary Figure S13. Decomposition of the binding energy of CHIKV nsP2<sup>pro</sup>-riboflavin complex of three independent replicas

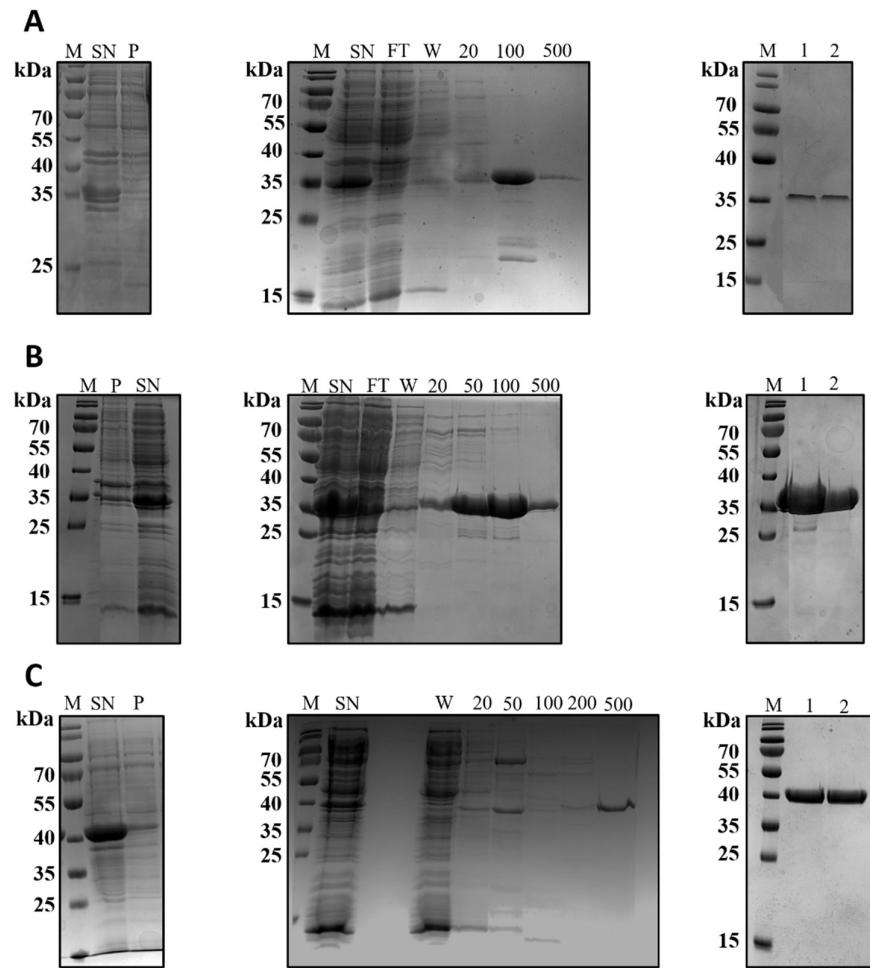

Supplementary Figure S14. Cytotoxicity assay of riboflavin against vero cells.

Supplementary Table S1. Virus protease amino acid residues forming hydrogen bonds and hydrophobic interaction with riboflavin.

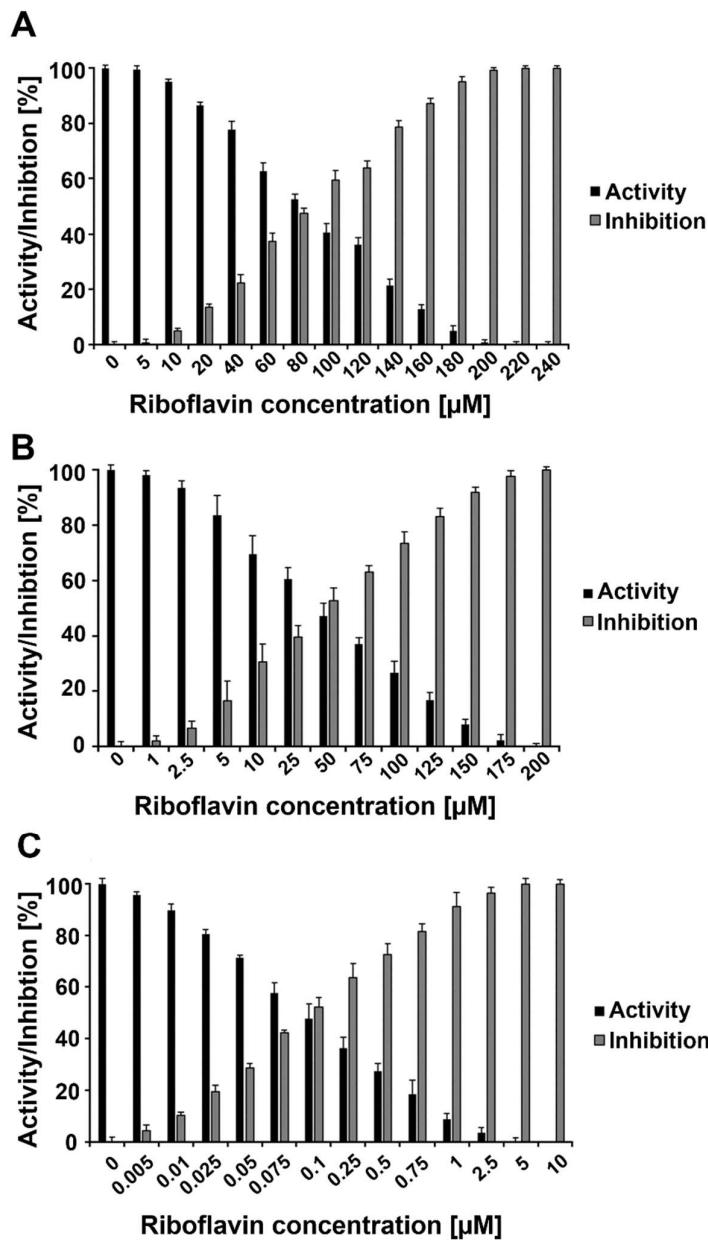

Supplementary Table S2. Contributing amino acids in the Substrate-binding sites of ZIKV, YFV NS2B/NS3<sup>pro</sup> and CHIKV nsP2<sup>pro</sup>.

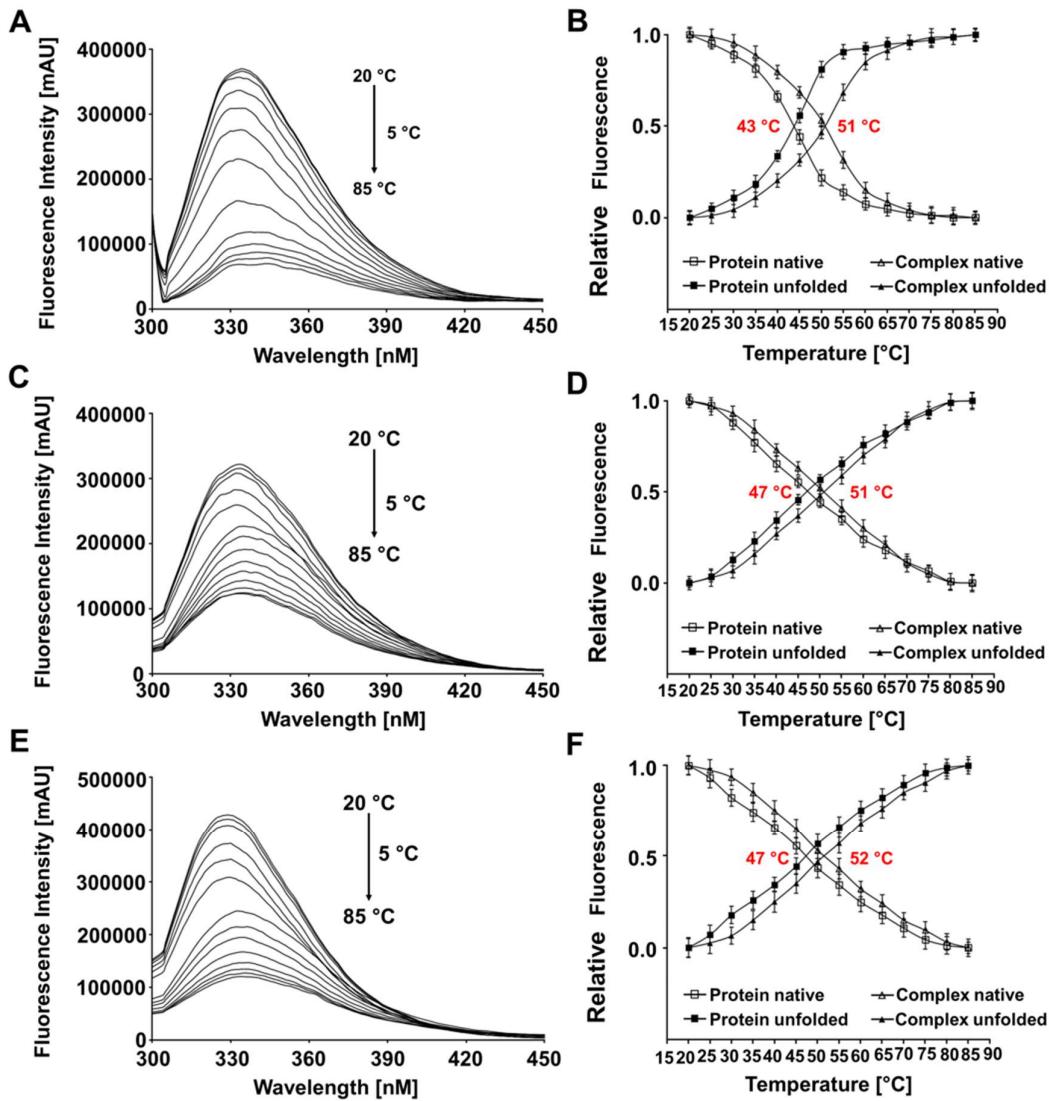

**Figure S1. Molecular structures of riboflavin and the vitamin related cofactors FMN and FAD.**

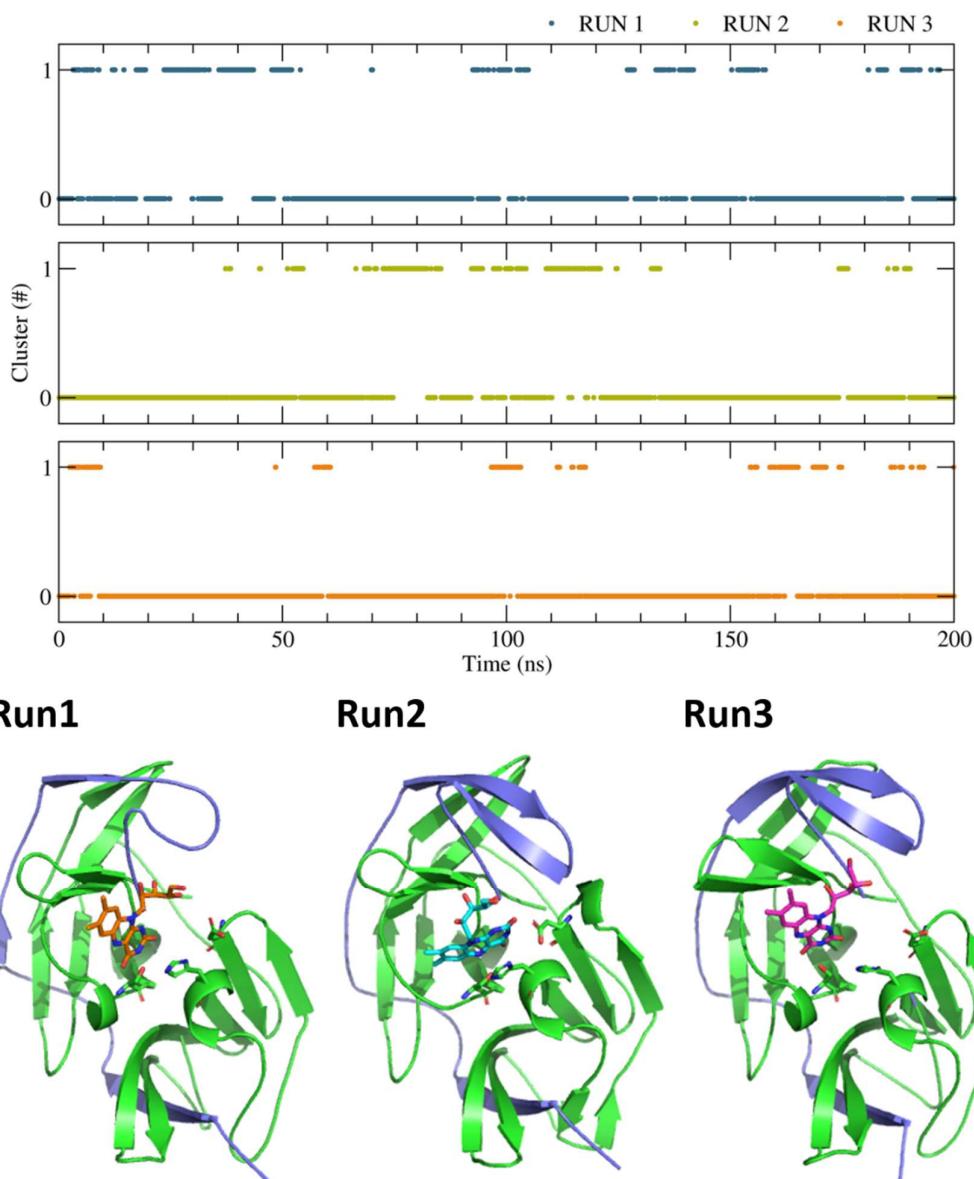

**Figure S2. SDS PAGE (15%) after expression and purification of ZIKV NS2B/NS3<sup>pro</sup>, YFV NS2B/NS3<sup>pro</sup> and CHIKV nsP2<sup>pro</sup>.** M: Molecular mass marker, SN: supernatant, P: cell pellet, FT: flow through, W: washing step without imidazole, Elution: elution steps with imidazole concentration in mM, 1: protease sample after affinity chromatography and 2: protease sample after size exclusion chromatography. The SDS PAGE 15% demonstrate the purity of the proteases after size exclusion chromatography. **(A)** ZIKV NS2B/NS3<sup>pro</sup>, **(B)** YFV NS2B/NS3<sup>pro</sup> and **(C)** CHIKV nsP2<sup>pro</sup>.

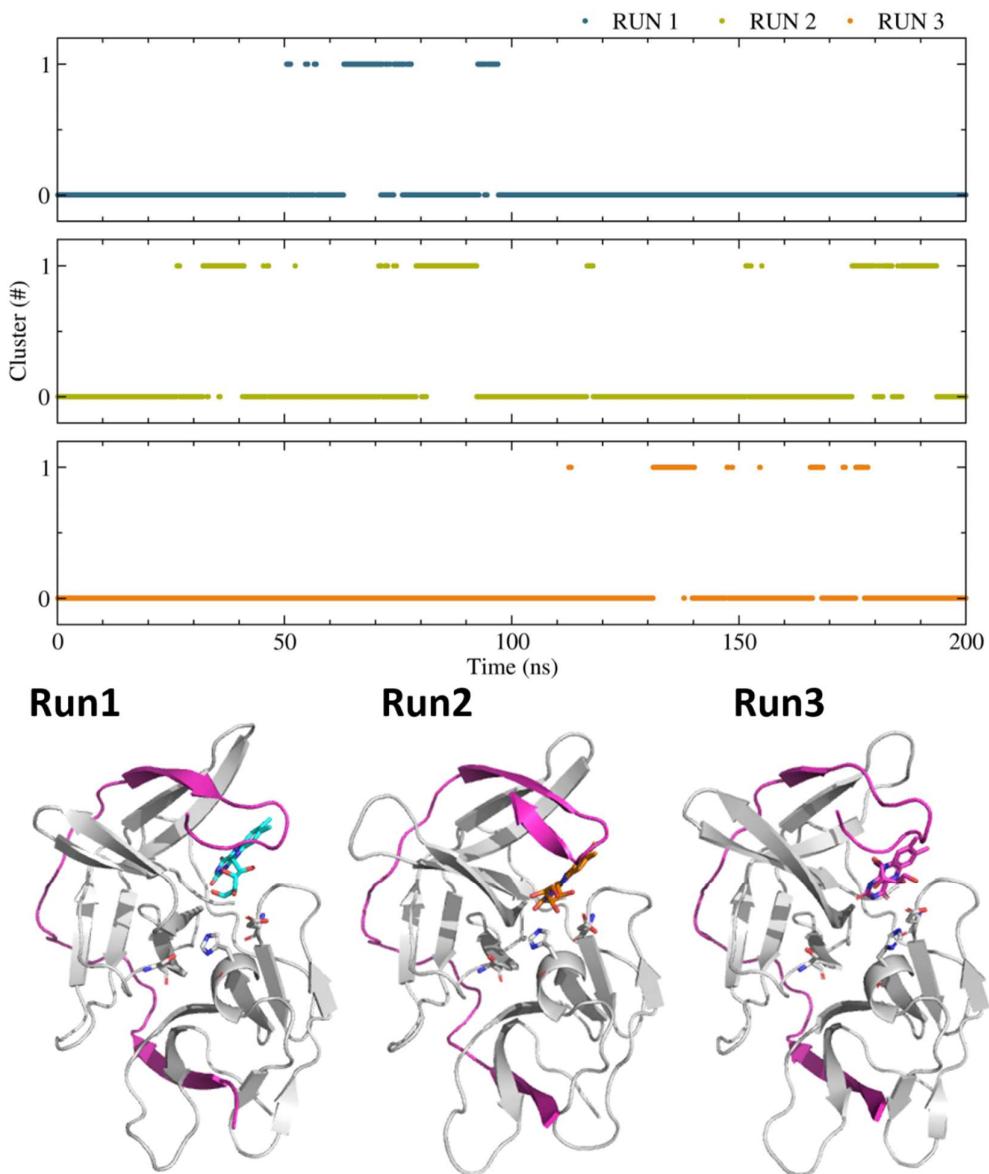

**Figure S3.** Normalized activity and inhibition effect of riboflavin over ZIKV NS2B/NS3<sup>pro</sup>, YFV NS2B/NS3<sup>pro</sup> and CHIKV nsP2<sup>pro</sup>. Data shown are the mean  $\pm$  SD from 3 independent measurements ( $n=3$ ). (A) ZIKV NS2B/NS3<sup>pro</sup> under riboflavin influence. (B) YFV NS2B/NS3<sup>pro</sup> under riboflavin influence. (C) CHIKV nsP2<sup>pro</sup> under riboflavin influence.

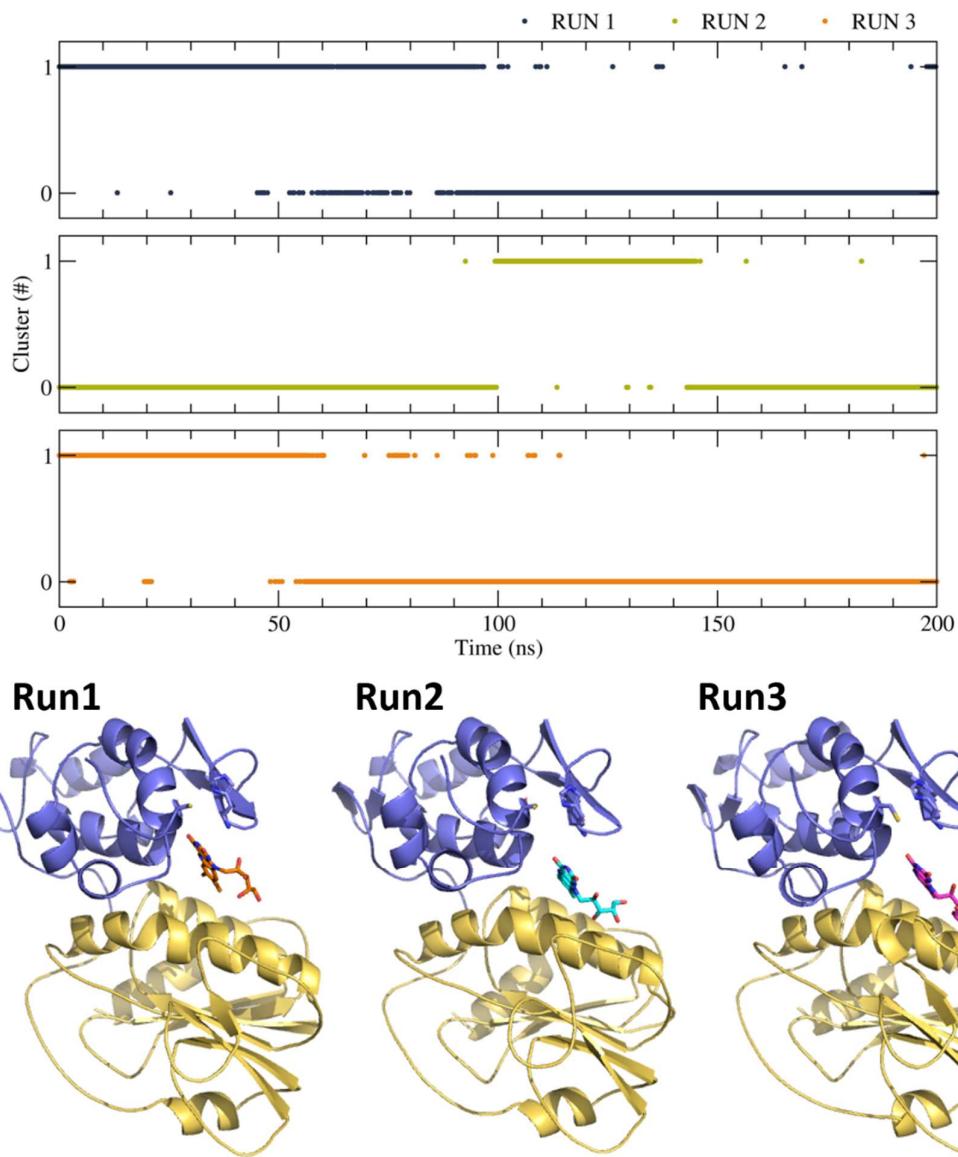

**Figure S4.** Thermal denaturation of ZIKV NS2B/NS3<sup>pro</sup>, YFV NS2B/NS3<sup>pro</sup> and CHIKV nsP2<sup>pro</sup>-riboflavin complexes using fluorescence spectroscopy. Data shown are the means  $\pm$  SD from three independent measurements ( $n=3$ ). **(A)** Fluorescence spectra during thermal denaturation of ZIKV NS2B/NS3<sup>pro</sup>-riboflavin complex. **(B)** Plot of the native protein fraction ( $f_N$ ) and the unfolding protein fraction ( $f_U$ ), during thermal denaturation from 20 to 85 °C. The melting temperature ( $T_m$ ) of 43 °C was determined for ZIKV NS2B/NS3<sup>pro</sup> and for the ZIKV NS2B/NS3<sup>pro</sup>-riboflavin complex the  $T_m$  increased to 51 °C. **(C)** Fluorescence spectra during thermal denaturation of YFV NS2B/NS3<sup>pro</sup>-riboflavin complex. **(D)** Plot of the native protein fraction ( $f_N$ ) and the unfolding protein fraction ( $f_U$ ), during thermal denaturation from 20 to 85 °C.  $T_m$  of 47 °C was determined for YFV NS2B/NS3<sup>pro</sup> and for the YFV NS2B/NS3<sup>pro</sup>-riboflavin complex the  $T_m$  increased to 51 °C. **(E)** Fluorescence spectra during thermal denaturation of CHIKV nsP2<sup>pro</sup>-riboflavin complex. **(F)** Plot of the native protein fraction ( $f_N$ ) and the unfolding protein fraction ( $f_U$ ), during thermal denaturation from 20 to 85 °C.  $T_m$  of 47 °C was determined for CHIKV nsP2<sup>pro</sup> and for the CHIKV nsP2<sup>pro</sup>-riboflavin complex the  $T_m$  increased to 52 °C.

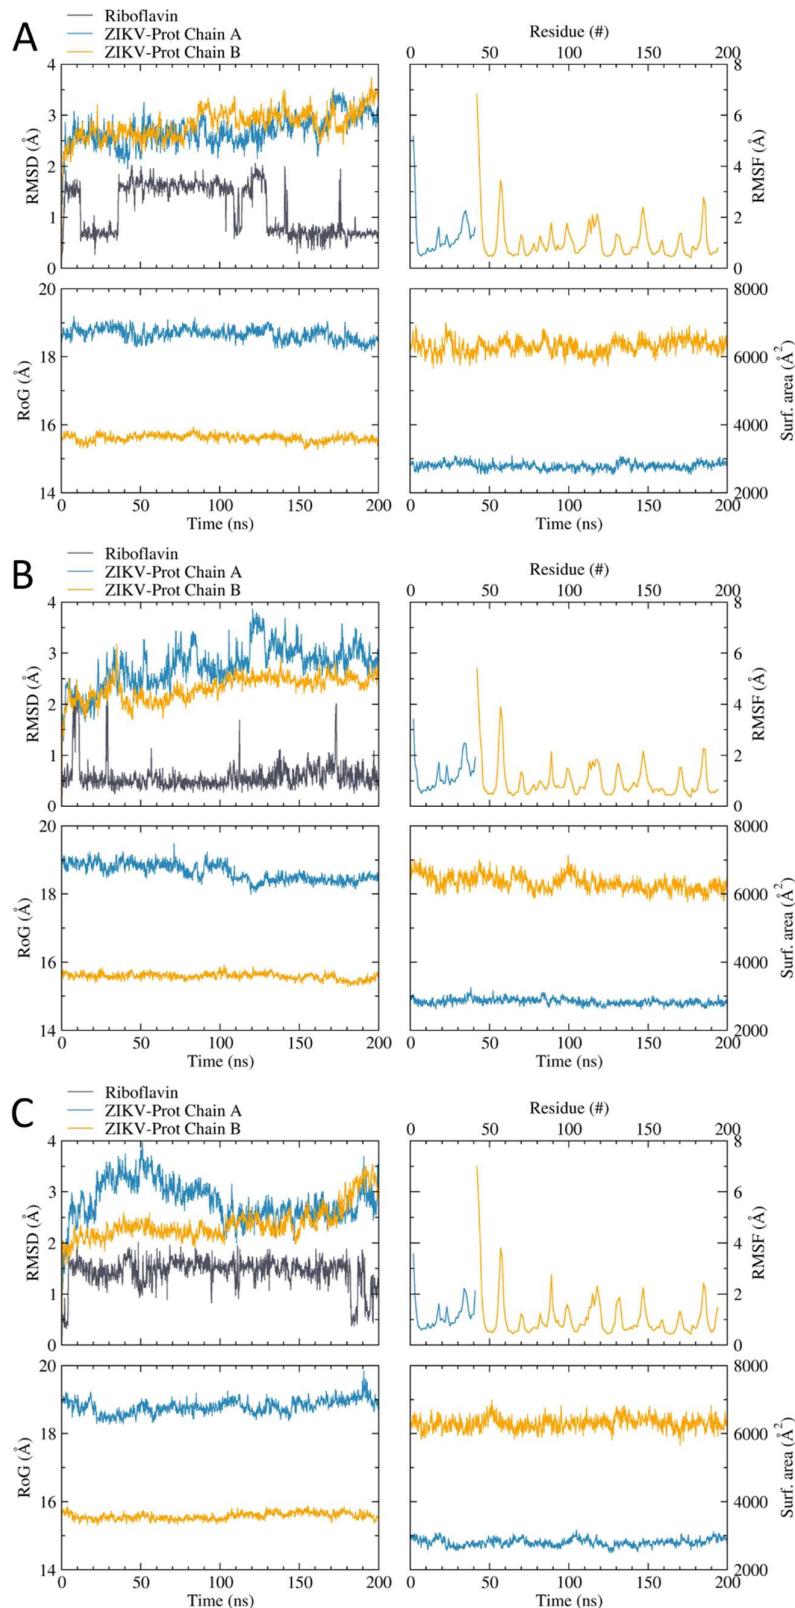

**Figure S5. Clustering analysis of ZIKV NS2B/NS3<sup>pro</sup>-riboflavin complex after MD simulation.** Complex structure pointed to a chosen cluster. 3D representation of ZIKV NS2B/NS3<sup>pro</sup>-riboflavin complex (NS2B/NS3<sup>pro</sup> in ribbon presentation, NS2B in blue and NS3 in green, active site triad and riboflavin in sticks).

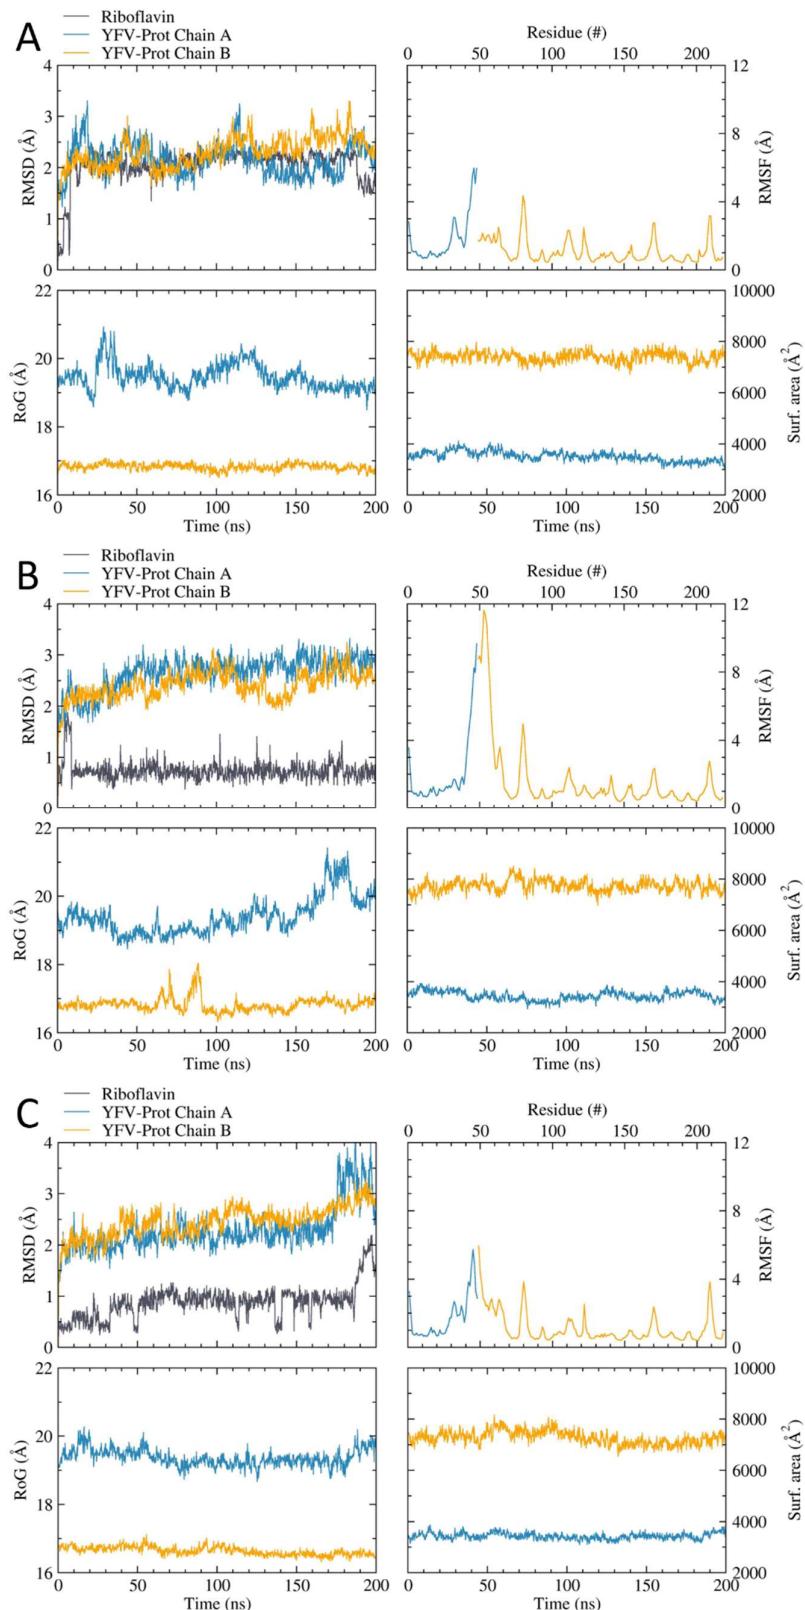

**Figure S6. Clustering analysis of YFV NS2B/NS3<sup>pro</sup>-riboflavin complex after MD simulation.** Complex structure pointed to a chosen cluster. 3D representation of YFV NS2B/NS3<sup>pro</sup>-riboflavin complex (NS2B/NS3<sup>pro</sup> in ribbon presentation, NS2B in magenta and NS3 in grey, active site triad and riboflavin in sticks).

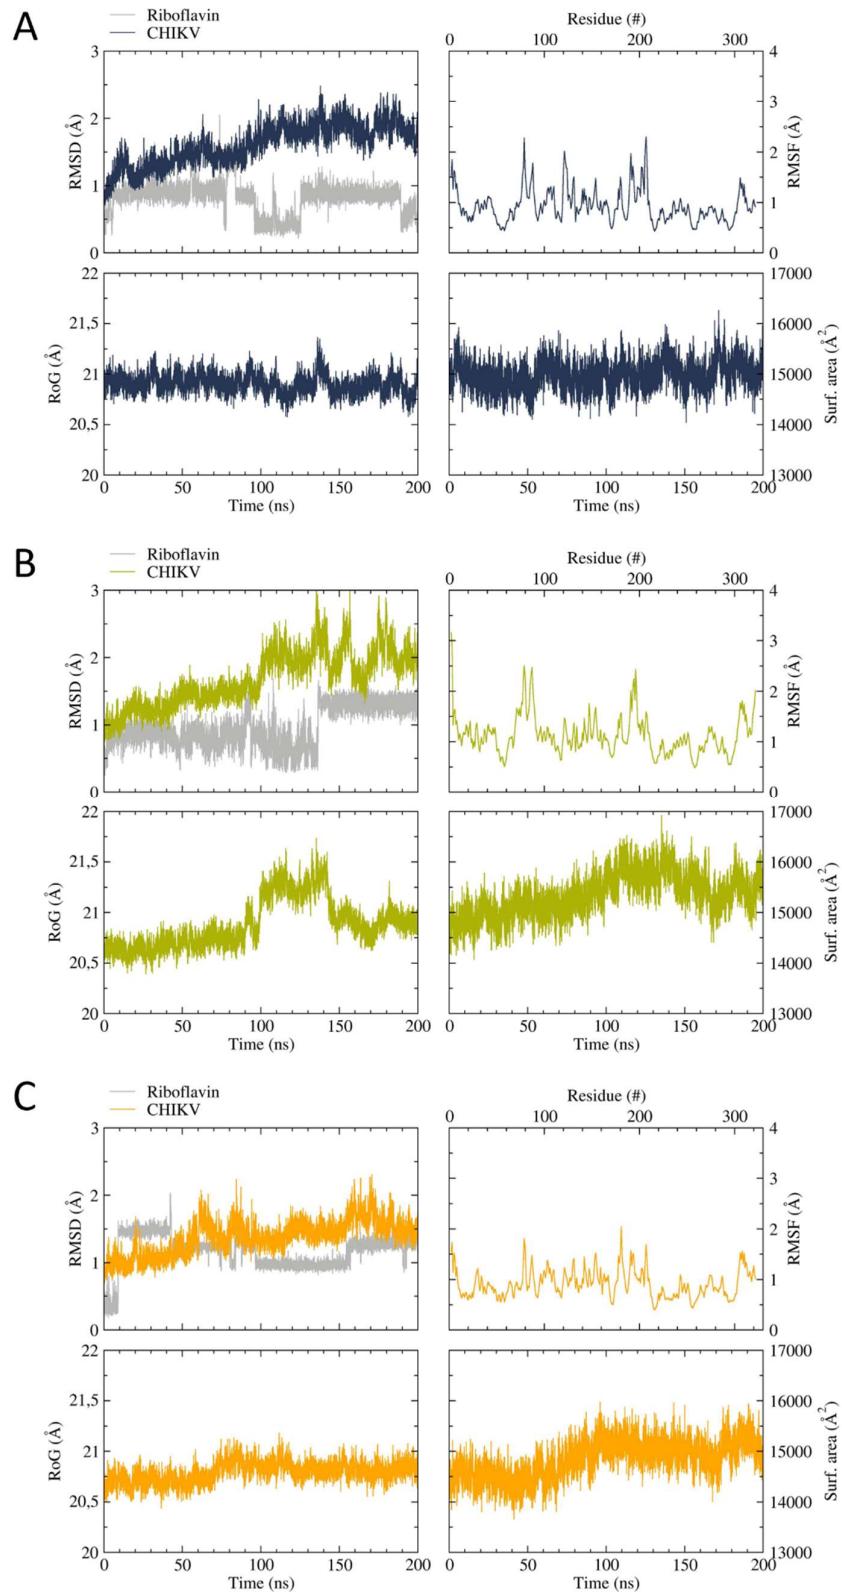

**Figure S7. Clustering analysis of CHIKV nsP2<sup>pro</sup>-riboflavin complex after MD simulation.** Complex structure pointed to a chosen cluster. 3D representation of CHIKV nsP2<sup>pro</sup>-riboflavin complex (nsP2 in ribbon presentation, cysteine protease domain in blue and methyl transferase domain in light yellow, active site dyad and riboflavin in sticks).

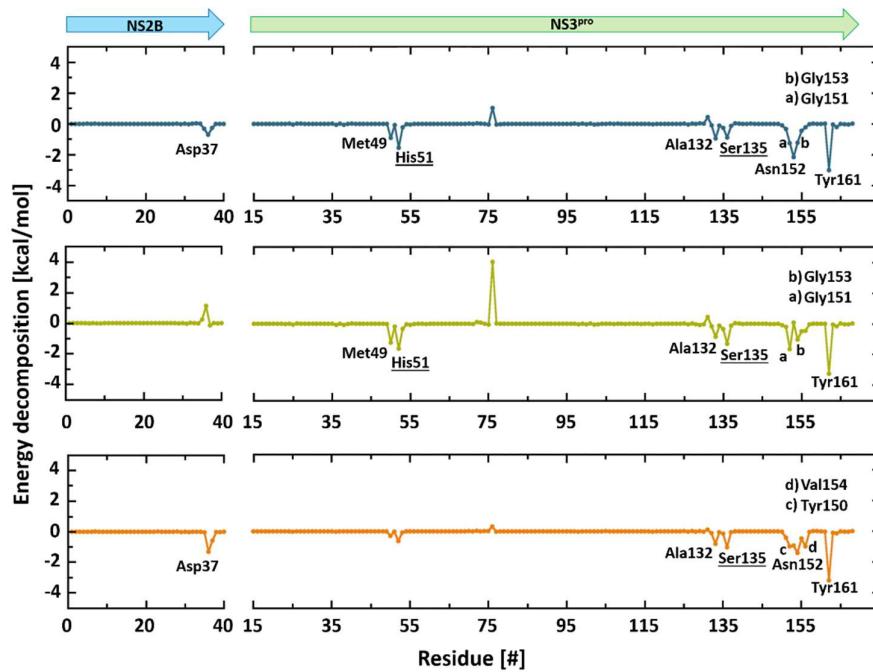

**Figure S8. Time dependent modifications of the ZIKV NS2B/NS3<sup>pro</sup>-riboflavin complex.** NS2B (blue), NS3<sup>pro</sup> (orange) and riboflavin (dark grey). RMSD, RMSF and surface area as function of time. RMSF for each amino acid. **(A)** replicate one, **(B)** replicate two and **(C)** replicate three.

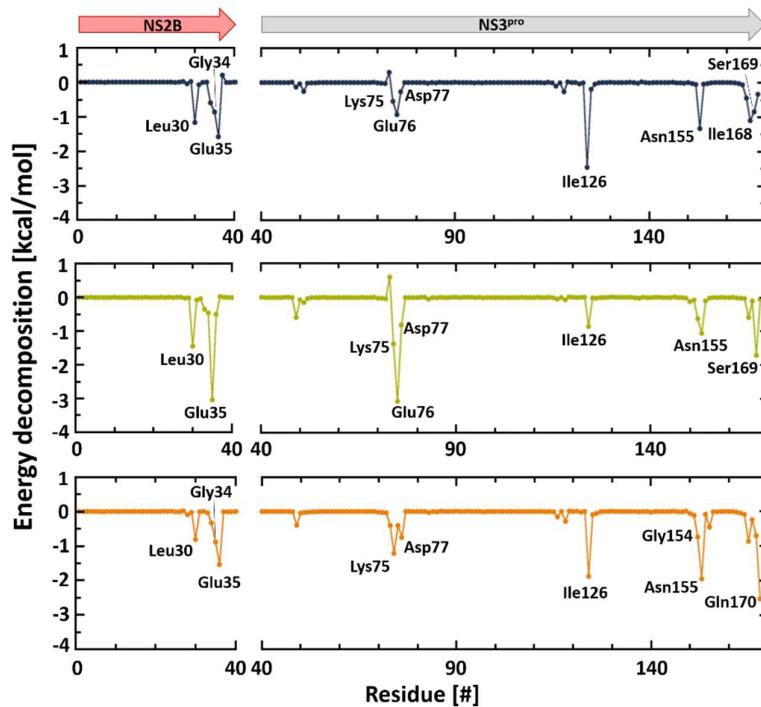

**Figure S9. Time dependent modifications of the YFV NS2B/NS3<sup>pro</sup>-riboflavin complex.** NS2B (blue), NS3pro (orange) and riboflavin (dark grey). RMSD, RMSF, RoG and surface area as function of time. RMSF for each amino acid. **(A)** replicate one, **(B)** replicate two and **(C)** replicate three.

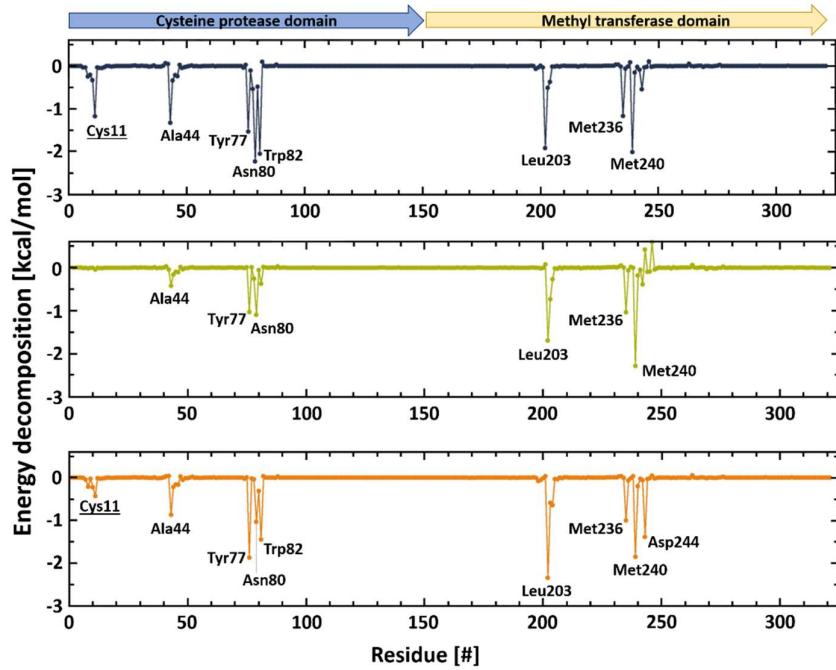

**Figure S10.** Time dependent modifications of the CHIKV nsP2<sup>pro</sup>-riboflavin complex. CHIKV nsP2<sup>pro</sup> (dark grey (A), green (B) and orange (C)) and riboflavin (grey). RMSD, RMSF and surface area as function of time. RMSF for each amino acid. **(A)** replicate one, **(B)** replicate two and **(C)** replicate three.

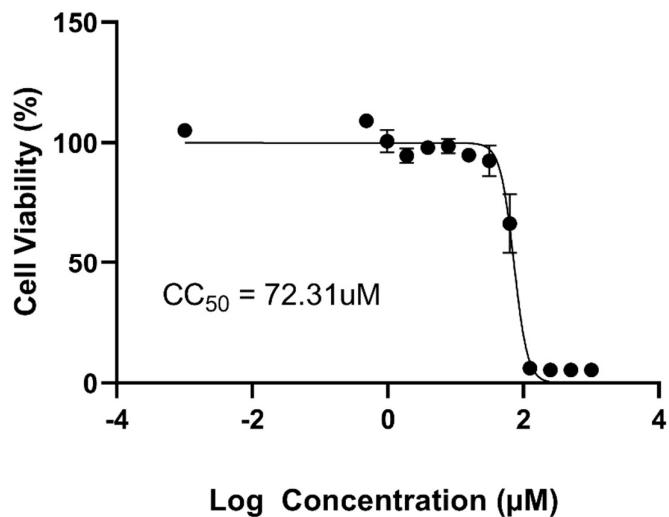

**Figure S11.** Decomposition of the binding energy of ZIKV NS2B/NS3<sup>pro</sup>-riboflavin complex of three independent replicas. NS2B and NS3<sup>pro</sup> are labelled by arrows. The amino acid residues involved in the interaction with riboflavin are labelled with name and sequence number.

**Figure S12.** Decomposition of the binding energy of YFV NS2B/NS3<sup>pro</sup>-riboflavin complex of three independent replicas. NS2B and NS3<sup>pro</sup> are labelled by arrows. The amino acid residues involved in the interaction with HST are labelled with name and sequence number.

**Figure S13. Decomposition of the binding energy of CHIKV nsP2<sup>pro</sup>-riboflavin complex of three independent replicas. NS2B and NS3<sup>pro</sup> are labelled and by arrows. The amino acid residues involved in the interaction with riboflavin are labelled with name and sequence number.**

**Figure S14. Cytotoxicity assay of riboflavin against vero cells.** Vero Cells were treated with concentrations of the molecule ranging from 1000 to 0.48  $\mu\text{M}$  for 48h and the cytotoxic concentration of 50% ( $\text{CC}_{50}$ ) were determined. Cellular viability measured using an MTT assay. Mean values of three independent experiments each measured in quadruplicate including the standard deviation are shown.

**Table S1.** Virus protease amino acid residues forming hydrogen bonds and hydrophobic interaction with riboflavin.

| Virus protease | Hydrogen Bonds                           |                                     |              | Hydrophobic interaction   |
|----------------|--|-------------------------------------|--------------|---|
|                | Protease Residue/Atom<br>(Donor/Aceptor) | Riboflavin atom/<br>(Donor/Aceptor) | Distance [Å] |   |
