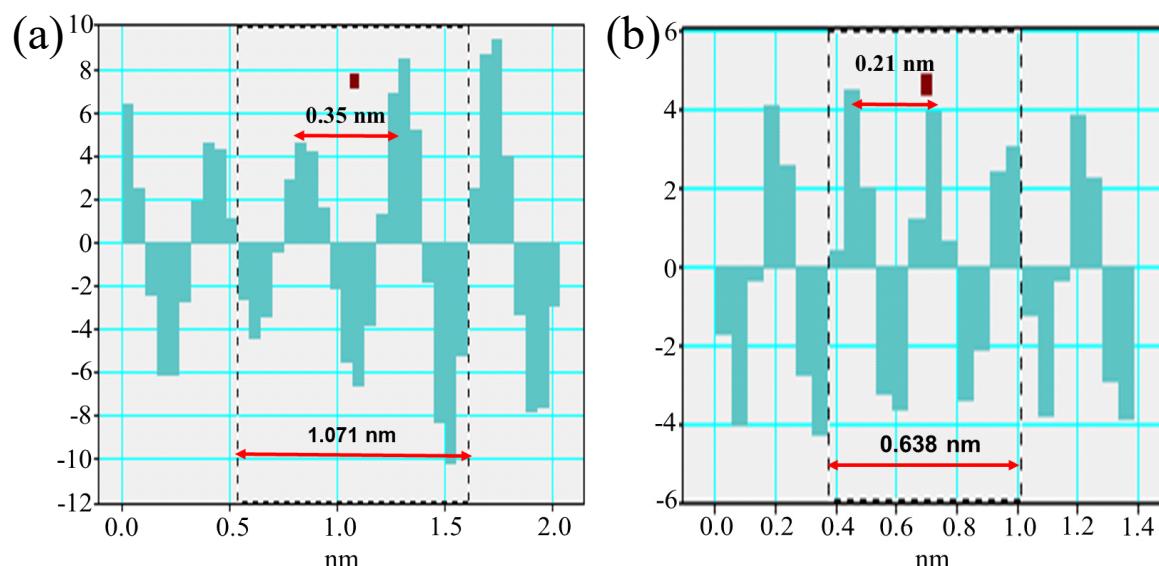

Figure S1. Lattice spacings of (a) pure HPB and (b) Er 10-GQD/HPB.

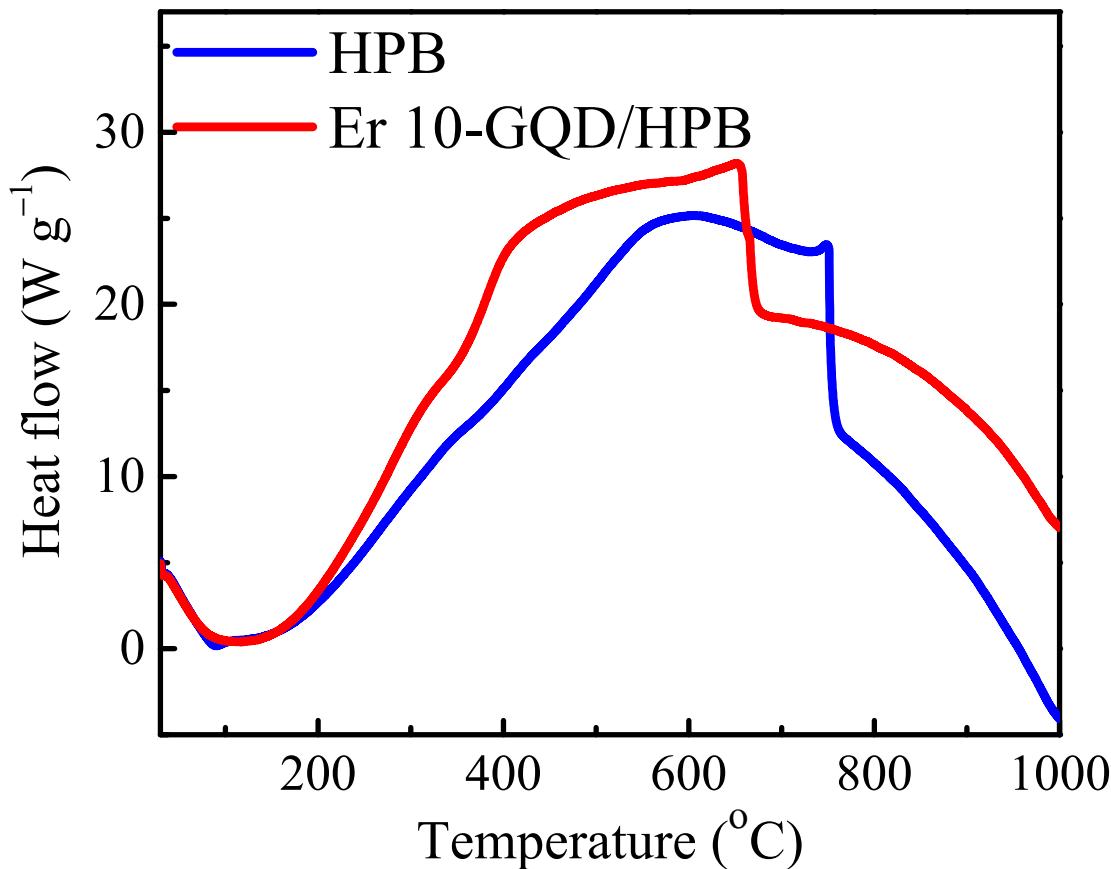

Figure S2. The differential scanning calorimetry (DSC) of HPB and Er 10-GQD/HPB.

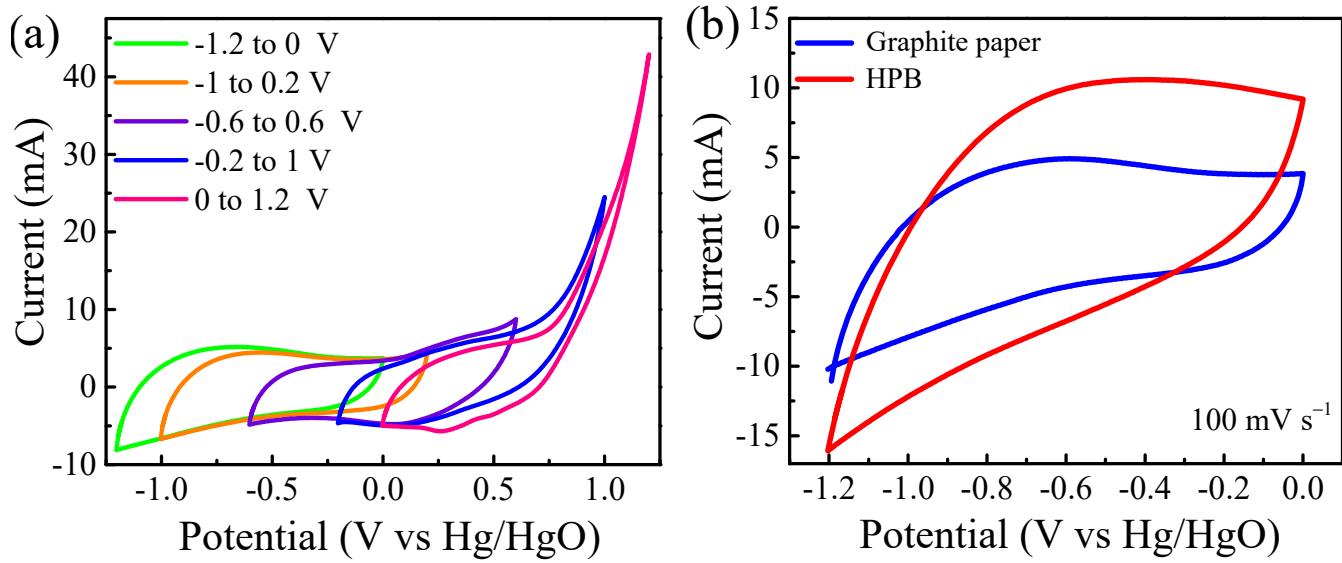

Figure S3. CV curves of (a) graphite paper and (b) HPB and graphite paper at 100 mV s^{-1} in different voltage windows of $-1.2\text{--}1.0 \text{ V}$.

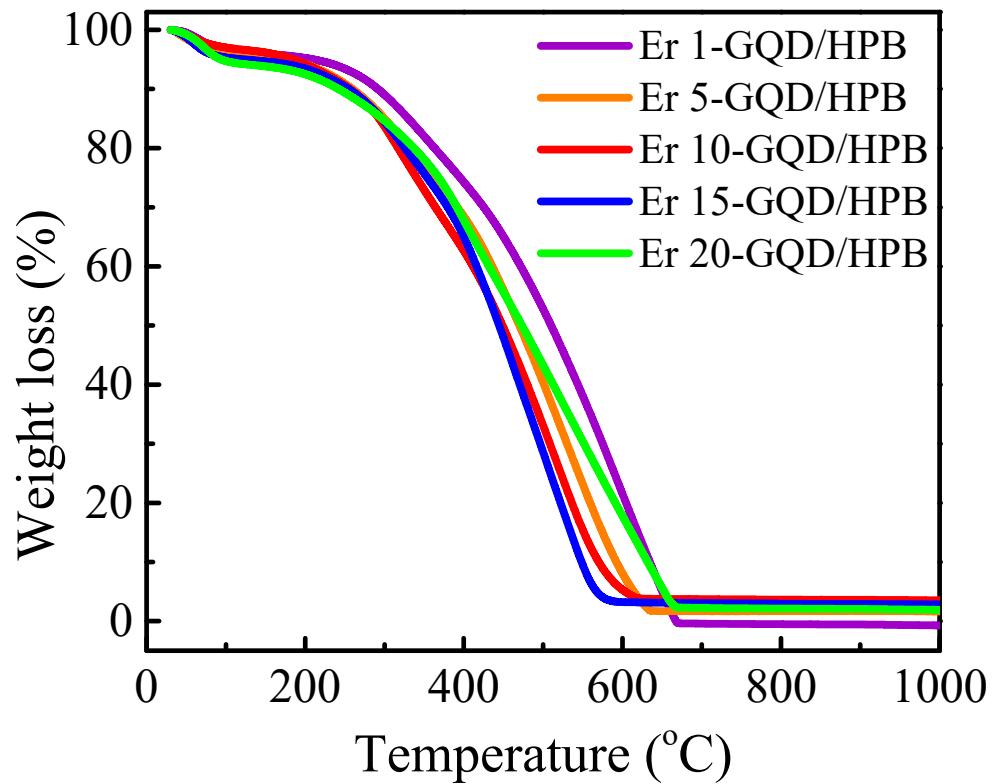

Figure S4. TGA curves of Er-GQD/HPB nanocomposite in various Er loading from 1 to 20 mM.

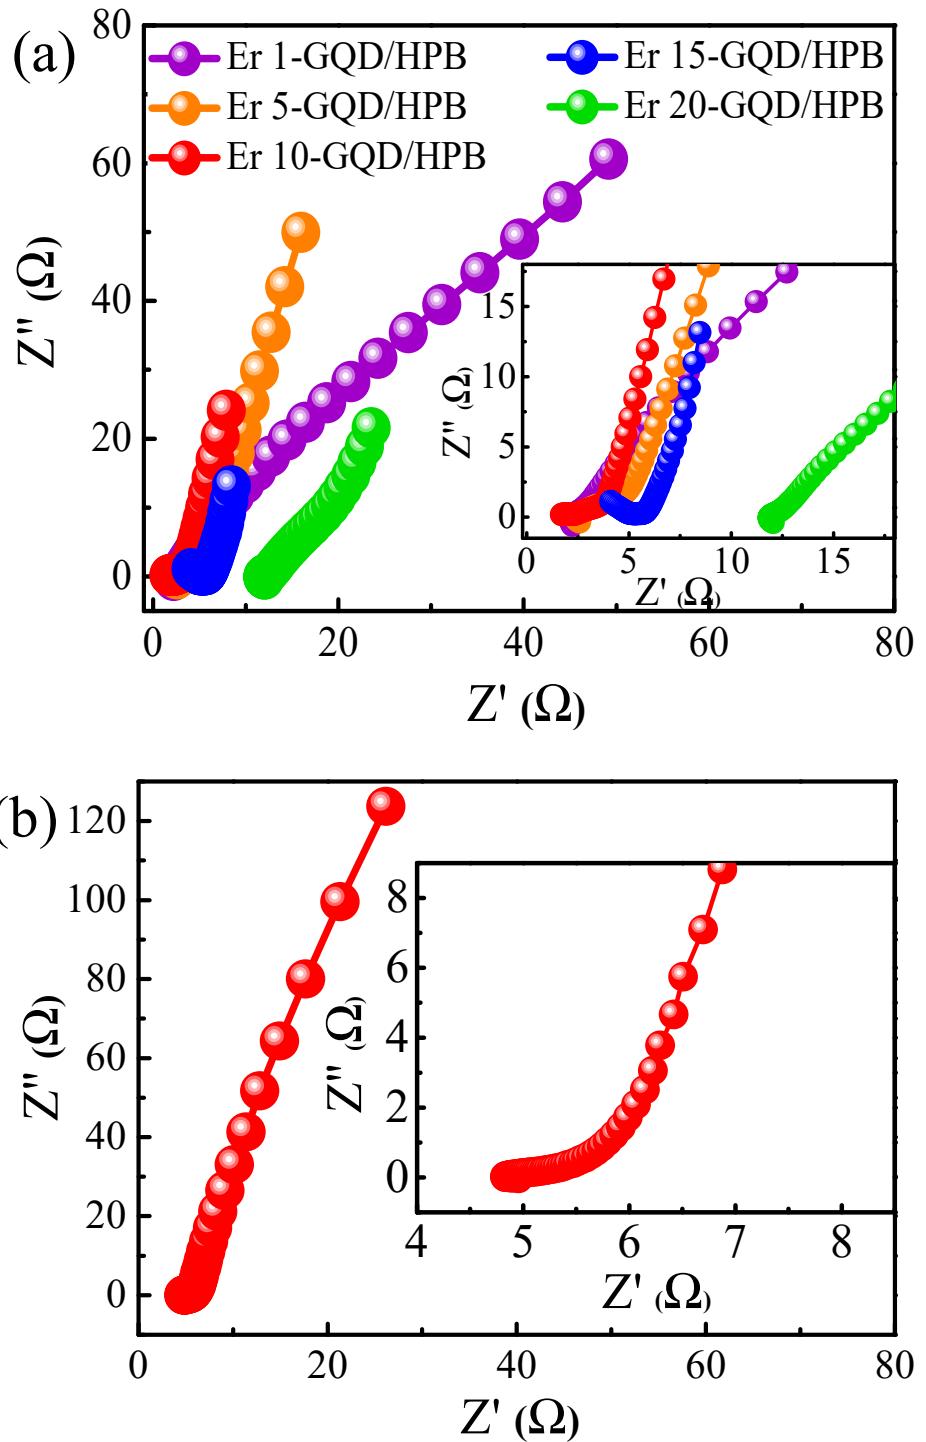

Figure S5. Nyquist plots of (a) Er-GQD/HPB at different Er loadings of 1–20 mM and (b) pure HPB.

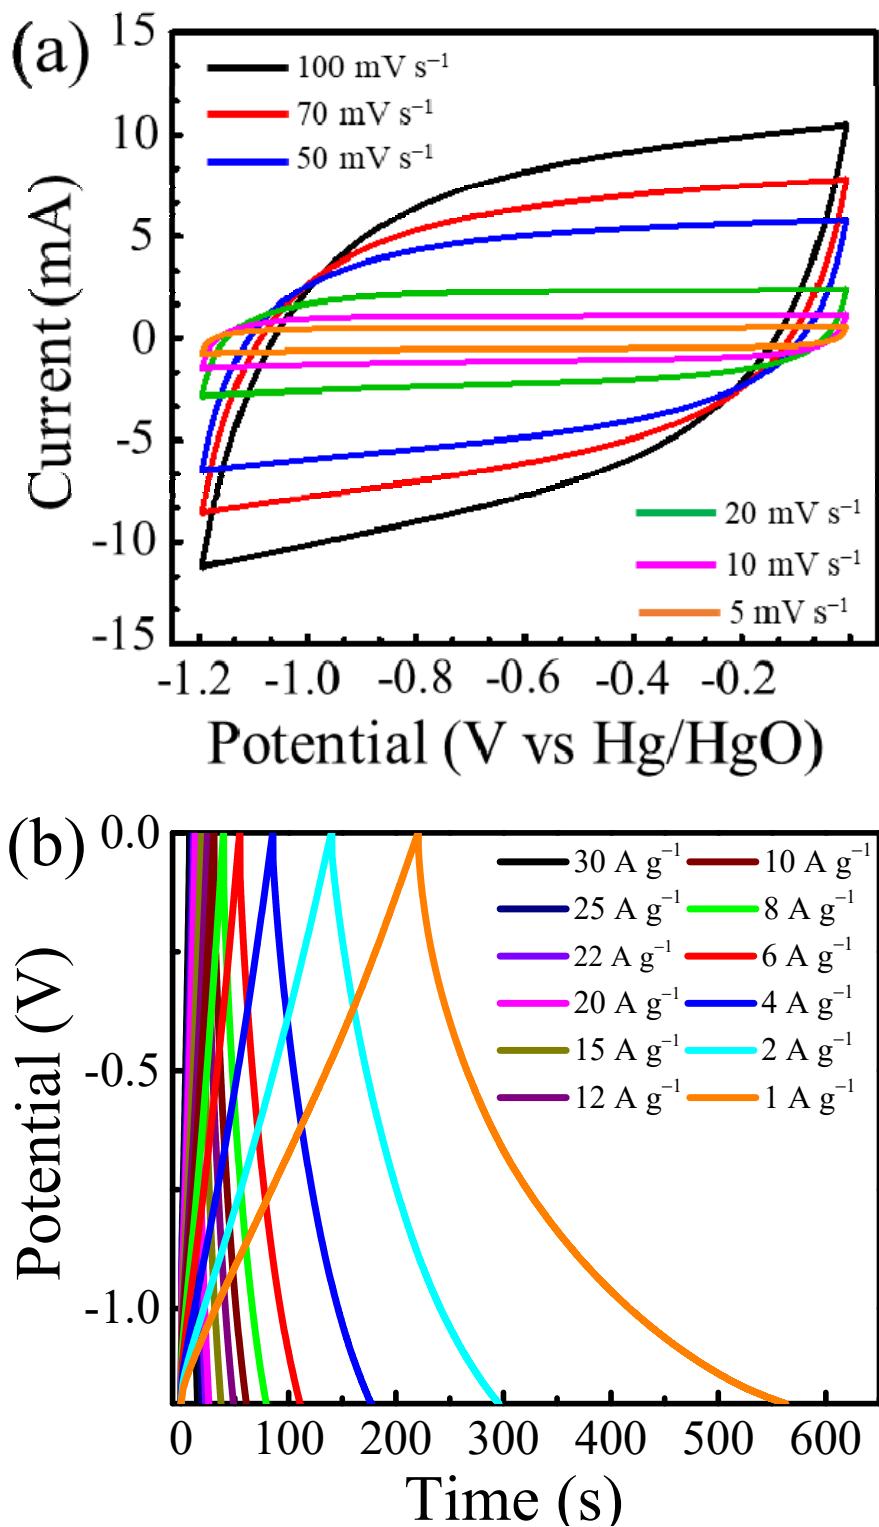

Figure S6. (a) CV curves and (b) GCD of pure HPB.

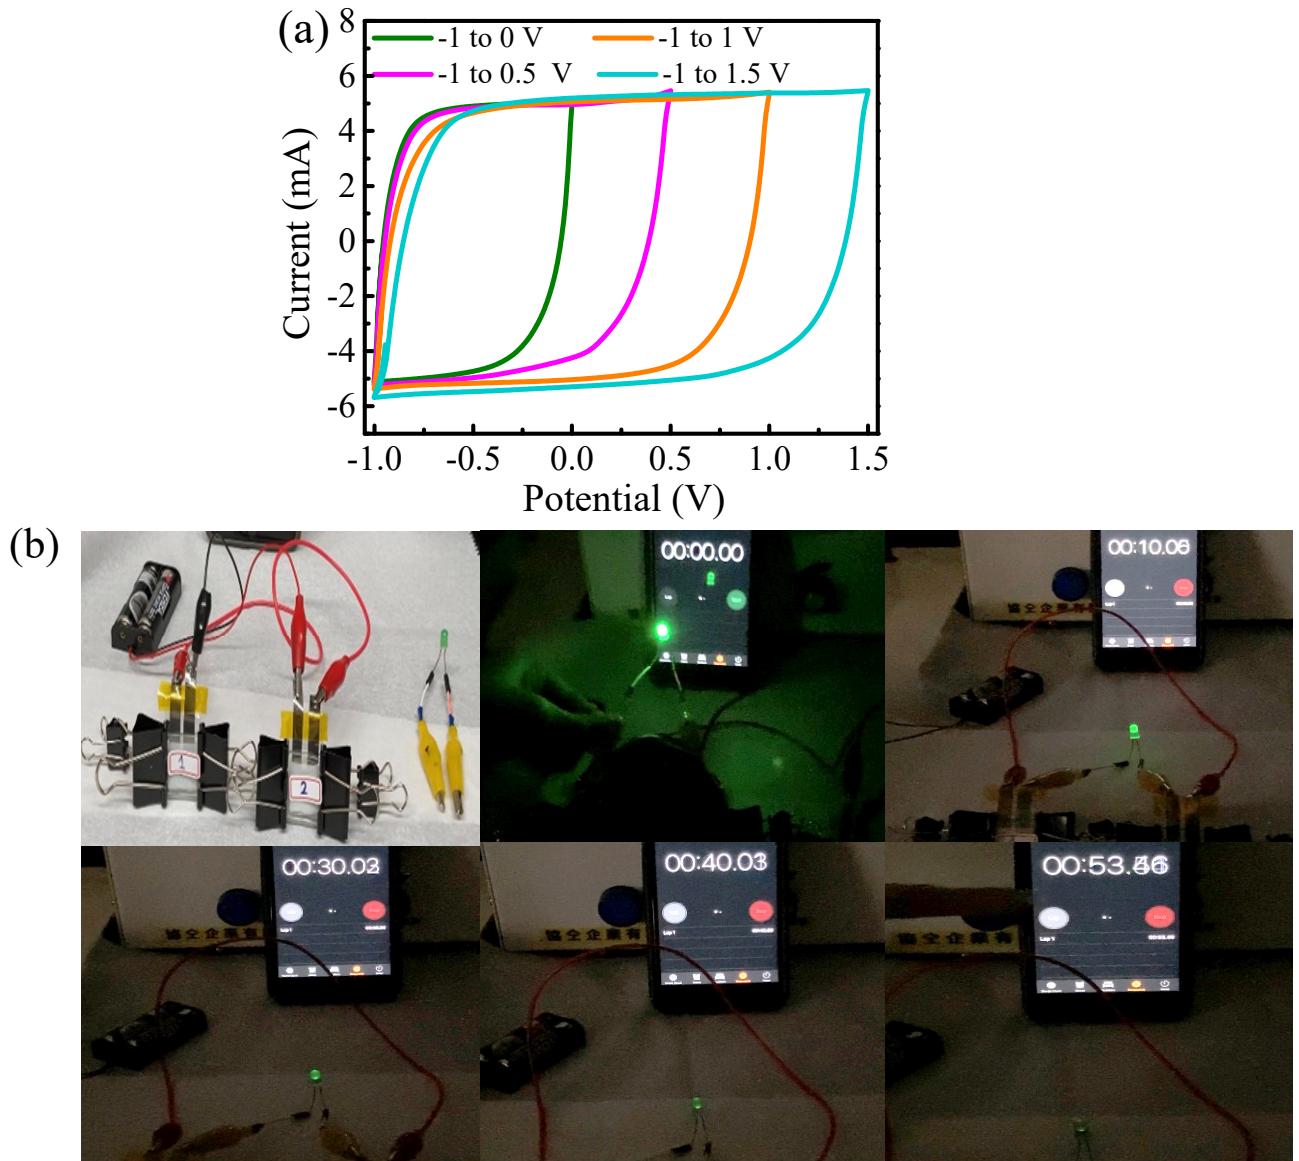

Figure S7. (a) CV curves of $\text{Er}^{10}\text{-GQD}/\text{HPB} \parallel \text{HPB}$ in different voltage windows at 100 mV s^{-1} and (b) demonstration of lighting of LED powered by $\text{Er}^{10}\text{-GQD}/\text{HPB} \parallel \text{HPB}$.
