

Supplementary Materials: Relationships of *Brassica* Seed Physical Characteristics with Germination Performance and Plant Blindness

Pedro Bello and Kent J. Bradford

Table S1: CF-Analyzer, VideometerLab , Q2 parameters and greenhouse parameters for all stages of the study.

[Full data file download link.](#)

Table S2: Q2 parameters. Seed respiration values calculated for control seeds at 20 and 15 °C and blindness-induced seeds at 15 °C.

Variety	Seed Lot	Control seeds - 20 °C- 72 hours																O ₂ levels at time points					
		75% O ₂ values				50% O ₂ values				25% O ₂ values				O ₂ @ 48 h		O ₂ @ 72 h							
		R75		AUC75		R75 POD curve		R50		AUC50		R50 POD		R25		AUC25		R25 POD		Mean	SD	Mean	SD

Table S3: Eigenvalues and percentage of explained variance from the multiple factor analysis of selected list of parameters exhibiting correlation to blindness.

Dimension/ Component	Eigenvalue	Percentage of variance	Cumulative percentage of variance
1	5.435778	57.86%	57.86%
2	1.342053	14.29%	72.15%
3	0.842101	8.96%	81.11%
4	0.622046	6.62%	87.73%
5	0.492336	5.24%	92.97%
6	0.375554	4.00%	96.97%
7	0.129190	1.38%	98.35%
8	0.094251	1.00%	99.35%
9	0.039180	0.42%	99.77%
10	0.017044	0.18%	99.95%
11	0.004833	0.05%	100.00%

Figure S1: Brassica control seed respiration curves at 20 °C. Oxygen depletion curves for 46 individual seeds of each kohlrabi F1 Variety (columns) and seed lot (rows) tested at 20 °C for 72 h. Dashed lines represent the median (red) and average (black) oxygen depletion time courses for the entire seed population.

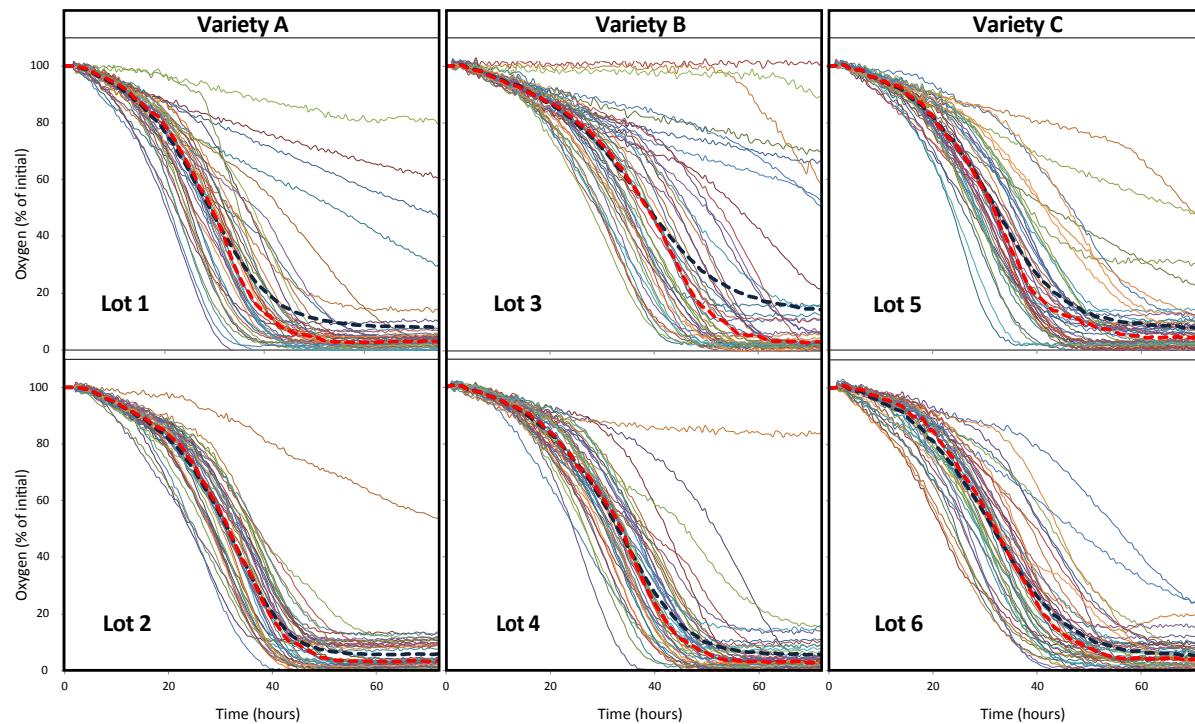

Figure S2: Brassica control seed respiration curves at 15 °C. Oxygen depletion curves for 46 individual seeds of each kohlrabi F1 Variety (columns) and seed lot (rows) tested at 15 °C for 50 h. Dashed lines represent the median (red) and average (black) oxygen depletion time courses for the entire seed population.

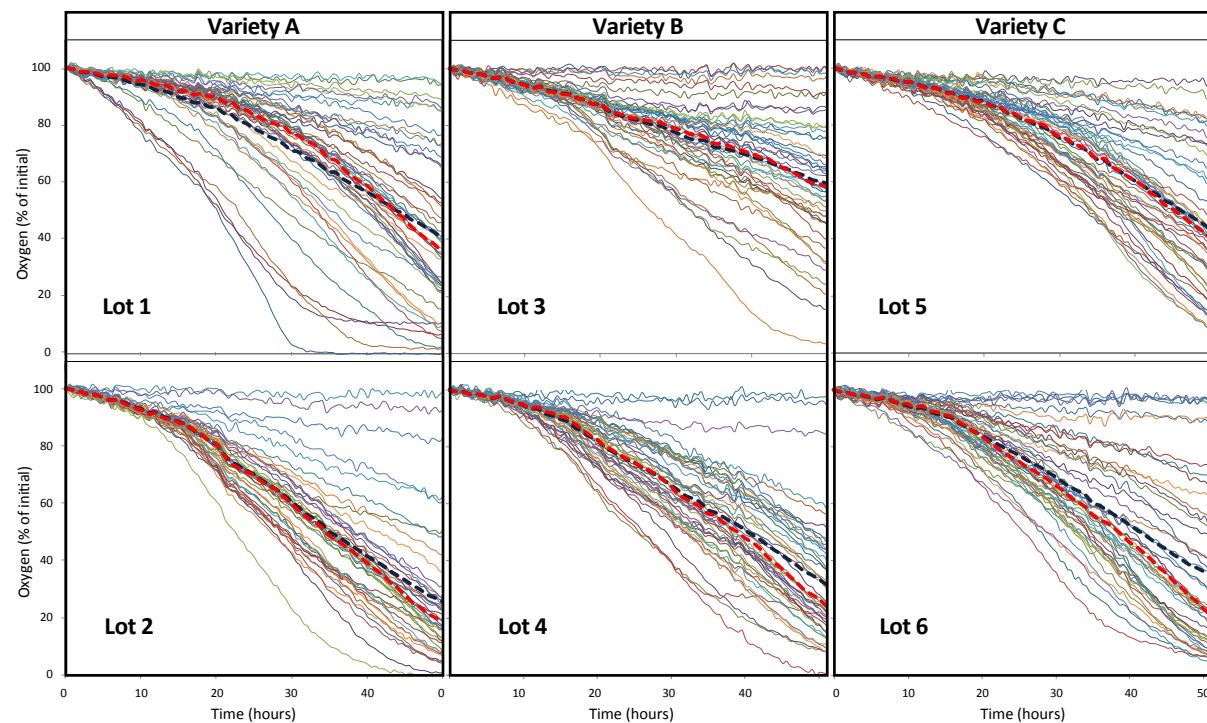

Figure S3: Pearson correlation matrix of selected parameters from the CF Analyzer (rows and columns 1-2, dashed green), the VideometerLab (rows and columns 3-40 and 46, dashed purple) the Q2 respirometer (rows and columns 41-45, dashed orange) and greenhouse tests (rows and columns 47-48) (Table 1) for all seeds. Parameters are also organized in the order they were captured in the different stages of the study: dry seeds (rows and columns 1-30, brown bars), after the blindness induction (rows and columns 31-40, red bars), induced seeds during germination (rows and columns 41-46, orange bars) and in the greenhouse (rows and columns 47-48, green bars). The Pearson correlation coefficients between the row and column parameters are graphically displayed as circles; their size and color shadings indicate the strength of the correlation coefficients from 0 to 1 for a positive relation (blue color) or 0 to -1 for a negative relation (red color) (only correlation coefficients with significance level for p values below 0.01 are displayed).

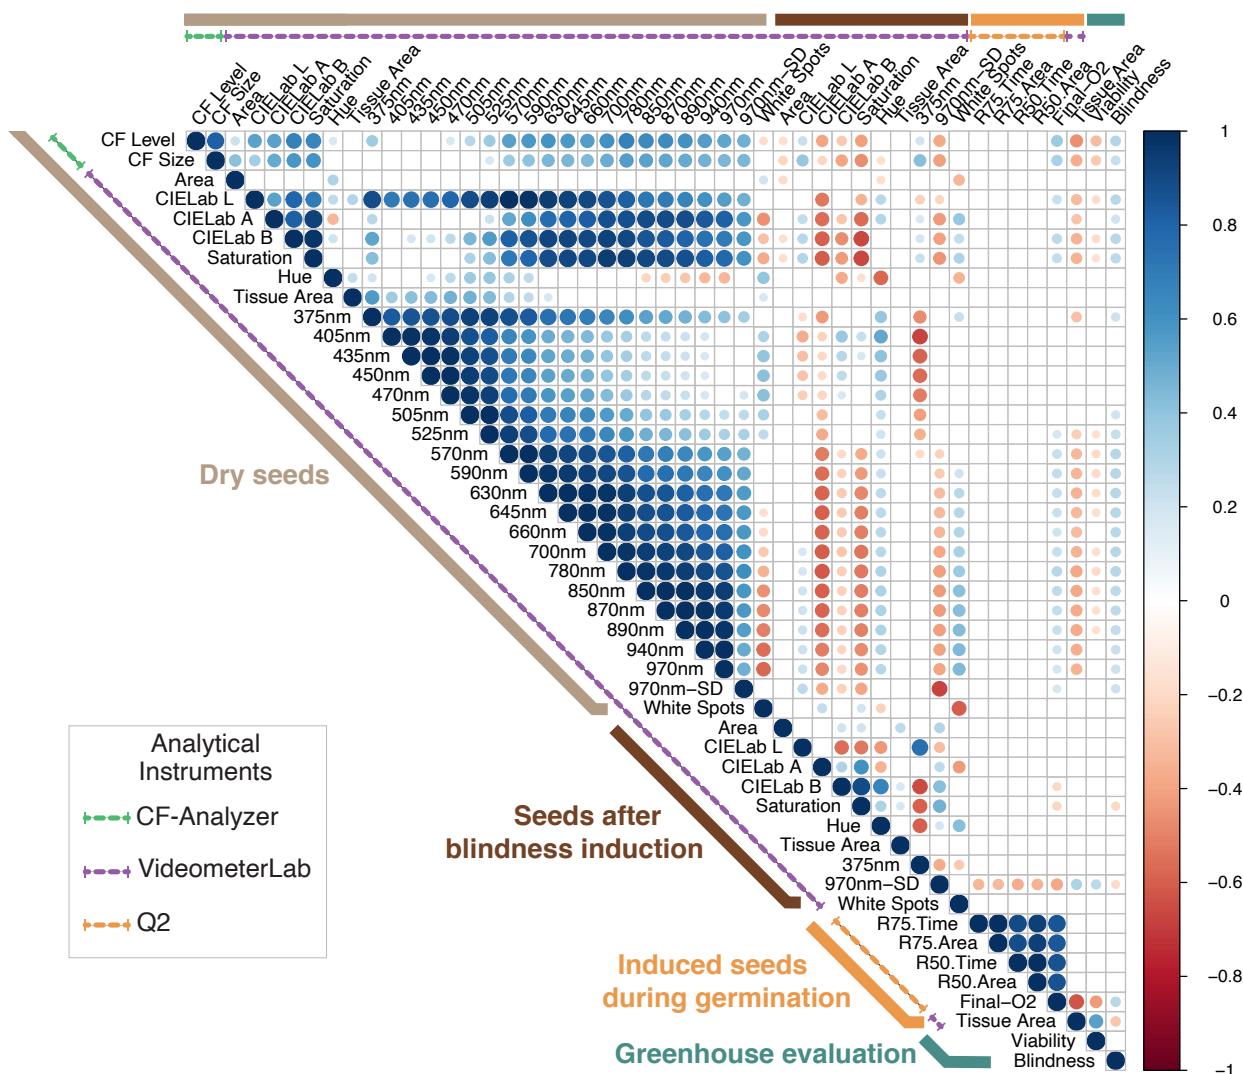

Figure S4: Full Pearson correlation matrix with most parameters from analytical equipment used here (CF-Analyzer, VideometerLab and Q2) and greenhouse measurements for stages of the study.
