**Figure S1:** Squared allele-frequency correlations ( $r^2$ ) plotted against physical distance (mega base pairs, Mbp) in the UMN\_C4 intermediate wheatgrass population. The decline of linkage disequilibrium is shown by plotting the LOWESS curve in blue color.

**Figure S2:** QQ-plots generated by FarmCPU model during genome-wide association scan for significant SNP markers. **A:** Height (cm), **B:** Seed length (mm), **C:** Seed width (mm), **D:** Shattering, **E:** Threshability, **F:** Thousand kernel weight (TKW, g)
