### Doing Experimental Psychological Research from Remote: How Alerting Differently Impacts Online vs. Lab Setting

Fiorella Del Popolo Cristaldi, Umberto Granziol, Irene Bariletti, Giovanni Mento

**Table S1.** Fixed and random effects resulting from the Linear Mixed-effects Model (LMM) on the log-transformed reaction times (log-RT): estimates (in logit scale), standard error (SE), 95% confidence interval (CI), statistics (*t*-value), *p*-values (*p*) and degrees of freedom (*df*) are reported. Bold *p*-values signal statistical significance. The marginal and conditional R<sup>2</sup> are also reported. SOA = Stimulus Onset Asynchrony
